

BRIEFING YOU

about our

Field School for Quaternary Palaeoanthropology and Prehistory of Murcia, S.E. Spain

25th Anniversary Season 2014

Michael J. Walker

*Department of Zoology and Physical Anthropology,
Biology Faculty
Murcia University,
30100, MURCIA (SPAIN)
email: mjwalke@gmail.com (or: walker@um.es)
fax: 34-868-883963*

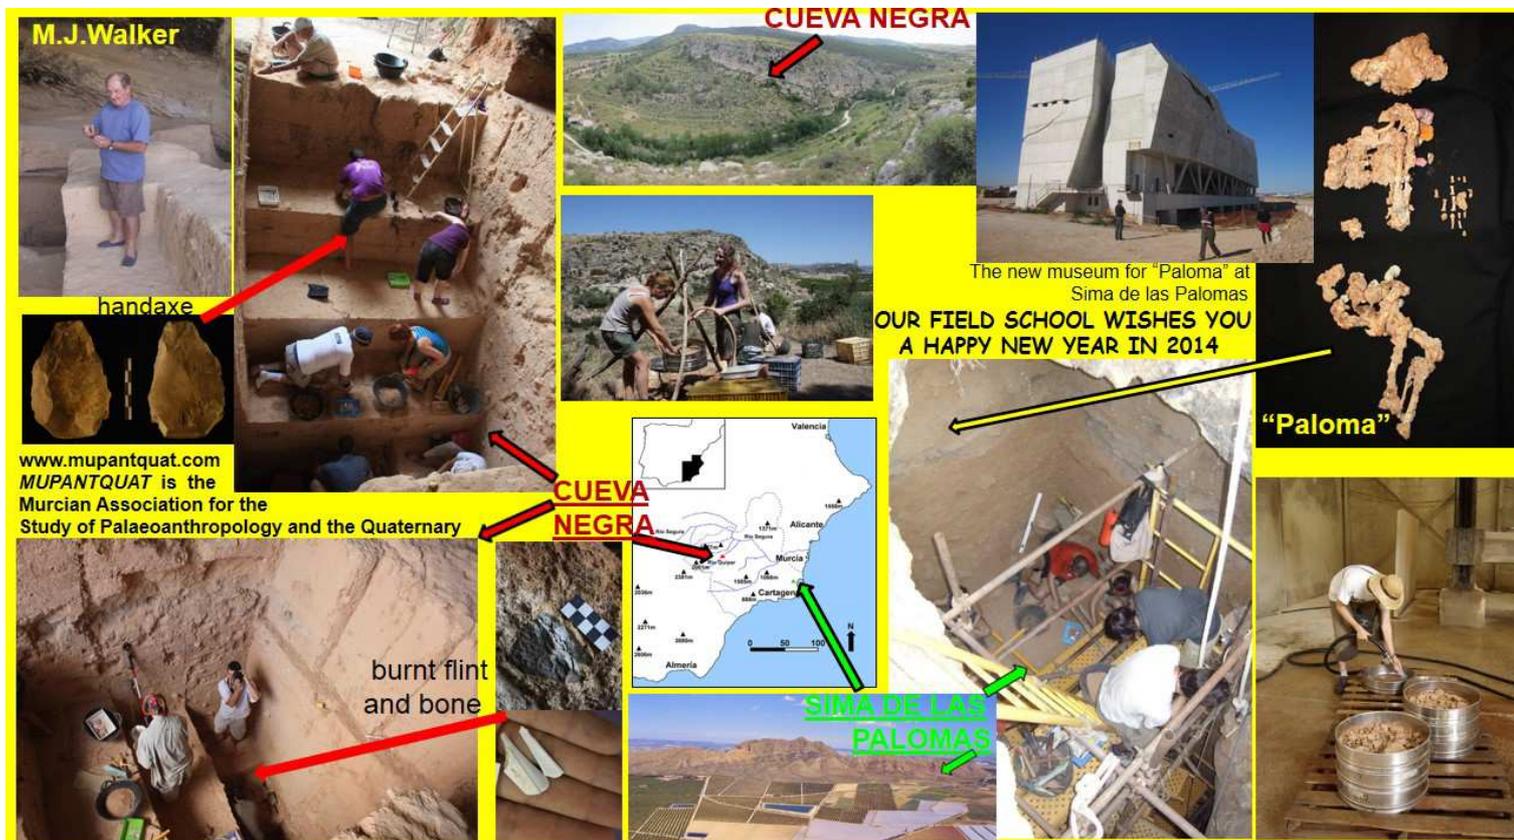

Dates of our 2014 sessions:

**SESSION 1 : July 1st (Tues.) – July 22nd (Tues.) 2014
at Cueva Negra del Estrecho del Río Quípar**
**SESSION 2 : July 22nd (Tues.) –August 12th (Tues.) 2014
at Sima de las Palomas del Cabezo Gordo**

ABSTRACT

The main objective of the research project is to increase the finds of Pleistocene hominin fossils, along with stone tools and prehistoric animals, by excavation at two sites, **Cueva Negra** (*Black Cave*) del Estrecho del Río Quípar de La Encarnación and **Sima de las Palomas** (*Dove Hole*) del Cabezo Gordo de Dolores de Pacheco, in the Spanish province of Murcia. A secondary objective is to compare and contrast how Neanderthal folk and their *H. heidelbergensis* forebears used natural resources near to the sites, which are in very different local environments. The results will be of importance in developing research into fossil man of the ice age in Mediterranean Spain. Fieldwork since the early 1990's has very significantly increased the numbers of Pleistocene hominin remains from both sites, as well as the Middle Palaeolithic stone tools and Middle-early Late Pleistocene faunal remains. The results are greatly helping to extend our knowledge about *H. heidelbergensis* and *H. neanderthalensis*, their origins and their lifeways.

WE'RE GOING FROM STRENGTH TO STRENGTH IN 2014 !

MESSAGE TO ENQUIRING PROSPECTIVE FIELD SCHOOL HELPERS

Michael J. Walker

Emeritus Professor of Physical Anthropology,
Departamento de Zoología y Antropología Física,
Facultad de Biología, Universidad de Murcia
Campus Universitario de Espinardo (Edificio 20),
30100 Murcia, Spain

January sixth, 2014

Dear Enquirer,

I want to welcome you to take part in our Field School which celebrates its 25th Anniversary in 2014. I'm sure you'll have an interesting time, especially if you're interested in human evolution and our hominin ancestors.

You may very well be as lucky as some recent participants who have helped to excavate hominin bones and teeth during the course of their stay with us. The most recently found are Neanderthal bones, still in their original state of anatomical articulation of the chest, shoulder girdle and upper limb, and of the pelvic girdle, leg and foot, which belong to maybe three individuals, perhaps crushed by a rock-fall or perhaps intentionally arranged and covered with rocks, which we have been uncovering at *Sima de las Palomas* since 2005 and which date to between 55,000 and 40,000 years ago. Some of them our helpers it was the most exciting thing they had ever done. Several of them knew very little about human evolution or how we excavate at prehistoric sites when they arrived, and went away thrilled and having picked up a great deal of both knowledge, not to mention Neanderthal human remains! There is also great excitement at *Cueva Negra* which lately has been recognized as a very much older site than we had thought it was. In its sedimentary fill we have recovered numerous teeth of fossil rodent species known from several sites in Spain after 1,000,000 years ago that became completely extinct long before 500,000 years ago. We have also excavated an Acheulian hand-axe associated with flakes struck by the so-called Levallois technique and stone tools with abrupt Mousterian-like retouch. Palaeomagnetic research undertaken by the Berkeley Geochronology Center shows that the sedimentary fill is older than 780,000 years ago. Palaeontological and palaeopalynological research suggest an age of 800-900,000 years ago. This early date means that *Cueva Negra's* six early Neanderthal-size teeth are best seen as belonging to the Neanderthal precursor in Europe called *Homo heidelbergensis*. In 2011 we began to find calcined animal bones and burnt chert 4.5 metres down in the sediment, which give us the oldest evidence for fire in Europe found to date (in Africa there is evidence from before 1,000,000 years ago). The 2012 and 2013 field seasons have found more evidence still of this astounding discovery.

If you go to our <http://www.mupantquat.com> web-site, which is now working well after a few glitches in 2013, you will find, and should open, study, and save, a long document entitled *BRIEFING YOU* which tells you how the Project got started and where we're at right now. As you'll see, since the Project began in the early 1990's we have found a large number of remains of hominin and animal bones, and the stone tools of Pleistocene hominins.

The Project is carrying out excavations at two sites in Murcia province, S.E. Spain which date from between 900,000 and 40,000 years ago, and are called:

Cueva Negra (Black Cave) del Estrecho del Río Quípar de La Encarnación, and
Sima de las Palomas (Dove Hole) del Cabezo Gordo de Dolores de Pacheco.

The dates when we shall be at each site are as follows:

SESSION 1: July 1st (Tues.) – July 22nd (Tues.) 2014 at *Cueva Negra del Estrecho del Río Quípar*

SESSION 2: July 22nd (Tues.) – August 12th (Tues.) 2014 at *Sima de las Palomas del Cabezo Gordo*.

We start and finish on Tuesdays because from London there are both Ryanair flights (from Luton and Stansted) and Easyjet (from Gatwick) on weekdays – as well as many other low budget flights by other airlines (see FIELD LOGISTICS), and also connecting Iberia-Air Nostrum flights from Madrid and Barcelona on weekdays - but not at weekends - for intercontinental travellers arriving in Spain (e.g. from U.S.A.).

I think the best thing you can do now is to find and read *BRIEFING YOU* very carefully, and then make up your mind. If you have any queries, please don't hesitate to write to me.

Very important! Please send me, as soon as you can, details about your route, place, date, and time of arrival so that we know you are definitely arriving so as to put you on our list of people to be picked up at Murcia-San Javier Airport (or at Calasparra railway station for Cueva Negra) – or else so that we know you are NOT to going to be picked up by us if you are coming under your own steam or on other days. This is very important for you and for me!

I look forward to seeing you in Spain in the Summer of 2014,

Yours truly

Michael J. Walker

**EXCAVATING AT CUEVA NEGRA DEL ESTRECHO DEL RÍO QUIPAR AND SIMA DE LAS PALOMAS DEL CABEZO GORDO
FIELD SCHOOL AND RESEARCH PROSPECTS FOR 2014**

Michael J. Walker

January sixth, 2014

Dear Helpers, Friends, Colleagues and Supporters,

Together with my co-directors of excavation Mariano López and María Haber, and our young graduate staff Antonio López, Ignacio Martín, Jon Ortega, Azucena Avilés and Ángel Buitrago, I write thanking you for your past help, interest and support, and to inform any who have never been here about what we are doing. Our helpers contribute to our success. Our web-site is being brought up to date and with luck will be ready by the beginning of January if not before. Meanwhile, I attach our 2014 poster advertisement and our 2014 BRIEFING YOU to keep you up to date on our work and prospects for the 25th Anniversary of our excavations and Field School in 2014.

In June 2012, at the Murcia regional government official Registry, we registered officially the creation of the *Murcian Association for the Study of Palaeoanthropology and the Quaternary* or MUPANTQUAT (*Asociación Murciana para el Estudio de la Paleoantropología y del Cuaternario*) which will extend our work but it is also responsible for organizing our 2014 Field School and excavations (MUPANTQUAT email <mupantquat@gmail.com> <info@mupantquat.com> and web-site <<http://www.mupantquat.com>> which is now working well, after we corrected one or two glitches that plagued it in 2013). MUPANTQUAT is also finalizing the English and Spanish editions of a semi-popular book about our two decades of excavation at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar. The English version is now with the U.K. publisher Oxbow that expressed an interest in it. We have proposed a self-explanatory title: "HOW THE EARLIEST CAVE-FOLK OF SOUTH-EAST SPAIN WERE DUG UP". Our association itself will be the publisher of our Spanish edition here at Murcia. A Murcia regional government foundation has made an animated film about, and called simply, "CUEVA NEGRA"; our association and the foundation are taking it around our region for showings in different towns and cities, and after the showing there is a scientific colloquium in which we take part by giving brief talks and answering questions from the audience. We appeared in the PBS-NOVA television documentary "Decoding Neandertals" that was shown in January 2013 in the USA.

A lot is happening! Excavations at Cueva Negra and Sima de las Palomas have given us evermore startling finds in the past few years. At Sima de las Palomas we have uncovered articulated skeletal remains in anatomical connexion of two Neanderthal adults with a child, covered by rocks in the cave 55-45,000 years ago (the last articulated adult Neanderthal to be excavated was way back in 1976, at St.Césaire in France). Researching for his PhD, Jon Ortega is doing brilliant work in our lab, cleaning and identifying the bones in the cemented breccia masses we have excavated. In 2011 we acquired vibroscalpels (so-called "air-scribe" tools) powered by a small compressor to facilitate the cleaning. We now also use Murcia University Veterinary Hospital's new scanner to visualize human bone remains in the breccia masses and to record the digitalized images for analysis and virtual reconstruction. We are grateful to Professor Christoph Zollikofer and Dr. Marcia Ponce de León who came over from Zürich University to show us how they carry out such research there and who also most kindly invited Jon and me to visit their Zürich laboratories in 2011. In Autumn 2012 Jon spent several weeks at Zurich "boning up", so to speak, on their IT methodology. In September 2012 I presented a poster on behalf of us all about this research on the Sima de las Palomas Neanderthals at the 2nd Annual Meeting at Bordeaux of the recently formed European Society for the Study of Human Evolution, which attracted great interest, and the poster was shown again in April 2013 accompanying a talk about the Sima de las Palomas Neanderthals that I was invited to give at the 55th Annual Meeting of the international Hugo Obermaier Society for Quaternary Research and Archaeology of the Stone Age, held at Vienna's grand Natural History Museum.

To help us study the skeletons, in January 2011 the eminent Anthropology Professor Erik Trinkaus came over here from Washington University at St.Louis. Thanks to his invaluable collaboration we have now published a second paper on Sima de las Palomas Neanderthal remains in the *Proceedings of the National Academy of Sciences of the USA*, two papers (with another in press) in the *American Journal of Physical Anthropology*, and a third in the *Journal of Dental Research*, and we also published a long paper in *Quaternary International* in 2012 about how we excavated the Neanderthal skeletons.

To house our spectacular Neanderthal skeletons a 5-storey museum has been built below Sima de las Palomas (in September 2010 the Chairman of our Regional Government in Murcia laid its foundation stone). I visited the finished building early in January 2013 with the architect, but it now needs fitting out as it is a concrete shell right now. Work on the interior is scheduled to begin early in 2014, I am informed.

Inside Cueva Negra, at a depth of 4.5 metres down in the sedimentary fill, we uncovered calcined bone and burnt chert during our 2011, 2012 and 2013 field seasons of excavation in sediment that appears to have been altered by heat. This is the oldest evidence for fire in Europe found to date at any Palaeolithic site (though in Africa there is evidence from before 1,000,000 years ago). The temperature reached 550°C according to spectrometry analyses of the burnt bone and chert, which have been undertaken by Dr Anne Skinner at Boston's Williams College using electron spin resonance methods, and Dr Francesco Berna at Simon Fraser University using Fourier-transform infra-red techniques with which he carried out postdoctoral research at Boston University under the guidance of the distinguished geoarchaeologist Professor Paul Goldberg who developed the method there. Dr Berna's friend, geoarchaeologist Dr. Diego Angelucci of the Italian University of Trento, has studied the micromorphology of thin sections he took at Cueva Negra with his PhD student Daniela Anesin (see *Quaternary Science Reviews*, 10.1016/j.quascirev.2013.09.009).

The astonishing antiquity of Cueva Negra has greatly excited Anthropology Professor Tom Wynn of the University of Colorado at Colorado Springs. He is a world authority on what Acheulian and Levallois

knapping techniques can tell us about the evolution of cognition in hominins (two of his students helped in our 2011 excavation season). Until now nobody had ever imagined that the Levallois reduction technique in Europe could be as old as we are finding it to be at Cueva Negra, and to have both Acheulian and Levallois techniques at our site is intriguing. Tom is one of three editors of a 2009 Cambridge University Press book on the evolution of human cognition, *Cognitive Archaeology And Human Evolution* which has a chapter by me about the significance of the Cueva Negra lithic assemblage. Another editor is Tom's colleague Professor Fred Coolidge, whom it was a pleasure to meet again at the Bordeaux meeting in September 2012. We have now published more about the significance of the Cueva Negra Palaeolithic artifacts in *Quaternary International* (vol. 294, pp. 135-159, 2013).

We are now beginning to determine the natural chert sources exploited by the Cueva Negra hominins, thanks to collaboration at Arizona University, where its recent anthropology graduate Winston Zack, who spent three field seasons here, submitted many samples he took, from both the site itself and chert outcrops in its vicinity, to Dr. Alex Andronikov at AU's Lunar and Planetary Sciences Laboratory who has conducted spectroscopic analysis of rare-earth trace elements in the cherts. The findings are in press with the journal *Quartär* (vol. 60 for 2013, which will be in print early in 2014).

Alas, I cannot enter into correspondence with everyone individually, even when you write to me with specific enquiries about the progress of our research. Hundreds of people have attended our Field School over the past two decades, and because I have no secretary I cannot answer scores of letters separately. So that is why I am sending you this round-robin letter. One size will just have to fit all, I am sorry to have to say. The snippets offered below will have to suffice, together with what will be put up on the website (especially in "Briefing You"), even if they only serve to whet your appetite for more! You will appreciate, I feel sure, that it is one thing for me to correspond about ongoing unpublished research with the handful of established scientists who collaborate with our project, but it would be an unethical and improper thing for me (or them) to do if we were to enter into correspondence about unpublished new business people who are not directly involved in the scientific development and elaboration of those particular research matters. Their eventual publication must be awaited with your patience - even though it may have to last for a few years.

All the same, I do try to go out of my way to answer enquiries from those graduate helpers who are now doctoral candidates at universities around the world, when from time to time they write to me enquiring about highly specific scientific matters concerning their own research which have occurred to them in relation to knowledge they acquired when working at our sites.

Also, when undergraduate students want to come as helpers, and enquire about how to use their experience to gain credit from their own colleges or universities, because we ourselves have no structure for giving them such credit, I do want you to know that if your own college professors are willing to give you college credit for a paper or report you present to them on your return, then I will collaborate with your college professors who write directly to me to ask about appropriate topics for papers or reports you might present to them, and I will offer you advice during your stay here (but not afterwards); you may use photographs you have taken and, indeed, we always encourage you to take photographs provided that you let us have copies for our use. You should inform your faculty that each one of our Field School's three-week sessions involves 180 hours of training, divided into about ninety of supervised excavation and retrieval of finds both by your own manual excavation and by wet-sieving (wet-screening) of excavated Pleistocene sediment, about seventy hours of supervised preliminary sorting of finds in our field-lab, about ten of talks and seminars and another ten for a visit to places of archaeological relevance and historical interest.

For those universities who require certificates of attendance as requisites for completion of undergrad degrees (especially in Archaeology, in the UK and Commonwealth countries, and a few others), I will sign their forms provided you bring them with you (I won't guarantee to do so if you forget to bring them and try to send them to me afterwards) and I always issue our own Field School certificates of attendance to every helper - whereas some universities only accept their own completed forms (e.g. London), others find ours to be an acceptable substitute should you forget to bring their own forms (e.g. Oxford).

I'm often asked to write in support of helpers who apply for graduate study. It is time-consuming and because I am extremely busy with other paperwork every December and January, I will write such support only provided that I have received the forms I have to fill in for you before October thirty-first, thereby giving me November to fill them in and send them off; usually graduate-study applications have to be in by the following February. Moreover, I will only fill in paper forms which can be returned by airmail (whether to you or the institution you are applying to, depending on its requirements) - whether for graduate-study or any other applications or requests on your behalf. I can fill paper forms in by hand after my university office hours while watching television at home in the evening.

Alas, I do not guarantee to help where an institution gives me no other option than to fill out an "on-line" form. I avoid like the plague having to go "on-line" to institutions and fill in forms "on-line" by computer, for several reasons. First, it can be very slow and take up far too much time in my office hours at the university. Secondly, "on-line" forms are constraining and often do not let me say all those things I might want to say but which I can easily add or annex to a paper form. Thirdly, institutional administrative or secretarial assistants (I have none) ought to be capable of transcribing documents into "IT" documentary formats (though some nowadays seem almost unable to read or write, let alone spell or punctuate with accuracy), but they are not trained either to do anthropological research or to give university lectures to students - both of which comprise what I am paid to do according to my employment contract, whereas I am not contracted to do secretarial work (for which in any case I have never been trained) and I refuse to do it "on-line" so that at the expense of my working time and labour some institutions can cut costs by employing fewer administrative or secretarial assistants to work for them than they might otherwise do; there is a fundamental matter involved here involving principles of natural justice, employees' rights and duties, and fair-play by employers in the work-place.

We rarely get financial help from the public authorities here, alas. We did receive some in 2007 and 2009, but there was none in 2008, 2010, 2011, 2012, or 2013 and there will be none in 2014 owing to economy measures brought in because of Spain's dire financial crisis. Anyway, much of the money we did receive was earmarked for costly infrastructure (e.g. our 4x4 field vehicle, our "Topcon" total GPS station for surveying; heavy safes to guard our finds; etc.) or for dating and other analyses at international centres. We rely on our field helpers to keep the fieldwork going. For attendance at one full 21-day session your contribution is rated at 50 euros a day for bed, light breakfast, mid-morning sandwich, cooked lunch, cooked supper,

laundry, instruction, transport between base camp and site, excursions, transport between Murcia Airport to our base on official pick-up and set-down dates, 2014 membership of MUPANTQUAT (attendance at both sessions entitles you to a reduction to 45 euros a day; first-time attendance for less than a full 21-day session is rated at 60 euros a day). In order to guarantee your reservation of a place a non-returnable deposit is required and because of that you might want to take out holiday insurance in case of last-minute inability to come. Deposits have to be non-returnable, alas, because we are in a holiday-resort area with flights that are heavily booked well in advance of the July-August high summer season. So even if we have someone on a waiting-list when you drop out, that person might not be able to book a flight only a very few weeks before the session begins. This means we might well have to use deposited moneys in order to try to tempt one of our local undergrads to take your place instead of taking a well-paid vacation job in a bar or restaurant beside the packed beaches or at a golf resort, because, in order to have adequate help on site at all times so that we can carry out our excavations efficiently we need always to have on site a basic minimum number of people, below which we cannot work smoothly.

I and my staff are looking forward to seeing many of you again this year,

Yours truly

Michael Walker

Sima de las Palomas location in Southeast Spain.

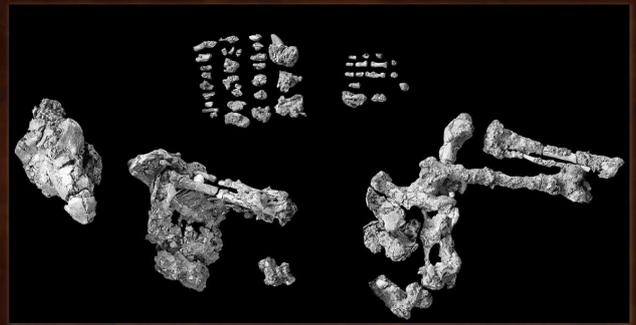

Sima de las Palomas del Cabezo Gordo (Torre Pacheco, Murcia, Spain) is a natural karst shaft in a marble outcrop. From about 120,000 BP it became filled with sediment that was partly removed by miners 100 years ago. Following chance discovery there of a human fossil in 1991, it has provided remains of at least 9 Neanderthal individuals dated to about 50,000 BP, together with Mousterian Palaeolithic implements (Walker et al., 2008, 2010, 2011a, 2011b, 2012).

Cabezo Gordo mountains.

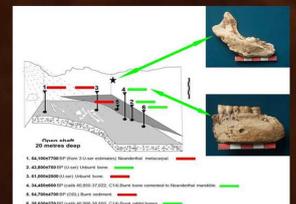

SP96 fossil location next to excavation west profile.

SP96 female adult skeleton, partially cleaned.

SP97 infant skull, partially cleaned.

Absolute chronology dates: Samples description and location in excavation area.

About 2 m below the overhanging roof of marble rock, three remarkably complete articulated Neanderthal skeletons, of unusually small adult stature, were excavated in cemented large angular scree (éboulis) between 2005 and 2009 by an international research group coordinated by Michael Walker at Murcia University's Subdepartment of Physical Anthropology. Very many bones were found in correct anatomical connexion, which has enabled adult stature to be ascertained with great accuracy and precision. At excavation, however, they were found encrusted in a heavily-cemented sedimentary matrix, and several had undergone some deformation, very likely post-depositional. It is possible that the three articulated skeletons were covered with large stones to avoid disturbance by leopards and hyaenas whose bones also occur at the site. Latterly, excavation of deeper levels has found extensive evidence of earlier use of the site in the form of abundant burnt animal bones together with stone tools, and the site may well have been significant to the local Neanderthals.

CAT scanning at Murcia University.

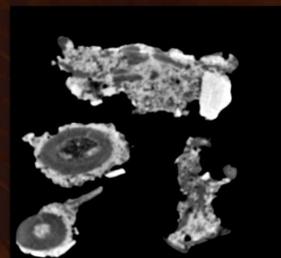

Laboratory cleaning and preparation of the skeletal components at Murcia University's Subdepartment of Physical Anthropology have been enhanced both by computer-assisted tomography (CAT) scanning of fossil-containing blocks of cemented sediment in order to locate the fossils, with precision and accuracy, and by employing CTS vibrosalpels, powered by compressed air, in order to remove cemented sediment adhering to the bones (thereby avoiding many risks inherent in traditional cleaning methods). CAT scanning is a necessary prerequisite for the application of methods of computer-assisted palaeoanthropology (CAP) in "virtual" reconstruction of bones that had undergone deformation in antiquity, thereby enabling accurate and precise osteometry and palaeoanthropological comparisons (Zollikofer & Ponce de León, 2005). We are carrying out scanning at Murcia University's Department of Animal Medicine and Surgery using a sixth-generation helical GE scanner at the University Veterinary Hospital.

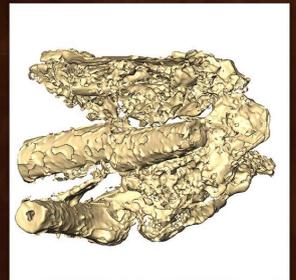

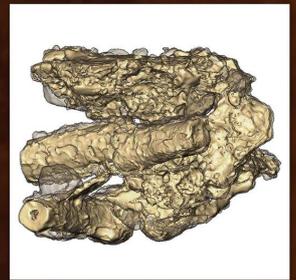

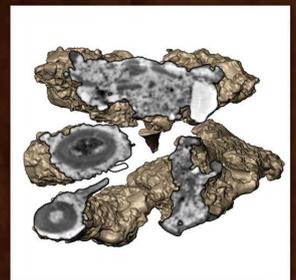

SP98 lower limb skeleton before and after physical sediment removal.

CTS vibrosápel.

Non-invasive matrix removal from Palomas SP96 femoropelvic remains using a "virtual acid bath" algorithm that gradually erodes sediment layers in analogy to physical preparation.

Initial steps have been taken towards undertaking "virtual" reconstruction using CAP methodology with AVIZO and OSIRIS software thanks to collaboration by the Zurich University Anthropological Institute. Particular consideration is being given to Sima de las Palomas Neanderthal adult skeletons such as SP96 and SP92, and the child skeleton SP97.

ACKNOWLEDGEMENTS:

Staff and students at Murcia University (Subdepartment of Physical Anthropology, Department of Zoology and Physical Anthropology, Biology Faculty, and CAT Unit, Department of Animal Medicine and Surgery, University Veterinary Hospital, Veterinary Faculty) and at the Zurich University Anthropological Institute, and members of the international field research team excavating Sima de las Palomas, and most especially we thank assistance and advice given by Professor Erik Trinkaus of the Washington University of St. Louis, USA.

RESEARCH PLAN

THE PROJECT AND ITS RESEARCH GOALS

The Project aims at achieving careful recovery, by scientific excavation, of skeletal remains of *Neanderthal* folk and their *Palaeolithic* stone tools and extinct animal remains, from between about 900,000 and 40,000 years ago, at the 2 southeastern Spanish sites in the province of Murcia of

CUEVA NEGRA ("Black Cave") in the River Quípar gorge at La Encarnación near Caravaca de la Cruz (0.9-0.8 m.yr), and

SIMA DE LAS PALOMAS ("Hole of the Doves") on *Cabezo Gordo* hill at Dolores de Pacheco near Torre Pacheco (60-40 k.yr.).

The Project is allowing full recovery of these materials to be used to draw comparisons and contrasts between findings at the site near the coast of *Sima de las Palomas* and those at the site in the inland hill-country of *Cueva Negra*. This throws much-needed light on the exploitation of natural resources by *Neanderthal* folk (*H. neanderthalensis*) and their even more archaic fore-runners (*H. heidelbergensis*) in two very different local environments 100 kilometres apart.

Sima de las Palomas overlooks the coastal plain behind a large coastal lagoon known as the *Mar Menor* ("Lesser Sea") from about 125 metres above sea level. It is therefore in a mild environment, where people could have lived throughout the year during the ice age. By contrast, *Cueva Negra* is at 740 metres above sea-level where the *River Quípar* emerges from a rocky gorge ("*Estrecho del Río Quípar*") overlooked by mountains rising to 1,500 metres above sea-level; it is only 30 kilometres from peaks which tower to over 2,000 metres. In ice-age times its environment was uninhabitable by man for much of the year.

OUR FINDINGS HELP TO FORMULATE PUBLIC POLICY WITH BENEFITS FOR THE TOURIST INDUSTRY AND LOCAL BUSINESS:

Our field research has led to development of regional public policy with the following outcome.

OPENING SOON: MURCIA MUSEUM FOR PALAEONTOLOGY AND HUMAN EVOLUTION (MUPEH, Museo de Palaeontología y Evolución Humana)

This imposing, new, purpose-built 5-storey museum has been erected by the Murcian Regional Government and Torre Pacheco township, below *Sima de las Palomas*, at the foot of *Cabezo Gordo*, but it still has to be fitted out. We accompanied our regional Minister for Culture together with its famous architect, Federico Soriano, who showed us around in January 2013. It has exhibition floors as well as workshops and laboratories, and even residential accommodation and a restaurant, as well as an auditorium. Our *Sima de las Palomas* *Neanderthals* will be the highlight of the display, naturally. The museum has been built thanks to our *Sima de las Palomas* finds which it will house, and we have been behind its establishment from the beginning. It has taken several years to come to fruition. The museum is very near the coastal resorts of the *Mar Menor* and therefore will be an important focus for cultural tourism. Because we are in a tourist area with hundreds of thousands of European Union summer visitors every year, our findings will reach a very wide international public indeed. Many local businesses have been involved in the construction and will be involved in its refurbishment and maintenance.

BACKGROUND AND SIGNIFICANCE OF THE PROJECT

Michael Walker writes: I was keen to extend knowledge about *Neanderthal* presence in southeastern Spain following my appointment there as Professor of Physical Anthropology at *Murcia University* in 1988. I had come to Murcia from *Sydney University* in Australia, from where I had already carried out research into both the southeastern Spanish Quaternary (e.g. Cuenca & Walker 1986 and refs.; Cuenca, Pomery & Walker, 1986, and refs.) and *Neanderthal* origins (Habgood & Walker 1986), and supervised Phil Habgood's exhaustive PhD thesis *A Morphometric Investigation into the Origin(s) of Anatomically Modern Humans* (published in the *British Archaeological Reports International Series, BAR S-1176, 2003*). (For other references, see *Reading Suggestions*.)

CUEVA NEGRA DEL ESTRECHO DEL RÍO QUÍPAR

I therefore lost no time in accepting an offer to visit *Cueva Negra* made by my friend Miguel San Nicolás, a Spanish prehistorian, who had dug a 2 metre-deep test pit there in 1981 and found possible "Mousterian" stone tools, and extinct animals such as *rhinoceros* (Martínez *et al.*, 1989). Apart from that test pit, no further work had been done there.

No sooner did I see the test pit, than I at once recognized something that the young archaeologist had not, but which my previous research in southeastern Spain had taught me to recognize easily - namely, that it was dug through a sediment laid down by the nearby river when it reached the cave from time to time, sediment which also included minerals derived from the rock of the cave walls and roof, and even a small amount of very fine wind-blown soil (known as *loess*) which must have been blown onto long-vanished swamps in front of the cave, on the *River Quípar* flood-plain, by fierce winds which whipped up enormous amounts of dust from the barren landscapes of the Sierra Nevada 200 kilometres to the south (where small glaciers still linger), and which probably extended northwards at altitudes of over 1,000 metres above sea level near to the cave. The sedimentary fill of *Cueva Negra* (5 metres deep at the back of the cave, perhaps 8 at the front) was deposited when the *River Quípar* (a tributary of the *River Segura* which reaches the Mediterranean Sea 110 kilometres East of our site) and swamps and lakes watered by it, sporadically reached the cave at a time when the *Quípar* flood-plain stood close to the level of the cave.

Earlier research, backed up by radiocarbon dating, had shown that the 3 river terraces of the *Segura* river basin may have been formed somewhat more recently than was once thought to be the case. The *lowest* terrace began accumulating only 30,000 years ago

when the third major cold stage of the last ice-age began, and after the *middle* terrace had stopped accumulating by some 40,000 years ago at the end of the middle stage of the last ice-age. The early and middle cold stages of the last ice age were when Neanderthal folk and "Mousterian" stone tools were especially widespread in Europe. My new excavations at *Cueva Negra* held out great promise of confirming the typology of its stone tools.

As we shall see, things have now turned out to be very different indeed, and far more surprising –amazing!– than I had ever imagined, and certainly very exciting for our understanding of early Palaeolithic archaeology in Eurasia. We know now that the sediments in the cave were laid down long, long before the last ice age, and that its Palaeolithic "Levalloisian" chert flakes some of which have edges modified by "Mousterian" retouch are among the oldest of this kind not only in Europe but even in Africa, and are accompanied by an "Acheulian" hand-axe on a limestone cobble. In short, the sediment had been laid down in the cave long, long before nearby river terraces came into existence, and was protected for posterity by tectonic uplift of the hillside in which *Cueva Negra* lies. More of all that later on!

But let us start now at the beginning. My project got under way when I started to excavate *Cueva Negra* in 1990. Since then I and my team have excavated there during three weeks every year. This field research has provided six adult teeth of Neanderthal-like (*Homo sapiens neanderthalensis* or *H. neanderthalensis*) or early (or pre-) Neanderthal folk (*Homo heidelbergensis*). The large Neanderthal-like teeth show severe attrition (wear); indeed, the crowns of both a canine and an incisor tooth were so worn down that the pulp cavity ("nerve") became exposed: such extreme wear is a well-known characteristic of Neanderthal adult teeth.

The prehistoric fauna at *Cueva Negra* includes remains of elephant (mammoth), rhinoceros, hyaena, bear, monkey (macaque), wild cattle, bison, wild horse, ibex, extinct giant deer, red deer, fallow deer, lynx, fox, rabbit, pika, tortoise, and over 60 different bird species. Several of these animals are, of course, no longer found in Western Europe nowadays. Of exceptional importance is presence of extinct Rodents (some of which were well and truly extinct by 600,000 years ago) which are being studied by Murcia University biologist Antonio López Jiménez for his PhD whom you will probably see a lot during the 2014 field season: especially, the fossil voles *Allophaiomys chalinei*, *Mimomys savini*, *Arvicola* cf. *deucalion*, *Pliomys episcopalis*, *Microtus brecciansis brecciansis* and *Terricola (Pitymys) huescarensis huescarensis*, and other extinct rodents include a fossil, *Allocricetus bursae*, and a wood mouse, *Apodemus flavicollis*, cf. *A. aff. mystacinus* (rock mouse), whilst lagomorphs include an early form of rabbit and also the pika, *Prolagus calpensis*, which also became extinct in Spain during the Middle Pleistocene. Pollen analysis conducted by Professor José Carrión of Murcia University points to benign damp temperate conditions.

The fossil rodents imply that the sediment in the cave was laid down by the start of the Middle Pleistocene, mostly towards the close of the Early Pleistocene 900,000-800,000 years ago. This implies that *Cueva Negra's* Neanderthal-like human remains are of the Neanderthals' direct forebears, *H. heidelbergensis*, perhaps similar to those from *Sima de los Huesos* (Bone Shaft) inside *Atapuerca Cave* in northern Spain - both there and at *Cueva Negra* the occurrence of "Acheulian" hand-axes sits easily with such an age. At Oxford University Dr Jean-Luc Schwenninger heads the Optical Sediment Luminescence Laboratory at the renowned Research Laboratory for Archaeology and the History of Art (RLAHA). He has visited *Cueva Negra* several times to take sediment samples and measure background radiation with a portable gamma-ray spectrometer, in order to estimate the age of the sedimentary deposit using the method known as optically stimulated sediment luminescence dating. It indicates an antiquity of greater than half-a-million years ago.

Sediment samples also were taken at *Cueva Negra* for palaeomagnetic research by Drs Gary Scott and Lluís Gibert from the Berkeley Geochronology Center. Their research on the magnetostratigraphy demonstrates that the entire 5-m depth of Pleistocene sediment belongs to the Matuyama magnetochron of reverse magnetic polarity, and therefore must predate the palaeomagnetic change 780,000 years ago to normal polarity that characterizes the Brunhes magnetochron. Although the Matuyama magnetochron commenced over 2,500,000 years ago, it was interrupted by short reversals characterized by normal polarity, one of which (the Jaramillo reversal) lasted between 1,100,000 and 990,000 years ago. The fossil Rodent biochronology suggests an antiquity no greater than one million years ago. It is therefore probable that the entire depth of sedimentary fill is no older than 990,000 years ago and no younger than 780,000. Both pollen and fauna testify to benign damp environmental conditions, probably corresponding to one of the three interglacial periods that are known to have occurred between 780,000 and 990,000 years ago (numbered as Marine Isotope Stages MIS-21, MIS-23, and MIS-25).

Among the large mammalian fauna, an Early Pleistocene horse is represented by a characteristic tooth that the Dutch palaeontologist Dr Jan van der Made, who works at Madrid's Natural Science Museum, considers to belong to *Equus altidens*, as had been suggested by the Barcelona palaeontologist, the late Dr Josep Gibert. An almost complete rhino skull and mandible belonging to a young rhinoceros (*Stephanorhinus etruscus*) were excavated in 1994, a larger rhino mandible in 1997, as well as a large fragment at a very great depth in our test-pit (square C2a) of a third in 2000, and a magnificent set of extinct giant deer (*Megaloceros* sp.) antlers was excavated in 1995; Dr van der Made considers it likely that it represents a new species from which two Middle Pleistocene lineages evolved in Europe. A bison horn-core and part of a macaque (cf. *Macaca sylvanus*) upper jaw, as well as a bear tooth and part of a hyaena mandible, are among the large faunal remains. An elephantid mandible fragment, excavated in 1993 at *Cueva Negra*, can hardly belong to any other species than *Mammuthus meridionalis*, which was the only fossil species that lived in Spain and southern Europe 800,000 years ago. Altogether, from 1999-2013, *Cueva Negra* has provided us with over 16,000 items that represent skeletal fragments of mammals, around over 4,000 of birds, and over 2,000 of reptiles, especially tortoise (which is mainly the extinct *Eurotestudo hermanni*, according to palaeontologist Dr Xabier Murélagu of the University of the Basque Country who has studied our collection). There is a very large number of splinters and fragments, several of which may turn out to be classifiable on further study by specialists in particular areas of comparative vertebrate anatomy and palaeontology; these splinters and fragments amount to 18,000 items.

Murcia University's Professor of Plant Evolution, Dr José Carrión, has identified pollen in soil at our site of species which include both evergreen and deciduous oaks (such as *Quercus faginea*) and some other broad-leaved trees, pointing to greater availability of surface water and benign temperate conditions: see J.S.Carrión et al., 2003, *Global Ecology and Biogeography* 12: 119-129 - when the manuscript was sent to the journal we had conjectured, in the absence of clear chronological evidence to the contrary, that the *Cueva Negra* sedimentary fill belonged to a time no older than 50,000-150,000 years ago, which is reflected in the published article though the palaeoenvironmental results are certainly compatible with the much greater antiquity that has been demonstrated since then.

British avian palaeontologist Anne Eastham has identified over 60 bird species at *Cueva Negra*, including diving ducks, waders, and other waterfowl which point to former lakes in what today are rather dry river valleys in which rivers are little more than small streams. Other birds, such as jays and woodpigeons, eat acorns, and they hinted at presence of oaks even before their pollen was identified by José Carrión. Yet other birds such as larks and plovers show that there were also wide areas of open country near the site. In short, the

site was located conveniently for exploiting resources present in different local environments quite close to hand, from wetlands with stands of broad-leaved trees, to parkland where open spaces were interspersed with stands of woodland, and open rough steppe with stands of pines and other conifers, and finally steep hillsides with crags and mountainsides.

The Palaeolithic assemblage is represented at *Cueva Negra* by over 1,000 classifiable pieces (of which more than half are struck flakes without retouch) and several thousand fragments and spalls, found by us over the period 1990-2013. Most of it is made from poor quality chert, quartzite, limestone and marble; cobbles of these were taken to the cave by *H. heidelbergensis*. Since 2004 we have excavated some fine examples of the Levalloisian core-reduction technique of preparing flint flakes, in deep layers close to where we had excavated the Acheulian bifacially-flaked hand-axe, in 2003. These layers also have small stone tools with steep abrupt Mousterian retouch. It is very exciting that an Acheulo-Levalloiso-Mousterian industry was present ca. 800,000 years ago because it shows conclusively that all three kinds of Palaeolithic stone-tool preparation formed part of a single tradition from the end of the Early Pleistocene in Europe.

One very important source of raw materials for making stone artifacts was an outcrop of conglomerate 800 metres (half a mile) away from *Cueva Negra*. The outcrop represents a fossil shingle beach of the shore of the Miocene *Tethys* Sea, which, millions of years ago, in the Tertiary geological era, stretched from the Atlantic Ocean across what is now the Mediterranean Sea and eastwards to what is now the Persian Gulf. The pebbles and cobbles at the outcrop include flint, chert, Jurassic limestone and quartzite. None of these occur in the rock walls or roof of *Cueva Negra*, which are somewhat later Miocene biocalcarene rock. Our identification of the nearby local rock source was greatly enhanced in 2011 thanks to collaboration at Arizona University, where recent anthropology graduate Winston Zack, who spent three field seasons here, submitted many samples he took, from both the site itself and chert outcrops in its vicinity, to Dr Alex Andronikov at AU's Lunar and Planetary Sciences Laboratory who has conducted spectroscopic analysis of rare-earth trace elements in the cherts. This research is the subject of an article in press with the journal *Quartär* (vol. 60 for 2013).

At the conglomerate outcrop, we have picked up a typical waste end-product (a small "*Levallois disc-core*") which is what was left over after early humans had removed from a pebble here several flint flakes for use as everyday cutting, scraping, or piercing tools. We have also picked up small retouched Palaeolithic implements including a small scraper similar to others excavated at *Cueva Negra*. Another small disc core, this time of limestone, was also found on the hillside near the cave itself. Up to now, small Levalloisian disc cores (even those with minimal peripheral prepared faceting) had not been found that date from before 300,000-400,000 years ago in Europe and the Near East. At *Cueva Negra* our excavations show that Levalloisian flakes are present in deep layers that are very much older and the two disc cores are likely to be no less ancient. Of special interest at *Cueva Negra* is are finds of 3 so-called "soft" hammers, or soft knapping billets which were used for knapping stone delicately and made from the butts and pedicles of the antlers of deer.

Since 2004 we have excavated some splendid flakes produced by the Levalloisian core-reduction technique, in layers close to where in 2003 we had excavated a bifacial core-tool which is an Acheulian hand-axe. It is extremely gratifying to be able to show presence of very different knapping techniques at such great depth. Our 2003 campaign at *Cueva Negra* had concentrated on an area adjoining that in which our 2001 excavation of a 3 x 1 metre area explored a consistent palaeolithic living surface with fragments of stone knapping, broken bone fragments, and other débris. It was at a position of intermediate depth with regard to the levels defined at the site, but was probably not encountered during earlier campaigns that went deeper because where those excavations took place there had been a massive slab of rock which fell from the roof during the Pleistocene and occupied most of the area behind where we identified this living surface in 2001. In 2003 we had begun to excavate a 3 x 1 metre area next to it. At the end of the campaign we were a few centimetres above where we expect to find it, which we did, when in the 2003 campaign. This very exciting phase of our work at the site culminated in the marvellous surprise that was the excavation here of an Acheulian hand-axe and confirmed the extent of an important activity area.

The hand-axe had lost its tip in antiquity, no doubt through (mis)use. A remarkable aspect of the artifact is that it was made by bifacial working of a flat cobble of local limestone, not chert, probably got from a nearby outcrop of conglomerate mentioned earlier. The spectacular find brought into perspective two matters that had concerned us previously: first, the widespread evidence for knapping of limestone at *Cueva Negra* (spalls and chips, flakes, retouched pieces, and perhaps the disc core mentioned earlier), and, secondly, a hitherto puzzling singular find of a flat limestone cobble with bifacial retouch in the shape of a chopping-tool of "pick"-like form, that may have been an unfinished hand-axe, excavated in the same level of an adjoining square in 2001.

The significance of the coexistence of Acheulian, Levalloisian and Mousterian techniques of stone artefact preparation is that it gives support to Southampton University's Professor Clive Gamble who has stressed the importance of the coexistence in Europe, from half-a-million years ago, both of assemblages comprising large numbers of bifacially-flaked core-tools, and assemblages of retouched flake tools, and has posed a crucial matter for archaeologists to consider from the viewpoint of alternative core-reduction sequences (the French call them *chaînes opératoires*) of Palaeolithic knappers: "*With the chaîne opératoire we now have the methodological tools and a conceptual model for moving the debate onto the productive pastures of hominin involvement with their taskscapes. For example, were these taskscape skills merely those of tool assisted hominins ... or are we dealing with more sophisticated capabilities comparable in many respects to modern humans ...?*" (Gamble, C.S., 1999, *The Palaeolithic Societies of Europe*, Cambridge University Press, p. 138).

Put another way, did, in Europe, those Pleistocene Pre-Neanderthal (*H. heidelbergensis*) forerunners of Neanderthals behave in so very similar a fashion to Pleistocene *H. heidelbergensis* forerunners in Africa of anatomically-modern *H. sapiens*, such that (a) Neanderthals ought to be best regarded as *H. sapiens neanderthalensis*, and (b) both they and anatomically-modern *H. sapiens* ought to be regarded as evolutionary descendants of a common Afro-European *H. heidelbergensis* which was wholly comparable and commensurable throughout as regards not only skeletal anatomy, but also *behaviour* - in so far as this is demonstrated by the ease with which they were able to follow *alternative* reduction sequences in knapping stone obtained locally at *Cueva Negra*, namely, a bifacial reduction-sequence of cores into bifacially-flaked core tools such as Acheulian hand-axes, and preparation of small disc cores on which repetitive flaking reduced these further still, in order to remove flakes, of predetermined size and shape, for subsequent Mousterian edge-retouch into flake-tools such as scrapers or points?

I have attempted to get to grips with this aspect of cognitive evolution 900,000 years ago at *Cueva Negra* in my recent contribution published in 2009, "Chapter 7. Long-term memory and Middle Pleistocene 'Mysterians'," pp. 75-84 in S.A.de Beane, F.L.Coolidge & T.Wynn (eds), *Cognitive Archaeology and Human Evolution* (Cambridge and New York, Cambridge University Press, ISBN 0521746116). The book includes papers presented at a colloquium on cognitive evolution during the XV Congress of the

International Union of Prehistoric and Protohistoric Sciences at Lisbon in 2006. Tom Wynn is Professor of Anthropology at the University of Colorado at Colorado Springs where Fred Coolidge is Professor of Psychology, and they have written many articles about Palaeolithic technology and cognitive evolution as well as the book *The Rise of Homo Sapiens* published in 2009 by Wiley-Blackwell, and Sophie de Beaune is a prehistorian at the University of Lyons who also has published in the same area. I have dealt with the matter also in a recent scientific article: M.J.Walker, M.V.López-Martínez, J.S.Carrión-García, T.Rodríguez-Estrella, M.San-Nicolás-del-Toro, J-L.Schwenninger, A.López-Jiménez, J.Ortega-Rodríguez, M.Haber-Uriarte, J-L.Polo-Camacho, J.García-Torres, M.Campillo-Boj, A.Avilés-Fernández, W. Zack: "Cueva Negra del Estrecho del Río Quípar (Murcia, Spain): A late Early Pleistocene hominin site with an "Acheulo-Levalloiso-Mousteroid" Palaeolithic assemblage" *Quaternary International* 294, pp. 135-159, 2013 (ISSN 1040-6182).

Neither the complexity nor the antiquity of our *Cueva Negra* tool-kit need come as a complete surprise. In Africa, the Levalloisian core-reduction technique goes back to 1,400,000 years ago (I. de La Torre, R.Mora, M.Domínguez-Rodrigo, L. de Luque & L. Alcalá, 2003: "The Oldowan industry of Peninj and its bearing on the reconstruction of the technological skills of Lower Pleistocene hominids", *Journal of Human Evolution*, 44 (2), 2003, pp. 203-224). In Africa, reduction of stone to fashion hand-axes goes back as far as 1,700,000 years ago. Both types of reduction imply cognition of imaginary secant planes that divide volumes, symmetrically in the case of bifacial hand-axe fashioning, but asymmetrically in the case of Levalloisian disc cores such that the major volume could be knapped in a way that in the end "released", so to speak, the flake of intended shape to be removed from within it (Tom Wynn has written that this is the most demanding and complex of all reduction-sequences ever developed). It tells us much about the evolutionary significance of early human cognitive awareness that probably lay behind the dispersal of *Homo* out of Africa and throughout Eurasia before 1,500,000 years ago.

Our 2011 season's astounding discovery of traces of ancient fire lying deeply within the cave sediments confirms the ability of humans to survive in higher latitudes than those of equatorial Africa where their ancestors originally had evolved between 4 and 2 million years ago. The 2012 and 2013 field seasons extended our findings. Fire allowed our ancestors to keep warm at night and wild animals at bay, but especially to cook food and thereby enhance rapid absorption of nutrients so necessary for physiological metabolic processes in the body and especially the brain. Ours is the oldest firm evidence for fire at a Palaeolithic site outside Africa (where it is found at sites going back to before 1,000,000 years ago). We have found many fragments of charred and even calcined bone. Some calcined long-bone fragments had undergone length-wise splintering which occurs when heat has volatilized the organic components of bone which then shrinks and cracks open. We also have excavated several spalls of burnt chert and a spectacular lump that had exploded owing to thermal shock which was uncovered with the resulting razor-sharp splinters still in place like the petals of a rose. The temperature had reached 550°C, according to spectrometry analyses of the burnt bone and chert, which have been undertaken by Dr Anne Skinner at Boston's Williams College using electron spin resonance methods, and Dr Francesco Berna at Simon Fraser University using Fourier-transform infra-red techniques with which he carried out postdoctoral research at Boston University under the guidance of the distinguished geoarchaeologist Professor Paul Goldberg who developed the method there. Dr Berna's friend, geoarchaeologist Dr Diego Angelucci of the Italian University of Trento, has studied the micromorphology of thin sections he took at Cueva Negra with his PhD student Daniela Anesin (see *Quaternary Science Reviews* vol. 80, pp. 195-199, 2013).

People sometimes ask for my views on hominin evolution in the Pleistocene. Were *Neanderthals* an evolutionary side-track with a dead end, or were they part of a seamless web of evolving humans? Well, to see what I think, try reading two of my articles "The quest for our human ancestors" in *The Review of Archaeology* vol. 24 (1): 20-38 (2003) and "Hominin Tar Babies, Palaeolithic Chewing Gum, Middle Pleistocene Gloop, and Dissipative Systems" in *The Review of Archaeology* vol. 26 (1):1-25 (2005).

SIMA DE LAS PALOMAS DEL CABEZO GORDO

Over 100 years ago, miners on the hill of Cabezo Gordo (which simply means Big Hill) were attracted by a vein of the iron ore magnetite which made a dark stain in the pale-grey marble rock of the hillside. The iron had welled up in molten form through the limestone when volcanic activity was fierce here during the early Mesozoic. The miners dug an artificial shaft down hoping to follow the vein which, however, petered out, and they found themselves digging hard breccia out of a natural cavern which went not only downwards, but also back up to the surface again in what we now call the *Sima de las Palomas* which is a vertical shaft 18 metres deep the mouth of which is at 125 metres above sea-level on the barren hill-side; the miners took out more than three-quarters of its natural fill. To speed up removal of this unwanted material, they blasted a horizontal tunnel through the hillside to the bottom of the main shaft. Disgusted, no doubt, by finding no iron after so much work, they did not bother to remove that part of the breccia which today still forms an intact column, rich in fossils and stone tools, from top to bottom against the rear wall of the natural shaft, and which we have been excavating scientifically since 1994.

Chance discovery by a spelaeologist called Juan Carlos Blanco Gago in 1991 of a very important fossil, consisting of parts of the upper and lower jaws of a human face, which he noticed in the side of the natural shaft of *Sima de las Palomas* about three metres below the surface, drew our attention to the great research potential of the sediments in the shaft (Gibert, Walker, *et al.*, 1994). The spelaeologist belonged to a local environmental conservation group, and he was descending the shaft on an abseil rope to find out what kinds of birds nested in the cave. He saw the fossil in the upper part of sediments banked against the rear wall of the shaft and pulled it out, without realizing what it was. Being a careful person, he saved it and showed it to us. On cleaning, it turned out to belong to the lower part of the face of a Neanderthal - parts of the upper and lower jaws, in fact. Neanderthals lived in Europe between 150,000-35,000 years ago, and are assigned to an extinct human subspecies, *Homo sapiens neanderthalensis* (or *H. neanderthalensis* for short).

Preliminary field-work by us at this site began in 1992 and continued in 1993, when, together with my palaeontologist friend, the late Dr Josep Gibert of the "Dr M.Crusafont" Palaeontological Institute and Museum at Sabadell (a satellite city of Barcelona), and our helpers, we sifted through rubble which iron-miners who entered the natural cave 100 years ago had piled up inside or thrown out onto the hillside. The miners had also driven a horizontal tunnel through the rock of the hillside to meet the bottom of the shaft. The tunnel became partly filled up with rubble which had fallen down the shaft, and has been removed and sieved to give us many important finds. The important task of sieving the mine rubble on the hillside and in the tunnel gave us 25 finds of Neanderthal bones or teeth. In 1997 a Neanderthal maxilla (upper jaw) bone was found this way. Other finds include parts of jawbones (mandibles) belonging to three adults and two children, various loose teeth, part of a child's maxillary bone of the face, parts of 2 adult cheekbones (zygomatic bones) and two fragments of the massive Neanderthal bony brow ridges over the eye socket, as well as several large fragments of bones of the skull vault - frontal, parietal, temporal and occipital bones. We have also found several vertebrae and fragments of arm bones (humerus, ulna), leg bones (femur, fibula), finger and toe bones, and part of a hip-bone. Some of the bones show traces of burning. Because all these finds are from the mine rubble we do not know where originally they had come from within the cave.

Tens of thousands of years before, the natural shaft slowly filled up with earth and stones which trickled down off the limestone hill-side, together with water rich in calcium carbonate dissolved out of the limestone and which percolated into the earth and rock, cementing them hard in a compact fossil conglomerate called *breccia*. In it, bones of extinct animals hint that sometimes it was visited by panthers who maybe climbed down into the top of the cave with an ease common to all cats, though it is perhaps even more likely that they were hunted and killed by Neanderthals. When the deep shaft was almost filled up, Neanderthal folk settled in, unaware that the earth floor they camped on was over 15 metres thick. Eventually, the skeletons of three of them (including that whose jaws had been found by Juan Carlos Blanco Gago) became covered by a downward-sloping heap of very large stones. Some may have been laid intentionally over the bodies; others may well have been washed into the mouth of the former shaft by heavy rainstorms - we once were caught unawares by one when working, and had to spend a couple of hours in our excavation cowering behind a short-lived albeit terrifying waterfall, unable to climb out through it. The two-metre deep, sloping pile of stones over three Neanderthals whose skeletons were well preserved beneath it, became partly cemented later on by calcium carbonate; we now call this mass of cemented stones "conglomerate A". Nevertheless, it was porous enough for finer sediment to pass through it afterwards and accumulate behind it.

This later, finer sediment contained 65 dispersed fragments of bones and teeth of Neanderthal adults and children, as well as Mousterian or Middle Palaeolithic implements made from flint flakes and animal bones. We excavated the mandible of a baby and another of a child. In 1998 we excavated a large adult mandibular fragment that had a small piece of burnt animal bone cemented to it. This piece of burnt animal bone gave an accelerator radiocarbon (AMS-¹⁴C) determination of 35,000-40,000 years ago at Oxford University's Research Laboratory for Archaeology and the History of Art (RLAHA) where the Director of the Radiocarbon Laboratory and Accelerator Unit, archaeologist Professor Tom Higham tells us that his determination of 34,450±600 BP (OxA-10666) corresponds to a real age of at least 40,000 years ago when calibration factors are applied; Tom subsequently obtained a second determination, of 35,030±270 BP (OxA-15423) on burnt lagomorph (rabbit) bones found nearby. After calibration the dates probably correspond to the period 43-38,000 BP, but because of the ever-present possibility of later contamination by minuscule amounts of ¹⁴C formed subsequently, the most that can be said is that the real age is *no later* than 40,000 years ago and could be very much older. A uranium-series date of 43,800±750 (APSLP4) obtained on bone by Dr Alistair Pike, then at the University of Bristol's Archaeology Department (now at Southampton University), may hint at an age of about 45,000-43,000 years ago; nevertheless, because contamination might here again have affected the estimate, it is better to regard it still as the *minimum* age of the uppermost two metres of the finer sediment that had built up behind the cemented stones of conglomerate A that contains three articulated Neanderthal skeletons (see below). Here Dr Pike obtained two uranium-series dates, of 54,100±3850 (APSLP-1) and 51,000±1250 (APSLP-6) on fragments, respectively, of Neanderthal human bone and animal bone, using laser ablation multicollector mass spectrometry. They are comparable to an optically stimulated sediment luminescence date of 54,700±4700 date obtained (on sample X2509) by Dr Jean-Luc Schwenninger, head of the Optical Sediment Luminescence Dating Unit Laboratory of Oxford's RLAHA, and perhaps to a date obtained a few years ago on an aragonite crystal from a nearby level by uranium-series dating of 56,000 (+13000/-10000) BP by Dr Joan-Antoni Sánchez-Cabeza at the Physics Department of the Autonomous University of Barcelona. For a discussion about the dating see our 2012 article: M.J.Walker, M.V.López-Martínez, J.Ortega-Rodríguez, M.Haber-Uriarte, A.López-Jiménez, A.Avilés-Fernández, J.L.Polo Camacho, M.Campillo-Boj, J.García-Torres, J.S.Carrión-García, M.San Nicolas-del Toro, T.Rodríguez-Estrella: "The excavation of the buried articulated Neanderthal skeletons at Sima de las Palomas (Murcia, SE Spain)" *Quaternary International* 259: 7-21, 2012 (ISSN: 1040-6182).

From about two metres below the top entrance that gives access to both our upper excavation cutting and the main shaft of *Sima de las Palomas*, we have excavated articulated Neanderthal skeletons with two new skulls and attached mandibles, in 2005, 2006, 2007, 2008 and 2009. The first find which was made back in 1991 by Juan Carlos Blanco Gago had come from that deep position, and as it was of a mandible in anatomical connexion with the maxillae, it is clear that in fact there has been three Neanderthal individuals here. The articulated skeletal remains of three Neanderthals (two adults and a juvenile) here include skulls, chest, upper limbs, back-bone, pelvis, lower limbs, and bones of the hands and feet. There is one remarkably well-preserved foot, and also an articulated elbow joint (lower part of humerus in articulation with upper part of ulna and radius). They are being cleaned, slowly and carefully, by Biology graduate and PhD candidate Jon Ortega Rodríguez in the Physical Anthropology research laboratory at Murcia University's Biology Faculty; the work has been greatly advanced by our acquisition in 2011 of a small compressor and vibroscalpels (sometimes called "air-scribe" tools).

The Neanderthal skeletal remains were excavated a few centimetres above where Juan Carlos had plucked out the Neanderthal skull fragment of the two maxillary bones and teeth cemented to the jawbone, when he descended on his abseil rope twenty years ago. Our skeleton SP96 is 85% complete and belonged to a young woman whom we now call "Paloma". Below her was a child's skeleton (SP97). Both have well-preserved skulls and mandibles. Underneath them was another adult (SP92) close to which there were Paleolithic flints and some burnt animal bones, perhaps remains of food eaten near the time the Neanderthals died. None of the three skeletons showed signs of burning. Maybe they were covered up with large stones, perhaps to stop hyaenas and leopards from scavenging (bones of both carnivores occur at the site). Our Neanderthal skeletons are of worldwide importance because almost 40 years have passed since the last time a European Neanderthal was excavated with its skeleton articulated in anatomical connexion (at St-Césaire in France).

The female skeleton SP96 is the subject of an article published in June 2011 in the weekly *Proceedings of the National Academy of Sciences of the USA (PNAS)*. How close were the three skeletons in time to those other *Neanderthal* remains found dispersed in the finer sediment that accumulated later on behind conglomerate A? It is not wholly beyond the bounds of possibility, let alone outside the likely ranges of error of the dating methods at our disposal, that only a short period of time separated them or perhaps two or three thousand years separated them.

The total number of separate bone fragments and teeth from Sima de las Palomas identified to date is almost three hundred items. The number of mandibles (or fragments of them) that belong to different Neanderthal individuals is nine (three were found in mine rubble; three from the uppermost part of our excavation; two belong to excavated articulated skeletons SP96 and SP97 and it is very likely that the one removed from the side of the shaft in 1991 by Juan Carlos belongs to articulated skeleton SP92).

Towards the end of 2006 I wrote asking about the possibility of hunting for Neanderthal DNA in our *Sima de las Palomas* bones to Professor Svante Paäbo, the internationally renowned geneticist who conducts research into both mitochondrial and nuclear DNA from Neanderthal bones, who is the Director of the ultra-modern, seven-storey-high, Max-Planck Institute for Evolutionary Anthropology at Leipzig in Germany, and whom I had first got to know at a meeting in Madrid back in 1993. He invited me to Leipzig where I gave a talk to his Institute in 2007 which was well received. Svante Paäbo made useful suggestions about how we might best

excavate the *Sima de las Palomas* Neanderthal skeletal remains, wearing face-masks and surgical gloves, and putting the fossils into sterile containers. This we did in 2007 and in that autumn Svante's then PhD student, Oxford University Biology graduate, now Dr Adrian Briggs, came to Murcia and we helped him as he extracted samples from our newly-excavated Neanderthal bones in a sterile operating theatre in Murcia University's Veterinary Science Faculty. Dr Pääbo reported back from Leipzig that our excavation technique had been so good that almost no modern human DNA contamination could be detected, though so far, alas, neither has any Neanderthal DNA been identified. In 2008 Dr Pääbo sent over another of his PhD students, now Dr Thomas Maričić, who took part in our *Sima de las Palomas* field season, sampling human remains during excavation. He took the samples back for analysis at Leipzig. Alas, Dr Pääbo's team there still failed to detect either nuclear DNA or mitochondrial DNA; however because they could not detect contamination by modern DNA either, Dr Pääbo thinks that the field methodology was adequate but that over many thousands of years high ambient summer temperatures at the site have destroyed Neanderthal DNA.

Another world-famous researcher into Neanderthal skeletal fossils who is also collaborating closely with us is Professor Erik Trinkaus of the Washington University of St. Louis, Missouri (USA). Erik visited Murcia to study the *Sima de las Palomas* remains twice in 2007 and again for ten days in January 2011 for a morphological study of "Paloma" (SP96) that was published in June 2011 in the *Proceedings of the National Academy of Sciences of the USA (PNAS)*. He hopes to return in the summer of 2014. We are privileged to have Professor Trinkaus working on the collection. Another collaborator is Barcelona University anthropologist Dr Alejandro Martínez Pérez-Pérez who has taken casts of all of the teeth at *Sima de las Palomas* which help him to conduct research into attrition and wear on the crown; his research on microstratigraphy on the side of tooth crowns throws light on the kinds of food eaten by prehistoric folk. His work complements research on our teeth that has been undertaken over the years both by the dental anthropologist and orthodontician Dr Vince Lombardi from Pittsburgh, a long-standing collaborator who joined us in the field again in 2011, and in the Subdepartment of Physical Anthropology at Murcia by Dr Josefina Zapata who has photographed carious lesions in two teeth. In 2011 we were visited by physical anthropologist Dr Patricia Bayle, at Bordeaux University who returned in March 2012 with Professor Kate Robson-Brown from Bristol University together with its travelling microscanner (brought in a very large van), accompanied by its specialist engineer Nick Corps, which gave excellent resolution with the *Sima de las Palomas* loose teeth, on which detailed research is continuing. Two students of Professor Trinkaus are also assisting in our dental research, John Wilman who visited us in 2011 and Sarah Lacy who was present with Drs Bayle and Robson-Brown in March.

We were also visited by Dr Amanda Henry from the Max Planck Institute for Evolutionary Anthropology at Leipzig where she and Drs Domingo Carlos Salazar-García, Robert Power and Cynthia Spiteri study the plant component of Neanderthal diets by investigating phytoliths in dental calculi, and other biological residues, and she now has detected their presence in calculi of *Sima de las Palomas* teeth (see D.C.Salazar-García, R.C.Power, A.Sanchis Serra, V.Villaverde, M.J.Walker, A.G.Henry: "Neanderthal diets in central and southeastern Mediterranean Iberia" *Quaternary International* 2013, 318:3-18, ISSN: 1040-6182). Research will be conducted in 2014 on the possibility of prehistoric biological residues on several large rounded river cobbles that must have been brought to *Sima de las Palomas* by the Neanderthals, perhaps in order to grind or pound foodstuffs, or maybe mineral pigments. Dr Spiteri has carried out research on residue analysis and she will be helped at the Leipzig Institute by Queensland University PhD student Birgitta Stephenson who will. Birgitta is both a pharmacologist and an anthropologist who has excavated with us several times and has developed new histochemical techniques that have led to identification of biological residues on prehistoric Australian Aboriginal grinding stones. The river cobbles have been excavated, together with many Mousterian flint implements and charred animal bones, in levels that we have been excavating for the past three field seasons, such that now we are over two metres below where the articulated Neanderthal skeletons were uncovered. These deep levels are extremely interesting because they demonstrate that the site was used for domestic purposes such as cooking over a long period of time indeed.

In 2011 we began to carry out CAT scanning of the excavated Neanderthal skeletons using the new General Electric scanner installed at the end of 2010 in Murcia University's Veterinary Faculty Hospital, and to help us to orientate the study we were joined by the renowned Swiss expert in scanning Neanderthals and other hominids, Professor Christoph Zollikofer, Director of Zurich University Anthropology Institute, and his wife Dr Marcia Ponce de León (they have published many important scientific papers using the technique). Later in 2011 Jon Ortega Rodríguez and I visited their Zurich lab. Jon returned there in autumn 2012 for a few weeks to learn the IT techniques our Swiss colleagues use. We published a poster with them that I presented in September 2012 in Bordeaux at the 2nd Annual Meeting of the recently formed European Society for the Study of Human Evolution, and the poster was shown again in April 2013 accompanying a talk about the *Sima de las Palomas* Neanderthals that I was invited to give at the 55th Annual Meeting of the international Hugo Obermaier Society for Quaternary Research and Archaeology of the Stone Age, held at Vienna's grand Natural History Museum. Jon is continuing the work with the scanner here at Murcia with the dual aim of both facilitating location of bone hidden in breccia cement and especially the creation of virtual reconstructions of Neanderthal skeletal parts using image-analysis computer programs. Klará Pármová from the Czech Republic, who had worked with us in previous field seasons, came once again in 2012 from Brno, in fact twice, to help us once more in the field at *Sima de las Palomas* and then later on after Jon returned from Zurich to work with him in the lab, and her help was greatly valued by us, and so is that of our lab technician Ana Asensio and of our new graduate Ángel Buitrago who has spent several seasons with us in the field as well as helping to clean the skeletons in the lab.

Animal remains from *Sima de las Palomas* include teeth of hippopotamus and hyaena, and bones or teeth of leopard, aurochs, wild horse, ibex, red deer, lynx, porcupine, fox, badger, hare and tortoise. Between 1992 and 2013 several hundred classifiable skeletal elements have been found and around thousands of bone splinters and fragments many of which still have adherent cemented breccia. Of particular interest are leopard remains. A complete leopard skull was found in a low position in the breccia column by the same palaeontologist who found the first hominin in 1991, and according to both the palaeontologist, the late Dr Josep Gibert, and another palaeontologist who has also helped studying the fauna, Dr Alfonso Arribas of the Museum at Madrid's Instituto Tecnológico y Geominero de España, it belongs without doubt to a late Middle Pleistocene type, known from southern France as *Panthera pardus cf. lunellensis*. In 2006 we excavated two phalangeal bones of leopard paws in our upper cutting, and it may be wondered whether the remains found in 1991 could have fallen from above due to mining operations in recent times. In 2011 porcupine jaws were excavated and Sara Rhodes presented a master's thesis at Toronto University on them which appear to belong to *Hystrix brachyura*, and a poster about them was presented at the 41st Annual Meeting of the Canadian Association of Physical Anthropology in 2013. Sara returned in 2012 and 2013 and she is now studying some taphonomical aspects of *Cueva Negra* faunal remains from the deep level with evidence of thermal alteration there.

In 2003 my colleague in the Biology Faculty at Murcia University, palaeopalynologist Professor José Carrión defined pollen in soil at *Sima de las Palomas* of species which include both evergreen and deciduous oaks (such as *Quercus faginea*) and some other broad-

leaved trees, pointing to greater availability of surface water (see the article in *Global Ecology and Biogeography* vol. 12, already mentioned); he and his team returned and took more samples in 2009 and 2010.

Even before we were able to build a 20-metre high scaffolding tower and take aragonite crystals for uranium-thorium dating from the breccia column, we had a fair idea of its age because we had sent 3 fragments of fossil animal bone, cemented in breccia thrown out from the shaft by the miners which we had found on the hillside, to geochemist Dr Peter Pomery of Australia's University of Queensland who obtained electron spin resonance dates of 83,000/42,000, 146,000/73,000 and 532,000/266,000 years ago. The estimates served to give a rough idea of the great antiquity of the remains though Dr Sánchez-Cabeza's uranium-series dates gave us the age-range of the visible breccia column with better accuracy and precision as spanning the last interglacial period and continuing into the last glacial period.

The Mousterian industry from the site includes some 1,000 classified pieces, from retouched scrapers to simple struck flakes and cores (and there are over 3,000 unclassifiable fragments of flint and other stone materials that also must have been brought to the cave by the Neanderthals, because they do not occur in the limestone in which it lies). The 2013 campaign found several retouched Mousterian implements and many fragments and spalls. Many pieces are on good quality flint (and even occasionally jasper), but there are also rock-crystal implements and others of marble, siliceous metamorphous dolomitic limestone, quartzite, and milky quartz. There are typically Mousterian stubby points or convergent scrapers, and flat triangular projectile points are common (of Levallois or "pseudo"-Levallois type).

At the foot of the breccia column, a test pit in the floor of the main chamber shows that it lies on a depth of at least a metre-and-a-half of rubble and soil disturbed by the miners who left behind a Winchester rifle cartridge in it! In 1997 we considerably extended the excavation here down into what seemed likely to be undisturbed sediments without, however, any palaeontological or palaeolithic remains so far. This work continued downwards and outwards in 1998, 1999, 2000, 2001 and 2002. We thought we had been rewarded when we discovered a layer extraordinarily rich in microfaunal remains that we meticulously excavated until in 2001 we found iron nails and hooks in it, indicating that it was no more than a heap of skeletons of rock doves, bats and small mammals, which the miners who entered the cave in the nineteenth century must have gathered together and burnt, before covering them with soil.

In 2002 we excavated down a further 1.5 metres in the deepest sediments in this cutting until calcrete flowstone covering cobbles and limestone rock blocked further excavation. We found three palaeolithic struck flint flakes, all heavily patinated, and infer from the nature of the sediment that reworking of it had taken place, perhaps during the last interglacial period when the sediment here was waterlogged because the water table was higher than today. The reworking, combined with mining operations, indicates that this part of the cave does not afford a sequence of undisturbed deep Pleistocene sediments and excavation here has been discontinued therefore. We now think that those sediments hint at a new interpretation of the sedimentary and geomorphological history of the cave. It is plausible that today's main chamber is the result of miners having broken through a rock wall from an open natural karstic rift, down which they had first entered the cave, into a nearby karstic rift that they found to be completely filled with Late Pleistocene breccia (most of which they threw outside). Only at a greater depth still, we now think, did these two hypothetical rifts communicate formerly via a horizontal phreatic karstic network of small passages in which mixing of waterlogged sediments took place whenever the water table rose high enough to inundate them; this network did not open on to the hillside and therefore could never have been entered by animals or humans during the Middle or early Late Pleistocene. Thus the lower cutting we had excavated beneath the open rift entered by miners is of no palaeoanthropological interest.

It is nevertheless possible that beneath our scaffolding tower, sediments deep to it, in what we now believe was once a parallel rift, could contain material that had fallen into it from above, including the three palaeolithic flakes that probably became displaced laterally, in the aforementioned hypothesized horizontal network, for us to discover deeply below the rift whereby the miners had entered the cave system. We also suspect the rift containing the breccia column may have been full of water during the last interglacial period, opening at the surface as a well of water where our upper cutting now is. Five metres above the floor of the main chamber, where the column of breccia juts forward below the vertical wall that it presents higher up, we conducted excavation of a trial cutting in the lower part of sedimentary column, but the results to date have not been particularly informative.

CONCLUDING REMARKS

For a palaeoanthropologist, having two hominin sites only 100 kilometres apart is a dream come true! Quite apart from the potential of exciting new discoveries, the presence of 2 sites of sites of archaic European humans in contrasting environments opened up fascinating possibilities for comparing and contrasting how Neanderthal folk utilized the different environments and the natural resources they offered, namely the upland environment of *Cueva Negra* and the milder coastal one, even in the ice-age, of *Sima de las Palomas*.

RESEARCH GOALS AND HOW WE ACHIEVE THEM

Our 2014 field research will involve excavation at both *Sima de las Palomas* and *Cueva Negra*.

Our main objective at *Sima de las Palomas* is to continue to excavate, from above downwards, the hominin and stone-tool bearing sediment which forms a 20 metre-high column of breccia against the rear wall of the natural shaft. This is a technically complicated task. 100 years ago iron-miners entered the shaft and removed much of the sediment they found in it. They left behind a 20 metre-high column of breccia under a rocky overhang against the rear wall of the shaft.

In order to excavate the column of breccia scientifically, a 20-metre high scaffolding tower with platforms was built inside the shaft in 1994, and excavations in 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2009, 2010, 2011, 2012 and 2013 have already produced many important new hominin finds in early Late Pleistocene layers belonging to the early part of the last ice age.

Every morning we all walk up a steep, narrow footpath to the site. This takes about 15 minutes. Then, those helpers who excavate at the top of the column of breccia must also scramble up the hillside to the mouth of the shaft, which is covered by an iron grille. We open the grille and climb down a 3-metre ladder to the platform at the top of the tower. For safety, we wear stout boots because the hillside is steep and rocky and it is easy to sprain an ankle.

When we are excavating in our upper cutting here, we may wear safety harnesses which are belayed from the tower, and also hard hats. We trowel the fossil soil using small plasterers' trowels (with diamond-shaped blades) and sometimes we use surgical scalpels and fine dental probes. Any finds we make are placed on a plastic tray. Scientific excavation is a painstaking and delicate business, and cannot be hurried. When important finds are made, their position must be carefully measured before they can be removed.

The rest of the excavated soil is put in a bucket which we pass to helpers on the platform of the tower. They lower it down on an aerial ropeway. At the foot of the tower, other helpers empty the soil into wheelbarrows which they wheel out of the cave along the horizontal mine tunnel. The soil is then put in bags and carried on the backs of other helpers down to our 4-wheel-drive vehicle.

This is then driven 3 kilometres to the cutting sheds of the limestone quarrying company which owns the hill of *Cabezo Gordo*. Here, other helpers empty the soil over metal geological sieves which have a fine mesh, and then hose these with a jet of water so that the soil dissolves and leaves stones, flints, bones and other finds which we put into bags. Important finds have been made this way, such as the milk teeth of Neanderthal children.

After lunch, we wash all of the finds in bowls of clean water, leave them to dry, and later sort and them and put them into bags with appropriate labels. These will later be the object of future research in the lab, well after the expedition is over.

The first hypothesis we were testing (1994-2013) was that the upper part of the sediment does, indeed, contain remains of Neanderthal folk and associated Mousterian artifacts and food remains, from between 60 and 40,000 years ago.

Because it will be many years before our excavation, which is very slow, reaches the lowest part of the breccia column, in 2002 we began to excavate a small area about five metres above the floor of the main chamber, where the column of breccia juts forward below the vertical wall that it presents higher up, we conducted excavation of a trial cutting in the lower part of sedimentary column, but the results to date have not been particularly informative. For safety reasons, we only excavate this intermediate cutting after ceasing work in the upper cutting towards the end of each morning session. When we excavate here we use electric lamps run from car batteries which in turn are charged by a solar panel.

At *Cueva Negra* the immediate hypotheses we are testing are two-fold. First, we are exploring a widespread hypothesis (supported at other cave sites) that not only Neanderthals (*H. neanderthalensis*) but also their *pre-Neanderthal* forebears (*H. heidelbergensis*) carried out more day-to-day activities in areas that were well-lit by daylight, rather than in the darker innermost parts of caves, which receives support from our excavation of the important activity area from which the Acheulian hand-axe came. However, even more exciting is the 2011-2013 discovery of finds from a very deeply-lying deposit that demonstrate that fire was used at the site.

We walk up to the cave by a well-trodden footpath every morning. We carry out excavation at *Cueva Negra* by trowelling. Because the soil here is light in colour, unwanted foot-prints of boots and joggers show up in it all too prominently, so when we get to the cave in the morning we change out of such footwear and slip on very light slippers or plimsolls with absolutely flat soles and no tread at all. On the other hand, when we are wet-sieving the excavated sediment, we change footwear again, using gum-boots or rubber boots so that muddy sediment does not get on to our light slippers or plimsolls to be carried into the cave and onto the areas under excavation. Sometimes hand picks have to be used to break up the harder soil. Once again, we have the generator and power tools for use if needed.

The only way we can wash our soil here, in order to separate finds from the hard soil that encrusts them, is by pumping water up to the cave from the *River Quípar* which is 40 metres vertically below it. We do this using a petrol-driven pump, to pump water up through hose-piping to two large petrol drums; the hose-piping often springs leaks because of the high pressure of the water inside it. Helpers spend quite a lot of time scrambling up and down the steep hillside, in order to start up and stop the pump, re-prime it, or fix leaks in the hose-pipe!

Two very large oil drums are stood beside the cave mouth at a level slightly above that of our metal geological sieves onto which we put soil, so that other hose-pipes from their base let water run down by gravity to the sieves over which we play the water. We use four nests, each of which consists of 3 interlocking, stainless-steel, geological sieves of reducing mesh-size down to 2 mm mesh, one above the other, with the finest sieve being that at the bottom of the nest. We pick out the finds and save them. After lunch we wash them, and after they are dry we sort them and put them into labelled bags for future research.

APPLICATION OF RESULTS

WHO BENEFITS FROM OUR FINDINGS AND HOW?

Beneficiaries must include scientists and students concerned with *hominin evolution* and *palaeoanthropology* in the *later European Quaternary* because we are throwing new light on two matters: (a) the evolution of *Neanderthal Man*, and (b) the ways in which *Neanderthal Man* and his precursors, who are called *Homo heidelbergensis*, utilized natural resources in different ice-age environments. Our *Cueva Negra* and *Sima de las Palomas* researchers have therefore set up a new body:

MUPANTQUAT (MURCIAN ASSOCIATION FOR THE STUDY OF PALAEOANTHROPOLOGY AND THE QUATERNARY)

**NEW: MUPANTQUAT, MURCIAN ASSOCIATION FOR THE STUDY OF PALAEOANTHROPOLOGY AND THE QUATERNARY (Asociación Murciana para la Paleoantropología y del Cuaternario) <http://www.mupantquat.com>
Email: <mupantquat@gmail.com>**

The **MUPANTQUAT** association was established and registered officially in June 2012 following advice from Murcia's Director-General for Cultural Heritage, in order both to oversee the research at our two sites of *Cueva Negra del Estrecho del Río Quípar* and *Sima de las Palomas del Cabezo Gordo*, and to disseminate information to the general public about palaeoanthropology and the Quaternary. In 2013 an Agreement of Collaboration with Murcia University was signed. The Chair of MUPANTQUAT is Murcia University's Michael Walker, and his co-directors of the Field School and excavations are archaeologist Mariano López Martínez (Secretary, MUPANTQUAT) and archaeologist and palaeoanthropologist Dr María Haber Uriarte (Vice-Chair, MUPANTQUAT) who teaches at Murcia University. The committee of MUPANTQUAT has as its Treasurer Jesús García Torres who helps our excavations in liaising with the media, in which he has wide professional experience; he teaches at Murcia's Catholic "San Antonio" University. Other MUPANTQUAT committee members are Palaeolithic archaeologist Dr Ignacio Martín Lerma who teaches at Murcia University; Antonio López Jiménez (Murcia University biologist, preparing a PhD thesis on Quaternary micromammalian fossils), Jon Ortega Rodríguez (Autonomous University of Madrid biologist, specializing in Neanderthal skeletal restoration and reconstruction for a Murcia University PhD thesis), and Murcia University archaeologist Ignacio Martín Lerma whose doctoral thesis from the National University of Education at Distance in Madrid (equivalent to the UK's Open University) was on microscopic use-wear analysis of Palaeolithic stone tools. Our association has several other university teachers and high-school teachers among its membership; they include Murcia University's palaeopalynologists Professor José Carrión and Dr Santiago Fernández, analytical chemist Dr Juan Luis Polo, and palaeontologist Dr Gregorio Romero, and Cartagena Polytechnic University geologists and engineers Drs Tomás Rodríguez Estrella, Ignacio Manteca and José María Cano. Several of these members give talks at our annual Field School or help with research on material from the excavations.

OUR PROJECT BENEFITS THE EDUCATIONAL COMMUNITY:

Our field and lab research has an educational impact that reaches out to schools and local institutions in the following ways:

2012-2013 EDUCATIONAL TALKS WITH SHOWING OF ANIMATED FILM “CUEVA NEGRA”

Our **MUPANTQUAT** association is cooperating actively with Murcia regional government's public “Integra Foundation” which has produced an animated 30-minute film with us about Cueva Negra, called simply “*Cueva Negra*”. It is aimed at a teen-age audience, and seems to be going down well! Since its first showing in October 2012, **MUPANTQUAT** and the “Integra Foundation” are showing it in towns and cities in our region to the general public, with free entry. After each showing there is a public **MUPANTQUAT** Colloquium with a couple of brief talks by us about our findings, after which the public can ask questions which we do our best to answer. I think you may be able to access the film on http://www.regmurcia.com/servlet/s.SI?sit=a,0,c,0,m,0&r=AgP-24607-DETALLE_EVENTO.

MUPANTQUAT has organized a series of 2013 field excursions to our sites, and also to other relevant sites in the region, for both high-school students and university undergraduates, as well as for its own membership, and it is organizing a programme of public lectures and talks on appropriate topics. **MUPANTQUAT** offers a reduced subscription to student members and we encourage undergraduate participation in the field and lab.

MUPANTQUAT has several university teachers and high-school teachers among its membership. The educational community is very much interested in the common humanity of our species and of its origins. Human evolution, over 100 years after Darwin, is only now ceasing to be the Cinderella of the sciences, thanks to 30 years of unceasing palaeoanthropological research around the globe.

An outstanding question -- which has been the topic of more than one very recent book -- concerns the relation between our modern world-wide species of *Homo sapiens* and some earlier forms that were present not so long ago during the last ice age, such as *Neanderthal Man*. How alike or unlike were they? How related or unrelated are they? When and where did their common ancestors begin to go their separate ways? Did they behave differently, particularly with regard to utilization of local resources? Did the ancestors of modern people become skillful hunters who used foresight, while *Neanderthals* died out because they could not use foresight and were usually scavengers whose “hunting” amounted to no more than unplanned skirmishes with large game? These are intriguing questions the project is beginning to throw light on: for instance, our very recent palaeolithic discoveries at *Cueva Negra* show that a million years ago even *pre-Neanderthals*, known to palaeoanthropologists as *Homo heidelbergensis*, could pick and choose, at will, between alternative core-reduction knapping sequences, depending on whether they wanted to make core-tools (such as hand-axes) or flake-tools (for subsequent edge-retouch) out of local stones.

PUBLICATION AND DISSEMINATION OF OUR FINDINGS:

Our Cueva Negra and Sima de las Palomas research team and **MUPANTQUAT** are involved in a several forms of dissemination of our work. Here are a some of them.

COMING SOON TO A BOOKSHOP NEAR YOU: “HOW THE EARLIEST CAVE-FOLK OF SOUTH-EAST SPAIN WERE DUG UP”

We are putting the finishing touches to the manuscript and illustrations of a semi-popular semi-scientific book about how we have excavated, investigated and researched into early humans in southeastern Spain. A preliminary version of the English text is with the editorial team of our UK publisher Oxbow Books at Oxford and we hope they will produce it in 2014. We have proposed the title as “*How the Earliest Cave Folk of South-East Spain were Dug Up*”. The Spanish edition of the book will go to press here at Murcia at the end of 2013 and the publisher here will be our new association **MUPANTQUAT**. The book is aimed at young people, and takes a “hands-on” approach, emphasizing, with plentiful illustrations, *how* we have carried out the work, what methods and techniques we have employed in the laboratory and in the field, instead of placing the emphasis on the significance of our findings in an academic context of human evolution in the Old World during the Pleistocene. We hope the book will be attractive to high-school students and their teachers, and perhaps useful to first-year university undergraduates and college students, as well as being accessible to general readers interested in exactly *how* we know what we know about the distant past. We do not want to present an erudite weighty tome, only of interest to a specialized readership of scholars and academics (such learned volumes go unread as often as they then soon become remaindered as discount “bargain” offers).

We both publish and present at meetings our scientific findings in both English and Spanish, and you will find a list of these below. Some are in scientific journals with high international impact; others are aimed at a wider readership, including undergraduates, including presentations at congresses of specialists or other meetings of particular interest-groups. Some of these are international or national, but others are local. We are also preparing enormous detailed monographs on each of our two sites.

However, we also present our findings to international and national media. In January 2013 PBS-NOVA showed a TV documentary in English “*Decoding Neandertals*” in which we took part in 2012 (try <http://video.pbs.org/video/2323758207>); and in 2011 ARTE-XENIUS showed a TV documentary “*Neandertaler*” in German and French in which we took part in 2011. In 2010-11 we took part in the Spanish national television (TVE) documentary series ARQUEOMANIA and a new 4-part series, ARQUEOMANIA DOSSIERES was shown in October 2013 in which we have taken part also. An hour-long film in Spanish was made in 2004 which features Sima de las Palomas del Cabezo Gordo, called “*Piedra sobre piedra*” (“*Stone upon stone*”), directed and produced by a Murcian, Roque Madrid, for his Madrid-based production company CUARTOCRECIENTE, and sold to the international channel of Spanish national television (TVE) whose HISPASAT satellite beams to a wide audience in Latin America (the film was shown over 10 times). In June 2011 Spanish national television (TVE “Tres-14”) put out an hour-long programme (“*Lo que nos une a los neandertales*”) of interviews at Barcelona University with each of the six speakers, M.J. Walker included, in the special seminar on Neanderthals in the Iberian Peninsula

held as part of the XVII Congress of the Spanish Society for Physical Anthropology. Our sites have been the object of visits by radio and TV crews, and every year since 1994 broadcasts have been made by both public and private radio and TV stations: *BBC*, *RTVE*, *Onda-Cero*, *Ser*. In 2005 our excavation of Neanderthal leg and foot bones at Sima de las Palomas was covered on prime-time TV news by Spanish national television which in 2003 gave similar coverage to both the discovery of the *Cueva Negra* hand-axe and the excavation of a child's mandible at *Sima de las Palomas*. In December 2003 the popular radio-presenter Nieves Herrero had M.J. Walker on her two-hour chat show on Spanish national radio *RNE*.

A gratifying event during our 2010 field season was a two-day visit by scientific journalist Rosa Tristán of Spain's second-largest circulation daily newspaper, *El Mundo*, which ran a full 3-page spread by her about both our sites in its Sunday science supplement, with the partly-cleaned juvenile Neanderthal skull and mandible we had excavated in 2008 at Sima de las Palomas occupying the whole cover page. It was the first time we have attracted so much public attention in the national press. In 2011 *El Mundo* featured our discovery of fire at Cueva Negra, and *La Verdad* gave a two-page coverage to a press conference in Murcia in honour of the visit here by Professor Erik Trinkaus.

Another national publication about current scientific research of all kinds in Spain and whose web-site is greatly visited by scientists and high-school teachers here also put out an article in Spanish by us in October 2010 about both our sites which has received A FEW thousand hits <http://www.aecientificos.es/escaparate/verpagina.cgi?idpagina=20630480&refcompra=>, or you can go to <http://www.aecientificos.es>, then click on Artículos de Interés Científico, the article on the web has several colour illustrations; the journal is called *Acta Científica y Tecnológica* and our article is now in print in two parts in its volumes 18 and 19 for 2011 (see our list of publications).

Ten years ago we successfully undertook a very different kind of public enterprise, which was the **TRAVELLING PUBLIC EXHIBITION** about our sites and research at them, called: "**Archaic Europeans and Neanderthals: Project HOMO, Hominins, Technology and Environment in the Middle and early Upper Pleistocene**" which was all about our work at **Cueva Negra** and **Sima de las Palomas**, and travelled around the European Union, because it won funding from the **European Commission's** "Culture 2000" Programme (2000-0820CLTCA1A) so that the Commission paid for half (€150,000 euros) of its cost, the other half coming from the participating institutions that have agreed to display it, namely Murcia's Museo de la Ciencia y del Agua (Science and Water Resources Museum) where it was open to the public in 2002 for three months, the Austrian national Museum of Natural History at Vienna where the exhibition was unveiled for the first time in October 2001, the "Dr.M.Crusafont" Palaeontological Museum of Barcelona at Sabadell which displayed it during 2002, the Oxford University Museum of Natural History which showed it from September to Christmas 2002, and, near to our Sima de las Palomas site in Murcia, at the old Town Hall of Torre Pacheco where it was in Spring of 2003. After that it went to Logroño in northern Spain, and in October of 2003 it opened at the splendid Science Museum at San Sebastián in northern Spain's Basque Country for a six-month showing. Later in 2004 it was shown in the spacious foyer of Murcia University Library for three months, after which it visited a town in Murcia called Abarán. Currently it is displayed near to Sima de las Palomas in the town of Torre Pacheco. This exhibition has given research at our two sites great publicity around Europe – it received hundreds of visits from groups of high school students in all the centres where it was on display. I am not sure but perhaps you may be able still to open up a slot on the web about it at <http://www.contraplano.es/homo>

Various public lectures and exhibitions:

Over the years I have given several lectures about the twenty years of field research at Cueva Negra and Sima de las Palomas. In April 2013 I gave an invited talk about "*The Sima de las Palomas Neanderthals*" at the 55th Annual Meeting of the international Hugo Obermaier Society for Quaternary Research and Archaeology of the Stone Age, held at Vienna's imposing Natural History Museum, and in April 2012 I addressed the 54th Annual Meeting on "*Fossil Man in SE Spain*" at the Toulouse Natural History Museum. In June 2011 I presented a paper about both our sites in a monographic seminar on *Neanderthals in the Iberian Peninsula* during the XVII Congress of the Spanish Physical Anthropological Society held at Barcelona University, and in November I presented a paper on each of our sites during a week-long series of lectures on regional archaeology at Murcia's Archaeological Museum. In September 2010 I gave a lecture about Cueva Negra during the Sixteenth Annual Meeting of the European Association of Archaeologists at the Hague in a Session on Palaeolithic Chronologies which I co-organized with Oxford's Dr Tom Higham. In September 2009 I gave a lecture about Sima de las Palomas during the Fifteenth Annual Meeting of the European Association of Archaeologists at Riva del Garda, Italy, in a Session on the Middle and Upper Palaeolithic. In 2009 I also gave lectures about both our sites at the Society of Antiquaries of London of which I am a Fellow, and also at meetings in Spain, namely, at a symposium organized at Murcia by a leading bank here in honour of Charles Darwin, as well as at the Universidad Miguel Hernández at Elche, at the Cieza Museum in Murcia, and a lecture about Human Evolution at Murcia's Science and Water Resources Museum. In 2008 I gave public lectures about the sites at the Murcia Archaeological Museum in a series of lectures organized in association with an exhibition of the region's palaeontology, and another at a symposium at Orce, Granada, in honour of the late Dr Josep Gibert.

During the past decade I directed the scientific content of a travelling European Union public exhibition about our sites and research at them, called "**Archaic Europeans and Neanderthals: Project HOMO, Hominids, Technology and Environment in the Middle and early Upper Pleistocene**", which is all about our work at Cueva Negra and Sima de las Palomas, and is now travelling around the European Union, because it won financial support from the European Commission's "Culture 2000" Programme (2000-0820CLTCA1A) so that the Commission paid for half (€150,000 euros) of its cost, the other half coming from the participating institutions that have agreed to display it, namely Murcia's Museo de la Ciencia y del Agua (Science and Water Resources Museum), the Austrian national Museum of Natural History at Vienna (where the exhibition opened in October 2001), the Palaeontological Museum of Barcelona at Sabadell, the Oxford University Museum of Natural History (where it was on show between September 19th and Christmas, 2002), and the town council of Torre Pacheco in Murcia where it went on show on February 23rd 2003 and where it is now back on show in 2005. Later in 2003 it went to Logroño in northern Spain, coinciding unfortunately with the start of our *Cueva Negra* excavation in July. However, when in October it went for six months to the splendid Science Museum at San Sebastián in northern Spain's Basque Country, I gave a lecture to accompany the opening there. Later in 2004 it was shown in the spacious foyer of Murcia University Library for three months and in the Autumn of 2004 it visited a town in Murcia called Abarán at the invitation of the mayors of 6 towns who clubbed together to show it. In each case I have been present to introduce the opening to gatherings of the general public. This exhibition is giving research at our two sites great publicity around Europe – it receives hundreds of visits from groups of high school students in all the centres where it is on display. You may perhaps still be able to open up a slot on the web about it at <http://www.contraplano.es/homo>

In April 2007 I gave a talk about our research at Sima de las Palomas and Cueva Negra at the invitation of Professor Svante Paäbo, the internationally renowned geneticist who conducts research into both mitochondrial and nuclear DNA from Neanderthal bones, who is the Director of the ultra-modern, seven-storey-high, Max-Planck Institute for Evolutionary Anthropology at Leipzig in Germany, and whom I had first got to know at a meeting in Madrid back in 1993. The talk was well received and Svante Paäbo made useful suggestions about how we might best excavate the *Sima de las Palomas* Neanderthal skeletal remains, wearing face-masks and surgical gloves, and putting the fossils into sterile containers. This we did in summer 2007 and in the autumn Svante's PhD student, Oxford University Biology graduate (now Dr) Adrian Briggs, came to Murcia and we helped him as he extracted samples from our newly-excavated Neanderthal bones in a sterile operating theatre in Murcia University's Veterinary Science Faculty. Later on, he reported back from Leipzig that our excavation technique had been so good that almost no modern human DNA contamination could be detected, though so far, alas, neither has any Neanderthal DNA been identified – possibly because too few samples were taken by him and they may have been too small anyway (less than 200 miligrams each) given the high ambient temperature at *Sima de las Palomas* which may predispose to break up of the nucleotide fragments of DNA.

In September 2006 I gave a presentation entitled "The Demise of the Mysterians" based on our Cueva Negra research, in Colloquium 13 ("The Earliest Inhabitants of Europe") at the XV Congress of the International Union of Prehistoric and Protohistoric Sciences at Lisbon. In November 2005 I gave a lecture about our work at Cueva Negra and Sima de las Palomas at Oxford University's Institute of Archaeology in its Quaternary Seminar Series. In February 2006 I gave lectures on that work at Barcelona University and at Castellón.

My European travels in 2004 (see above) in order to gain support for the projected regional Museum for Paleontology and Human Evolution took up much of my spare time and energy that year, to the exclusion of other activities such as delivering public lectures, other than to local meetings of archaeologists and anthropologists at Murcia. I gave an invited lecture about our research at Oxford University's Institute of Archaeology in November 2005. I gave a public lecture at the San Sebastián Science Museum in October 2003 and in February 2002 I gave one at Murcia's Science and Water Resources Museum. In 2001 I gave several public lectures at places which included Oxford University, the XIV International Congress of Prehistoric and Protohistoric Sciences which was held at Liège in Belgium, at the Austrian national Natural History Museum in Vienna. In November 2000, I gave a major lecture about human evolution during the Middle and earlier Upper Pleistocene, at an international scientific meeting in Valencia organized by the Spanish governmental institution known as the Menéndez Pelayo International University. Other participants included Professor Bernard Wood of the Washington University and Professor Günter Bräuer of Hamburg University, as well as Mexican and Spanish scientists, including Emeritus Professor Emiliano Aguirre.

In 2000 national governmental recognition of our field research, by granting us R&D Project PB98-045, assisted us to acquire new international contacts and collaboration, as well as maintaining pre-existing ones, and most particularly favoured our obtaining the royal patronage of His Majesty King Juan Carlos I of Spain who graciously accepted Honorary Chairmanship for the (December 6-19, 2000) *International Colloquium and Workshop "The Iberian Peninsula and Human Evolution", A Symposium in Honour of Professor Phillip V. Tobias, F.R.S.*" which I organized at Murcia. Professor Tobias, who was 75 in 2000, flew to Murcia from South Africa to take part, where he is Emeritus Professor of the Witwatersrand University at Johannesburg and still directs its Palaeoanthropology Research Group. He is a frequent visitor to Spain. He gave a splendid address on "The role of water in the extra-African dispersal of humanity, with special reference to the peopling of the Iberian Peninsula." The programme included official visits to our sites of the Sima de las Palomas of Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar, on which I also gave an address entitled "Neanderthal Man in Murcia: Cueva Negra del Estrecho del Río Quípar and Sima de las Palomas del Cabezo Gordo."

Other participants gave addresses as follows. Professor Geoffrey A. Clark of the University of Arizona State University gave an address on "Modern human origins research: putting Iberia in a global context." Professor Derek A. Roe of Oxford University gave an address on "The Iberian Peninsula in the Palaeolithic: an outsider's view." The orthodontal surgeon and dental anthropologist Dr Vincent A. Lombardi, from Pittsburgh, gave an address on "Dental anthropology and Neanderthal Man." Drs Joao Zilhao and Cidalia Duarte of the Portuguese government's Archaeological Institute gave an address on "The Lagar Velho child: burial anatomy and implications for modern human origins in Iberia." Professor Camilo José Cela Conde of the University of the Balearic Islands, a Fellow of the American Association for the Advancement of Science, gave an address on "Just how stupid was *Homo habilis*? Problems over a suitable taxonomy of Pliocene hominins." Dr José Gibert Clots of the "Dr M. Crusafont" Palaeontological Institute of Barcelona gave an address on "Cueva Victoria at Llano del Beal, Cartagena, Murcia". Professor Enrique García Olivares of Granada University gave an address on "Molecular palaeontology: The study of biomolecules in fossils." Professor Daniel Turbón of Barcelona University gave an address on "Ancient DNA in the Iberian Peninsula". Professor José Enrique Egocheaga of Oviedo University gave an address on "Preliminary results of palaeoanthropological research into the Cueva de El Sidrón Neanderthals." Professor Ignacio Martínez of Madrid's Complutensian University gave an address on "The evolution of mind" on behalf of himself and Professor Juan Luis Arsuaga (who at the last minute was unable to attend because of another pressing commitment).

In 1997 I gave invited lectures to the Spanish National Archaeological Congress, at Harvard's Peabody Museum, and at University College London's Institute of Archaeology, while in 1996 I gave a lectures at Oxford University's "Baden-Powell" Quaternary Research Centre, at the *International Symposium in Honour of Professor Phillip Tobias FRS* held at the University of the Balearic Islands at Palma de Mallorca, and at the Cartagena Cultural Centre at Cartagena, as well as during a week-long Murcia University Summer School to 40 international students on *Human Evolution and Palaeoanthropology* in September at which other leading Spanish scientists took part (Professors Emiliano Aguirre, Daniel Turbón, José Gibert and José Camilo Cela Conde) as well as other junior researchers (Drs Francisc Ribot and Miguel Martínez Andreu, Ms Florentina Sánchez, and Mr. José Isaac Serrano). In 1995 I gave two public lectures at the invitation of the municipal authorities of Torre Pacheco and another lecture and an exhibition at the invitation of those of Caravaca. I also gave invited scientific lectures at the Murcian Regional Archaeological Week (two lectures and an exhibition), at the Autonomous University of Barcelona (a lecture), at Barcelona University (a lecture), and at the *International Conference on Human Palaeontology* at Orce (two lectures and an exhibition, and I also guided an excursion to *Sima de las Palomas*). I also organized an exhibition at Murcia University's "Biology Week" and a guided excursion to *Sima de las Palomas* for Murcia University's Summer School on "Archaeology of Death". In 1994 I gave several lectures on the two sites in England during my period as Oxford University Visiting Senior Research Fellow in Archaeology (3 in Oxford, one at the Natural History Museum in London, another at London University and yet another at Liverpool University. In most years since 1991, I have addressed the Murcia regional government's week-long symposium held at Murcia at which archaeological field research during the previous twelve months is presented in public.

SOME RECENT PUBLICATIONS AND PRESENTATIONS:

Since 2005 very important developments in research at both our sites have led to such significant changes in the way we understand them that most articles with publication dates earlier than 2008 are so out-of-date as to be now misleading in many respects (they can be found in my C.V. at the end of [Briefing You](#)) and they have been wholly superseded by later publications of which the following are the main ones that we recommend (pdfs of most of these are available on request to us):

- 2013 M.J.Walker, M.V.López-Martínez, J.S.Carrión-García, T.Rodríguez-Estrella, M.San-Nicolás-del-Toro, J-L.Schwenninger, A.López-Jiménez, J.Ortega-Rodrigáñez, M.Haber-Uriarte, J-L.Polo-Camacho, J.García-Torres, M.Campillo-Boj, A.Avilés-Fernández, W. Zack: "Cueva Negra del Estrecho del Río Quípar (Murcia, Spain): A late Early Pleistocene hominin site with an "Acheulo-Levalloiso-Mousteroid" Palaeolithic assemblage" *Quaternary International* 294 135-159 (ISSN 1040-6182).
- 2013 (in press) W.Zack, A.Andronikov, T.Rodríguez-Estrella, M.López-Martínez, M.Haber-Uriarte, V.Holliday, D.Lauretta, M.J.Walker: "Stone procurement and transport at the late Early Pleistocene site of Cueva Negra del Estrecho del Río Quípar (Murcia, SE Spain)" *Quartär, Internationales Jahrbuch zur Eiszeitalter- und Steinzeitforschung, International Yearbook for Ice Age and Stone Age Research* vol. 60 (ISSN: 0375-7471)
- 2013 D.Angelucci, D.Anesin, M.López-Martínez, M.Haber-Uriarte, T.Rodríguez-Estrella, M.J.Walker: "Rethinking stratigraphy and site formation of the Pleistocene deposit at Cueva Negra del Estrecho del Río Quípar (Caravaca de la Cruz, Spain)" *Quaternary Science Reviews* 80: 195-199 (ISSN: 0277-3791)
- 2013 D.C.Salazar-García, R.C.Power, A.Sanchis Serra, V.Villaverde, M.J.Walker, A.G.Henry: "Neanderthal diets in central and southeastern Mediterranean Iberia" *Quaternary International* 318: 3-18 (ISSN: 1040-6182)
- 2012 M.J.Walker, M.V.López-Martínez, J.Ortega-Rodrigáñez, M.Haber-Uriarte, A.López-Jiménez, A.Avilés-Fernández, J.L.Polo Camacho, M.Campillo-Boj, J.García-Torres, J.S.Carrión-García, M.San Nicolas-del Toro, T.Rodríguez-Estrella: "The excavation of the buried articulated Neanderthal skeletons at Sima de las Palomas (Murcia, SE Spain)" *Quaternary International* 259: 7-21 (ISSN: 1040-6182).
- 2012 M.Walker, M.López Martínez, M.Haber Uriarte, A.López Jiménez, A.Avilés Fernández, M.Campillo Boj, J.Ortega Rodrigáñez: "Nuevos esqueletos neandertales y restos preneandertales de Murcia: La Sima de las Palomas del Cabezo Gordo (Torre Pacheco) y la Cueva Negra del Estrecho del Río Quípar (Caravaca de la Cruz)" pp. 47-67 in D.Turbón, L.Fañanás, C.Rissech, A.Rosa (eds), *Biodiversidad Humana y Evolución (Actas del XVII Congreso de la Sociedad Española de Antropología Física, Universidad de Barcelona, 2 a 4 de junio de 2011)*. Barcelona, Universitat de Barcelona and Sociedad Española de Antropología Física (ISBN 9788469563229, 9788469563236).
- 2011 M.J.Walker, M.López Martínez, M.Haber Uriarte, J.Ortega Rodrigáñez: "La Sima de las Palomas del Cabezo Gordo en Torre Pacheco: Excavación e Investigación en 2011" *Verdolay. Trinkaus, "Late Neanderthals in Southeastern Iberia: Sima de las Palomas del Cabezo Gordo, Murcia, Spain" *Proceedings of the National Academy of Sciences USA* 105 (52): 20631-20636.

FIELD TRAINING

Topics covered by me in informal lectures, on-site briefings, and guided excursions to helpers and staff assistants include:

- *** excavation methodology and practice
- *** treatment and classification of finds
- *** fundamentals of hominin and human evolution
- *** Quaternary landscapes
- *** Palaeolithic archaeology and stone tools
- *** *Sima de las Palomas* and *Cueva Negra* in their context
- *** flora and fauna of the ice age
- *** field excursions to other Quaternary or archaeological sites, museums, and places of historical interest.

YOUR SCHEDULED ACTIVITIES

Each 3-week period will begin on Day 1 (arrival day, Tuesday) with rendez-vous at Murcia-San Javier National Airport (we start and finish on Tuesdays because there are not only connecting *Iberia (Air Nostrum)* flights from Madrid and Barcelona on weekdays for intercontinental travellers arriving in Spain from the U.S.A, Australia or elsewhere (there are no connecting *Iberia (Air Nostrum)* flights on Saturdays and Sundays), but also numerous low budget flights from the U.K. and some other E.U. countries. The following low budget airlines fly in to Murcia-San Javier, or have flown recently (the economic crisis has led to a reduction in flights and companies flying to Murcia-San Javier): *Bmibaby* (from Birmingham), *Easy-Jet* (from London-Gatwick and Bristol), *Flybe* (from Birmingham, Exeter, Southampton, and Norwich), *Flyglobespan* (from Edinburgh), *Jet2.com* (from Edinburgh, Blackpool, Leeds-Bradford, and Newcastle), *Virgin Express* (from Brussels), *Ryanair* (Dublin, London-Stansted, London-Luton, Bremen, Glasgow-Prestwick, Liverpool, Nottingham-East Midlands). We do not know which airlines will be flying still in June-July 2014 let alone their schedules; even *Ryanair* has said it may reduce the number of flights.

If helpers so wish, Day 2 (Wednesday) will be devoted to orientation, settling in, visiting the site, and free time when you can shop and get to know the town where they are based: namely, *Caravaca de la Cruz* (first period); and *Dolores de Pacheco* or nearby seaside towns such as *Santiago de la Ribera*, *Los Narejos* or *Los Alcazares* (second period). However, we have usually found that many helpers, after getting to the site by mid-morning on Day 2, prefer to get stuck in straightaway by working lightly there until lunch-time, and then to have half a morning free on some *other* day in order to buy gifts at stalls in the popular out-door weekly markets that are held in every Spanish village, town and city (just as in many other European countries) because their prices are often lower than in the shops (which, of course, are also open for shopping at the same time) - there are no nearby out-door markets on Day 2 (Wednesday). Each group will therefore be asked how it prefers to have Day 2 and its wishes will be respected.

Days 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21 (Thursday, Friday, Saturday, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, Monday,) are all potential working days, though we shall most certainly have some excursions and rest days among them! We often work on Saturday and Sunday so as to prevent a possibility of interference with our unattended excavation equipment by uninvited weekend visitors and day-trippers in our absence. However, one day in each three-week period will be used for day-long excursions to sites of interest. The first one will probably be a visit to mesolithic rock paintings in Murcia or Albacete. The second one will probably be a visit to *Cartagena* and perhaps *Cueva Victoria* or, if they prefer, the city of *Murcia*. Day 22 (Tessday) is departure day (when there will probably be a chance in the morning for helpers at *Cueva Negra* to visit *Sima de las Palomas* provided their flight back home from Murcia-San Javier Airport is after lunch).

Also, we do find it sporadically necessary to have a rest and recreation (R&R) day, particularly in the second period for the benefit of the senior site helpers who needs a little time to themselves after having already been some weeks in the field at everybody's beck and call. On these R&R days, other helpers may explore their surroundings by themselves (we can tell them how to hire cars should they wish to do so and lend them maps) or simply laze the day away restfully and take their meals as usual. The P.I. and senior site helpers from Murcia will *not* usually be available on such R&R days.

DAILY SCHEDULE

A typical daily schedule of a working day might be roughly as follows:

- 07.00 Reveille
- 07.30 *Light breakfast* of coffee, bread roll, cereals, fruit juice.
- 07.45 Leave for site in vehicles
- 08.30 Begin work at site
- 11.00 *Mid-morning break for sandwich*
- 11.30 Restart work
- 13.45 Clean up at site, return to vehicles and to accomodation
- 14.15 Shower and change
- 15.15 *Luncheon*
- 15.45 Comments on day's work, briefing for next day
- 16.00 Siesta (afternoon nap)
- 17.30 Washing, ordering and bagging of finds
- 20.00 Informal talk, discussion, or free time
- 21.00 *Dinner*
- 21.45 Free time

I have followed a similar schedule in southeastern Spain since 1980 and find it well suited to the hot climate which is unsuitable for work between about 14.00 and 17.30 hours. It has been a successful schedule for archaeological excavations carried out at Murcia University for 30 years.

DAY-BY-DAY FIELD SCHOOL PROGRAMME AND TEAM DEVELOPMENT

Team development is assisted by daily sessions after lunch when resumés of the day's activities and briefings for the next day can be commented on. The daily sessions after siesta when we are washing and sorting finds also bring everybody together in one place involved in common activities related to the finds from the day and sorting those which have dried out from the previous day. These work sessions may be followed by one of the three talks I give to each group: about the Project itself, about Plio-Pleistocene Human Evolution, and about the origin and evolution of Neanderthals. On other days, there is time for leisure and relaxation before dinner. On other than R&R days, and whenever administrative matters do not demand that I absent myself after 20.00 hours, I have tried to be present with the group upto and during Dinner and quite often I have joined with all our members after Dinner in visiting local entertainments. Increasingly administrative and representational obligations intrude on my time, when my co-directors María Haber and Mariano López take full charge. Very many senior site helpers join in after-dinner events and our new helpers usually have a good time with them.

It is anticipated that helpers will take part in guided excursions to archaeological and historical sites of interest. I have found these to offer excellent opportunities for group development in surroundings which provide a complete alternative to those of the work situation at our two sites. Everybody gets to know not only each other, but also something new, interesting and different. We try to take in local bars and eating places, and sample local food and wine.

The following gives a rough day-by-day idea of what the Field School programme will look like, though the final day-by-day programme will probably be finalized only in May or June 2014:

(Morning activities: 07.30-14.00 hours; afternoon activities: 17.30-21.00 hours)

SESSION 1: July 1st-22nd Cueva Negra excavation and Caravaca field base

Day 1 (Tuesday)

Afternoon/evening: Airport pick-up and transport to Caravaca field base.

Day 2

Morning: open and set up the Cueva Negra excavation.

Afternoon: talk about *The "Cueva Negra-Sima de las Palomas" Research Project* (Michael Walker).

Day 3

Morning: excavation at Cueva Negra; instruction in field techniques, wet-sieving, recording finds, etc.

Afternoon: showing of animated film "*Cueva Negra*"; instruction in field lab; sorting finds.

Day 4

Morning: excavation at Cueva Negra; instruction in field techniques, wet-sieving, recording finds, etc.

Afternoon: free time (no afternoon lab).

Day 5

Morning: excavation at Cueva Negra; visit to Roman temple remains at nearby La Encarnación.

Afternoon: sorting finds in lab; talk-seminar on *Human Evolution from the Pliocene to the Middle Pleistocene* (Michael Walker).

Day 6

Morning: excavation at Cueva Negra; visit to chert outcrop 800 m from the cave.

Afternoon: sorting finds in lab; brief talk about excavating the Caravaca *Camino del Molino Neolithic burial chamber with 1,300 crania and skeletal remains* (María Haber and Mariano López).

Day 7

Morning: excavation at Cueva Negra; anyone wanting to go shopping at Caravaca's open market can be taken into town at 10.30 am.

Afternoon: free time (no afternoon lab); optional excursion to collect chert at Collado del Gitano outcrop.

Day 8

Morning: excavation at Cueva Negra.

Afternoon: seminar *Faunal Remains and Biostratigraphy at Cueva Negra* (Antonio López, Azucena Avilés, Ángel Buitrago); sorting finds in lab.

Day 9

Excursion to see prehistoric rock paintings; picnic lunch at Nerpio swimming pool (no morning excavation, no afternoon lab).

Day 10

Morning: excavation at Cueva Negra.

Afternoon: workshop on *Flint-knapping* (Mariano López Martínez); sorting finds in lab.

Day 11

Morning: excavation at Cueva Negra.

Afternoon: seminar on *The Evolution of the Human Brain and of the Early and Middle Pâlaeolithic* (Michael Walker); sorting finds in lab.

Day 12

Morning: excavation at Cueva Negra.

Afternoon: seminar on *Use-wear Analysis and Stone Tools* (Ignacio Martín); sorting finds in lab.

Day 13

Morning: excavation at Cueva Negra.

Afternoon: sorting finds in lab.

Day 14

Free time all day (no morning excavation; no afternoon lab)

Day 15

Morning: excavation at Cueva Negra.

Afternoon: seminar on *Pollen Analysis and Quaternary Climate* (José Carrión and Santiago Fernández); sorting finds in lab

Day 16

Morning: excavation at Cueva Negra.

Afternoon: sorting finds in lab.

Day 17

Morning: excavation at Cueva Negra; Press Conference Meet-the-Media at Cueva Negra.

Afternoon: seminar on *Fire and Flint at Cueva Negra* (Michael Walker); sorting finds in lab.

Day 18

Morning: excavation at Cueva Negra.

Afternoon: sorting finds in lab.

Day 19

Morning: excavation at Cueva Negra.

Afternoon: inspection of flint tools from Cueva Negra at Caravaca Municipal Archaeological Museum; sorting finds in lab; Open Round Table of staff and helpers to evaluate Session 1.

Day 20 (Sunday)

Morning: *Open Day* at Cueva Negra.

Afternoon: free time (no afternoon lab).

Day 21

Close up excavation and field lab; take down and pack up equipment and finds;

Day 22 (Tuesday)

Helpers who are leaving are taken to see Sima de las Palomas and then to the airport. Finds are taken to Murcia and equipment to Dolores de Pacheco.

SESSION 2: July 22nd–August 12th at Sima de las Palomas excavation and Dolores de Pacheco field base

Day 1 (Tuesday = Day 22 of Session 1) Airport pick-up and transport to Dolores de Pacheco field base.

Day 2

Morning: open and set up the Sima de las Palomas excavation.

Afternoon: talk about *The “Cueva Negra-Sima de las Palomas” Research Project* (Michael Walker).

Day 3

Morning: excavation at Sima de las Palomas; instruction in field techniques, wet sieving, recording finds.

Afternoon: instruction in field lab; sorting finds.

Day 4

Morning: short excavation (8-10.30am) at Sima de las Palomas; excursion to Cueva Negra for whoever has never been there before.

Afternoon: seminar on *Cleaning and Scanning the Sima de las Palomas Neanderthal Skeletons* (Jon Ortega); sorting finds in lab.

Day 5

Morning: excavation at Sima de las Palomas; instruction in field techniques, wet-sieving, recording finds, etc.

Afternoon: seminar on *Use-wear Analysis and Stone Tools* (Ignacio Martín); sorting finds in lab.

Day 6

Morning: excavation at Sima de las Palomas; instruction in field techniques, wet-sieving, recording finds, etc.

Afternoon: sorting finds in lab; *Faunal Remains from Sima de las Palomas* (Antonio López, Azucena Avilés and Ángel Buitrago).

Day 7

Free time all day (no morning excavation; no afternoon lab)

Day 8

Morning: brief visit to new Museum of Palaeontology and Human Evolution; excavation at Sima de las Palomas.

Afternoon: sorting finds in lab.

Day 9

Morning: excavation at Sima de las Palomas.

Afternoon: sorting finds in lab; seminar on *The Neanderthals* (Michael Walker)

Day 10

Morning: excavation at Sima de las Palomas.

Afternoon: sorting finds in lab.

Day 11

Morning: excavation at Sima de las Palomas.

Afternoon: seminar on *Pollen Analysis and Quaternary Climate* (José Carrión and Santiago Fernández); sorting finds in lab

Day 12

Morning: excavation at Sima de las Palomas.

Afternoon: sorting finds in lab.

Day 13

Morning: excavation at Sima de las Palomas.

Afternoon: seminar on *Neanderthals in Spain* (María Haber); sorting finds in lab.

Day 14

Morning: excavation at Sima de las Palomas.

Afternoon: workshop on *Flint Knapping* (Mariano López); sorting finds in lab.

Day 15

Excursion to see archaeological sites and museums at Cartagena (no morning excavation, no afternoon lab).

Day 16

Morning: excavation at Sima de las Palomas.

Afternoon: seminar on *What Ever Happened to the Neanderthals?* (Michael Walker); sorting finds in lab.

Day 17

Morning: excavation at Sima de las Palomas.

Afternoon: showing of documentary “*Decoding Neanderthals*”; sorting finds in lab.

Day 18

Free time all day (no morning excavation, no afternoon lab)

Day 19

Morning: excavation at Sima de las Palomas; Press Conference with mayor of Torre Pacheco.

Afternoon: sorting finds in lab; Open Round Table of staff and helpers to evaluate Session 2.

Day 20 (Sunday)

Morning: *Open Day* at Sima de las Palomas (free time for those helpers not required on site).

Afternoon: free time (no afternoon lab).

Day 21

Morning: close up excavation and field lab; take down and pack up equipment and finds.

Afternoon: take equipment and finds to Murcia.

Day 22 (Tuesday)

Morning: helpers who are leaving are taken to the airport; equipment and finds are taken to Murcia.

YOUR ASSIGNMENTS

All our helpers are integrated into the project alongside staff assistants. Most senior site helpers are young university graduates or senior undergraduate students who have field experience at Palaeolithic sites, and most of them will be present for most of the six-week field season at our two sites. Their task includes assisting helpers who come for shorter periods or who have little or no prior experience in palaeolithic excavation.

The physical work of excavation is carried out in the morning. Morning assignments involve excavation, removing excavated material, and sieving it, as well as service tasks at the sites. Some heavy tasks, such as carrying bags of soil, are hard for some older participants, who may choose to carry out lighter tasks such as sieving or service tasks such as starting or stopping the water-pump.

Work assignments are usually given to task groups of between two and six members. These groups contain both senior site helpers and other helpers. Members of task groups are rotated during the morning, or from one morning to the next, so all members get a chance to participate in all aspects of the project if they wish.

Knowledge of basic Spanish is always helpful. Only a few of my senior site helpers speak English fluently, although helpers who come from overseas find all of them welcoming, friendly, helpful and patient. I do try to encourage those helpers who have no Spanish at all to help groups alongside those senior site helpers who can speak some English, wherever this is possible.

Don't feel bashful about trying out a few words of phrase-book Spanish! Much as I should like to be, I cannot be always on hand to answer every question that may occur to a helper, because some of my time is taken up giving instructions in Spanish to my senior site helpers or discussing scientific and technical issues with them or logistical matters that have your well-being as our aim. So please do make every effort, despite any language barrier, to address questions to senior site helpers or ask them for assistance, rather than bottling up your queries or worries to deluge the Principal Investigator (-me!-) with them because his explanations can hold up the Project from moving forwards just so as to help one person to look backwards - they can put a brake on the work not just of the one anxious volunteer but of perhaps a dozen other people. So please do try to get to know the staff as well as just the Principal Investigator. Your efforts here will be greatly appreciated and should lead to a responsive social ambience both during working hours and leisure time.

Afternoon assignments involve washing materials found during the morning, arranging them for drying, and preliminary classification of materials which are dry (usually those found the day before). Helpers take part in these activities alongside staff assistants, who help them to recognize the principal categories of material finds, and how to help with their initial sorting and identification, in ways which greatly simplify later laboratory analysis of them.

Tasks do not change much over the duration of our field campaign, although the precise details of the ways in which the tasks are performed differ somewhat between the two sites because of their different topography.

Skills and talents which are useful to the project range from acquaintance with such intellectual disciplines as archaeology, physical anthropology, anatomy, geology, soil science or palaeontology, to such practical activities as draughtsmanship, photography, surveying, working with ropes, and familiarity with petrol-driven water-pumps, portable electricity generators, power drills or jack-hammers. We've incorporated some useful technical tips from helpers with engineering skills to others who go in for home mechanics or have built their own home...

STAFF

Our staff are members of the Murcian Association for the Study of Palaeoanthropology and the Quaternary (MUPANTQUAT) and the Murcia University Research Group "Quaternary Palaeoecology, Palaeoanthropology and Technology"; many are coauthors of our recently published articles in major scientific journals about *Cueva Negra* and *Sima de las Palomas*.

Michael J. Walker, DPhil. Field School Director. Director of excavations at Cueva Negra and Sima de las Palomas. I began field research at the sites in 1990 and I am Principal Investigator and direct the Project overall. I aim to be present with you all during working and instruction hours, often from eight o'clock in the morning to about eight o'clock in the evening, at least. I am a physical anthropologist, palaeoanthropologist and prehistoric archaeologist. I trained in Medicine, Physiology and Prehistoric Archaeology at Oxford University. After being Research Fellow in Archaeology at Oxford's The Queens' College, I lectured at Edinburgh and Sydney Universities before appointment in 1988 as foundation professor of Physical Anthropology at Murcia University which in 2011 named me Emeritus Professor. I chair of the Murcian Association for the Study of Palaeoanthropology and the Quaternary, MUPANTQUAT. In Murcia I have excavated sites of the initial Iron Age, Copper Age, and Mesolithic-Neolithic transition, and conducted fieldwork on Quaternary landscapes. For more details go to the the end of **BRIEFING YOU** where you will find **YOUR FIELD SCHOOL DIRECTOR, AS SEEN BY HIMSELF Michael Walker and his curriculum vitae**.

Mariano V. López-Martínez. Co-director of excavations at *Cueva Negra* since 2002 and at *Sima de las Palomas* since 2008. Murcia University graduate in History and Geography with specialization in Prehistory, Archaeology and Ancient History, and took the 1-year postgraduate course in Palaeoanthropology in 1994 when he first helped at the *Cueva Negra* and *Sima de las Palomas* excavations. In 2001 he played a major part in preparing the European Commission-sponsored travelling exhibition about our two sites that opened at Vienna's Natural History Museum before being displayed at the Oxford University Natural History Museum and several museums in Spain. He is very much a "hands-on" archaeologist with wide practical experience of field and contract archaeology, directing rescue excavations, and displaying the results. In addition to our Palaeolithic excavations he has conducted work at Mediaeval, Roman and other sites, including excavation of the important Camino del Molino Copper-Age burial chamber at Caravaca, Murcia; see Lomba, J., López-Martínez, M., Ramos F. & Avilés, A., 2009, *Trabajos de Prehistoria* 66 (2) pp. 143-159, ISSN: 0082-5638, eISSN: 1988-3218). At our Field School he mainly is in day-to-day charge of excavation, on-site recording, and the inventory and registry of excavated finds. For his coauthorship of publications about *Cueva Negra* and *Sima de las Palomas* go

to *SOME RECENT PUBLICATIONS ABOUT WORK AT OUR SITES THAT MAY WELL INTEREST YOU* at the beginning of **BRIEFING YOU**.

María Haber-Uriarte, PhD. Co-director of excavations at *Cueva Negra* and *Sima de las Palomas* since 2010. She is an assistant lecturer at Murcia University's Department of Prehistory and Archaeology. She took her degree in archaeology at Salamanca University (1993) and subsequently studied physical anthropology at Granada University where her doctoral thesis (2003) was on Neanderthals in the Iberian Peninsula. She has wide field experience in contract and rescue archaeology, including excavation and physical anthropological analysis of the important Camino del Molino Copper-Age burial chamber at Caravaca, Murcia (see Avilés, A., Haber, M. & Lomba, J., 2012, pp. 106-108 in *Biodiversidad Humana y Evolución*, edited by Turbón, Fañanás, Rissech & Rosa, University of Barcelona, ISBN: 9788469563229, 9788469563236). For her coauthorship of publications about *Cueva Negra* and *Sima de las Palomas* go to *SOME RECENT PUBLICATIONS ABOUT WORK AT OUR SITES THAT MAY WELL INTEREST YOU* at the beginning of **BRIEFING YOU**.

Ignacio Martín-Lerma, PhD. He is an assistant lecturer at Murcia University's Department of Prehistory and Archaeology. Trained in archaeology at Murcia University, Madrid's National University for Distance Studies (where he is a member of its Palaeolithic Studies Laboratory), and Madrid's Autonomous University, his doctoral thesis was on experimental and microscopic use-wear analysis of stone artifacts. He has participated in the *Cueva Negra* and *Sima de las Palomas* research and is conducting use-wear analysis of their Palaeolithic stone tools. He has participated in major Palaeolithic excavation projects at Cueva Antón in Murcia (Mousterian), Rambla Perea in Murcia (Middle-to-Upper Palaeolithic), Cueva Ambrosio in Almería (Solutrean), La Peña de Estebanvela in Segovia (Magdalenian), Cerro del Buho in Murcia (Copper Age) and Camino del Molino in Murcia (Copper Age), and has also directed excavations. He is author or coauthor of articles in *Trabajos de Prehistoria*, *Quaternary International*, etc., papers presented at national or international scientific meetings, talks, seminars and courses given at various universities, and 3 archaeological documentary films ("*Un encuentro con el pasado*", 2008; "*Experimentar para comprender: Tecnología del Paleolítico*", 2010; "*La vida a través de la muerte: Los enterramientos en la Prehistoria Reciente*", 2013).

Antonio López-Jiménez. Murcia University Biology graduate. He is finishing a PhD thesis on faunal analysis and micromammalian Pleistocene biostratigraphy, biochronology and palaeobiology at *Cueva Negra*. For the past ten years at our Field School he has coordinated preliminary preparation, cleaning and registry of faunal remains at *Cueva Negra* and *Sima de las Palomas*. For his coauthorship of publications about *Cueva Negra* and *Sima de las Palomas* go to *SOME RECENT PUBLICATIONS ABOUT WORK AT OUR SITES THAT MAY WELL INTEREST YOU* at the beginning of **BRIEFING YOU**.

Jon Ortega-Rodrigáñez. Madrid Autonomous University Biology graduate. He is finishing a PhD thesis at Murcia University on the *Sima de las Palomas* Neanderthal postcranial skeletal remains. He has taken part in the *Cueva Negra* and *Sima de las Palomas* excavations for the past ten years and assists our helpers both on site and in the lab. For his coauthorship of publications about *Cueva Negra* and *Sima de las Palomas* go to *SOME RECENT PUBLICATIONS ABOUT WORK AT OUR SITES THAT MAY WELL INTEREST YOU* at the beginning of **BRIEFING YOU**.

Azucena Avilés-Fernández. Murcia University Biology graduate with further study of physical anthropology at Granada University, who assists with skeletal analysis of human and faunal remains. She has taken part in the *Cueva Negra* and *Sima de las Palomas* excavations for the past ten years and assists our helpers both on site and in the lab. She has undertaken excavation and physical anthropological analysis at the important Camino del Molino Copper-Age burial chamber at Caravaca, Murcia; see Lomba, J., López-Martínez, M., Ramos, F., Avilés, A., 2009, *Trabajos de Prehistoria* 66 (2) pp. 143-159, ISSN: 0082-5638, eISSN: 1988-3218; Avilés, A., Haber, M., Lomba, J., 2012, pp. 106-108 in *Biodiversidad Humana y Evolución*, edited by Turbón, Fañanás, Rissech & Rosa, University of Barcelona, ISBN: 9788469563229, 9788469563236). For her coauthorship of publications about *Cueva Negra* and *Sima de las Palomas* go to *SOME RECENT PUBLICATIONS ABOUT WORK AT OUR SITES THAT MAY WELL INTEREST YOU* at the beginning of **BRIEFING YOU**.

Ángel Tomás Buitrago-López. Murcia University Biology graduate who assists with skeletal analysis of human and faunal remains. He has taken part in the *Cueva Negra* and *Sima de las Palomas* excavations for the past three years and assists our helpers both on site and in the lab.

Our senior site helpers are young university graduates or senior undergraduate students who collaborate with me - some of them have already been named above, and there are other regular staffers who have worked with us for several years. There is roughly one senior site helper for each helper with little experience, so you are never left alone wondering just what you ought to be doing, because there is always someone alongside to help and show just what has to be done and how to do it.

At the Caravaca Ascruz public residential school we are very well looked after by our cooks Marcruz and Mariluz, who are sisters, and its caretakers and cleaners. At Dolores de Pacheco we are also very well looked after by the caretaker and cleaners of the public school where we stay and sleep, and by the cooks Mariángeles and her husband Ginés at the Centro Cívico nearby where we take our meals.

At *Sima de las Palomas*, until his death in September 2007 I had as my co-director of excavations a geologist and palaeontologist, the late Dr Josep Gibert, who was both my good friend and a distinguished public-service research-scientist at the Instituto Paleontológico "Dr M.Crusafont" de la Diputación de Barcelona at Sabadell, a satellite city of Barcelona.

Several staff associates come to give talks, as well as scientific collaboration, in our Day-by-Day Field School Programme and Team Development Activities. Among them are our communications expert **Jesús García-Torres** who teaches at the Murcia Catholic "San Antonio" University who has had wide professional experience in the media, Murcia University Professor of Plant Evolution palaeopalynologist **Dr José Carrión-García** and his team (which includes **Dr Santiago Fernández-Jiménez** and **Dr Manuel Muñoz**), **Dr Tomás Rodríguez-Estrella** who is Professor of Hydrogeology at the Cartagena Polytechnic University, palaeontologist **Dr Gregorio Romero Sánchez** of the Murcian Regional Government's Heritage Directorate-General, Murcia University analytical chemist **Dr Juan Luis Polo-Camacho**, and the archaeologist **Armando de Lucena** who works at local prehistoric rock-art sites and the Murcian Regional Centre for Rock-Art Interpretation at nearby Moratalla.

We have very many specialists in different disciplines at centres around the world who collaborate with us actively, and possibly one or two may visit our sites during our summer field season and if so they usually share their knowledge and experience with us in talks, seminars or field expertise on site. Some are old hands at our Field School and excavations, or long-standing scientific collaborators. Among them are archaeologist **Ian Herbertson** (currently undertaking a PhD at Reading University in England), Pittsburgh dental anthropologist **Dr Vince Lombardi** ((one-time adjunct professor at Harvard University Dental School), British archaeologist and engineer **John Simpson**, O.B.E., bioarchaeologist **Sara Rhodes** (currently undertaking a PhD at Toronto University), geoarchaeologist **Dr Diego Angelucci** and his PhD student **Daniela Anesin** who sample sediment at our sites for micromorphological research at Trento University in Italy, Oxford University OSL Dating Laboratory head **Dr Jean-Luc Schwenninger**, physical anthropologist **Dr Marco Milella** from Zurich University Anthropology Institute, and the distinguished mammalian palaeontologist **Dr Jan van der Made** (Museo de Ciencias Naturales del Consejo Superior de Investigaciones Científicas, Madrid).

Among eminent scientific collaborators are the distinguished paleoanthropologists Professor Erik Trinkaus (Washington University of St. Louis), who is the leading authority on Neanderthal anatomy, and Professor Bernard Wood of the George Washington University of Washington DC whose publications on early *Homo* in Africa are world-famous. Another distinguished scientist is the palaeogeneticist **Dr Svante Pääbö**, (Director of the world-famous Max Planck Institute for Evolutionary Anthropology at Leipzig), who has sent members of his team to take samples during our *Sima de las Palomas* excavations. Likewise **Dr Michael Richards** (now Professor of Anthropology at the University of British Columbia, who until recently held senior appointments at Durham University and the Leipzig institute), an expert on research into stable isotopes that provide useful knowledge about Palaeolithic diets, visited us two years ago with his then PhD student, now **Dr Domingo Carlos García-Salazar** (Valencia University). Domingo Carlos is undertaking research at the Leipzig institute that is being directed by **Dr Amanda Henry** whose research team is studying phytoliths in Neanderthal dental calculi, as well as other biological residues, which tell us about plants eaten at *Sima de las Palomas*. Other members of her team. **Dr Robert C. Power** and **Dr Cynthianne Spiteri**, have taken samples our sites in 2012 and 2013 for **Dr Henry's** collaborative research project with us, and **Dr Henry** herself visited Murcia in 2011.

The eminent palaeoanthropologist Professor Chris Stringer (Natural History Museum London and London University Imperial College) follows our research keenly and he sent his Head of Conservation, Chris Collins, here to give us the benefit of his experience. Subsequently, we have had more advice in this regard from Professor Christoph Zollikofer and **Dr Marcia Ponce de León** from Zurich University and **Dr Francisco Giles-Pacheco** and **Juan José López-Amador** from the El Puerto de Santa María Museum. Professor Zollikofer and **Dr Ponce de León** have taken part at Murcia in tomographic CAT-scanning of the *Sima de las Palomas* Neanderthal skeletal remains with us and have received us at Zurich to continue the research.

Other notable colleagues include thermoluminescence expert **Dr Daniel Richter** (the Leipzig Max-Planck Institute and Cologne University) and the expert on optically stimulated luminescence sediment dating **Dr. Jean-Luc Schwenninger** (Oxford University Research Laboratory for Archaeology and the History of Art, RLAHA), as well as the well-known radiocarbon dating specialist at RLAHA, Professor **Tom Higham**, uranium-series dating expert **Dr Alistair Pike** (formerly Bristol University, now Southampton University), **Dr Jean-Luc Schwenninger** (Optical Sediment Luminescence Laboratory at RLAHA), palaeomagnetism specialists Professor **Gary Scott** (Berkeley Geochronology Center) and **Dr Lluís Gibert-Beotas** (Barcelona University), cosmogenic nuclide dating expert **Dr Régis Braucher** (Laboratoire de Nucléides Cosmogéniques LN2C, CEREGE UMR 6635, CNRS, Aix-en-Provence), the specialist in Fourier-transform infra-red spectroscopic analysis of burnt remains **Dr Francesco Berna** (Simon Fraser University), the specialist in electron spin resonance analysis of burnt remains **Dr Anne Skinner** of Williams College Boston, and the expert in spectroscopic characterization of rare-earth and crustal elements **Dr Alex Andronikov** of Arizona University's Planetary and Lunar Laboratory.

Other relevant colleagues and collaborators include physical anthropologists **Dr Alejandro Martínez-Pérez-Pérez** (Barcelona University), **Dr Kornelius Kupczik** (Max Planck Institute for Evolutionary Anthropology at Leipzig) and **Dr Josefina Zapata-Crespo** (Murcia University), Palaeolithic archaeologists Emeritus Professor **Derek Roe** (Oxford University), Professor **João Zilhão** (Barcelona University), Emeritus Professor **Nicolas Rolland** (University of Victoria, Canada), Professor **Wil Roebroeks** (Leiden University) and Professor **Tom Wynn** (University of Colorado at Colorado Springs), anthracologist **Dr Ernestina Badal** (Valencia University), micromammalian palaeontologist Professor **Antonio Ruiz-Bustos** (Granada University), mammalian palaeontologists **Dr Carles Ferrández** (Barcelona University), reptile palaeontologist **Dr Xaber Murélag**a (University of the Basque Country), geomorphologist **Dr. Yanni Gunnell** (Lyons-2 University), archaeologist Professor **Milton Núñez-Gilbert** (Oulu University, Finland), archaeologist and physical anthropologist **Dr Phillip Habgood** (Queensland University), avian palaeontologist **Anne Eastham** (Cledau Laboratory for Archaeozoology, Fishguard, Wales), archaeologist **Miguel San Nicolás-del Toro** (Instituto de Patrimonio Histórico, Comunidad Autónoma de Murcia), palaeoimmunology, and palaeobiochemistry expert Professor **Enrique García-Olivares** (Granada University).

FIELD LOGISTICS

RESEARCH AREA

Both *Cueva Negra* and *Sima de las Palomas* lie in the southeastern Spanish province of *Murcia*. It is a popular Summer tourist area, especially the *Mar Menor* ("Lesser Sea") which is a large coastal lagoon near to *Sima de las Palomas*. *Murcia* is extremely dry and its coastal region becomes is very warm from mid-June to mid-September: by noon the temperature is usually 30-40° C (85-105° F.).

The region has a *Mediterranean* scrub vegetation and its aridity means that for the most part its hills and mountains are not covered by dense woodland but, instead, show rocky slopes and cliffs. The majestic hills and peaks emit the heady scented fragrance of thyme, juniper, laurel, fennel, marjoram, camomile and rosemary.

Little is left of the original wildlife, apart from occasional eagles, vultures, and, in the hinterland near *Cueva Negra* wild boar, and occasional wild deer and cats. For the most part, only occasional herds of sheep or goats move across the landscape. All the same, a few less pleasant animals lurk among the rocks, from stinging tarantula spiders and small scorpions to poisonous vipers. If you wear boots when you are not on footpaths, these little creatures will scurry away quickly, so don't worry!

Dramatic visual contrasts in the landscape are provided between the bright rock of steep hillsides and the lush green agricultural crops on valley floors which are oases maintained by irrigation canals from the *River Segura* and its tributaries.

These canals were first dug by *Syrian* engineers after this part of Spain fell under *Muslim* domination in the eighth century A.D., when *Islamic* soldiers crossed the *Gibraltar Strait* from *North Africa* and soon conquered most of Spain. The very name *Murcia* is an old Arabic word, "*mursiyah*", which means "*Place of Waters*". It is the name both of the self-governing political region and of its administrative capital which is a city of 400,000 people. It was the capital of an important Muslim emirate or kingdom. (Geographical coordinates for Murcia city are: Latitude 37° 58' 35.5296" or 37.97653574833937; Longitude -1° 5' 35.304" or -1.0931396484375.)

Murcia was an important Muslim kingdom until it was reconquered by Christian Spaniards in the thirteenth century. The reconquest is celebrated every year at *Caravaca de la Cruz* by a mock battle between Christian knights and Moorish soldiers. *Caravaca* was the summer capital of the Muslim kings, who retreated there from *Murcia* which is stiflingly hot and humid in the summer. Helpers at *Cueva Negra* can visit their palace and castle at *Caravaca* now also contains a beautiful church which was built to commemorate a vision there of a Holy Cross with two cross-bars (like the Cross of Lorraine in France) that supposedly helped convert the people to Christianity. *Caravaca* is at 500 metres above sea level, and is cooler than is *Murcia* at a mere 50 m above sea level. *Cueva Negra* is just under 15 kilometres from *Caravaca*, and is higher still, at 750 metres above sea level. On the hill above the cave there are the walls and house-foundations of a late prehistoric Iberian (Iron Age) town and of an Iberian and early Roman temple over part of which a small church was later built. Helpers at *Cueva Negra* can visit these. Not far away, at *Mula*, there was an important Iberian town and there is an excellent museum of Iberian finds.

Murcia was long famous for its *silk* industry, based on its rich orchards of mulberry trees, although that industry has died out over the past 100 years, to be replaced by fruit orchards and canneries. Murcian *peaches* are the sweetest in Europe. Murcian tomatoes, lemons, oranges, melons, and fruit and vegetables of all kinds, from avocado pears and quinces, to date palms, asparagus, artichokes, lettuces, grapes, almonds and olives, are trucked up the 900 kilometre-long motorway which links Murcia to France, Germany, Scandinavia and Russia. Many reach northern markets long before fruit in other *European Union* countries has even started to ripen. The first tomato crop is picked in Murcia at New Year, thanks to a very warm climate which is really an extension of that of *North Africa*.

After dividing at the city of *Murcia* one branch of the motorway goes to Andalusia and the other heads south to link *Murcia* both with its airport at *San Javier* 45 kilometres away and also its sea-port of *Cartagena*, which is a corruption of the name given to it by the *Romans* of "*Cartago Nova*" meaning "*New Carthage*". This reminds us that the port was founded by *Carthaginians* from *North Africa* more than two hundred years before Christ, and formed part of the *Hannibal's Punic Empire* before it came under the Roman heel. Long before Rome was important in the world, *Cartagena's* enclosed natural harbour and its surrounding mountains rich in silver, lead and iron ores, were coveted by the *Carthaginians* who competed with Greece for control of Mediterranean sea-routes, because whereas the Greeks had silver mines for coinage near Athens itself, Tyre and Carthage had none. The Greeks established ports in Catalonia (*Ampurias*) and France (*Marseilles*), whereas Carthage maintained control of *Cartagena* until the Roman general Scipio besieged it and thereby also took control of its valuable silver mines.

To-day, *Cartagena* is the main port for the *Spanish Navy* and is an attractive city of 200,000 people with many remains of the *Carthaginian* and *Roman* periods which can be visited. They include part of the *Carthaginian* city wall built in 300 years before Christ, the *Roman* theatre, *Roman* house foundations and streets preserved as museums in the basements of modern buildings, part of the *Byzantine* city wall of 500 A.D., and much more besides. There is a breathtakingly splendid archaeological museum, a very attractive museum of maritime archaeology. It also has the world's first electrically-driven submarine, made in 1888 by Spanish naval engineer and inventor *Isaac Peral*, which weighs 80 tonnes, has 3 propellers and reached a speed of 7.7 knots. The city and its naval base were heavily fortified in the 18th century under King Carlos III, and his walls and forts dominate the hills and cliffs which enclose the superb natural harbour.

In the hills near *Cartagena* is another cave which was entered by miners, *Cueva Victoria*, where my friend, the late José Gibert excavated fossils in what was an Early Pleistocene hyaena den into which the carnivores brought one or two hominin bones, which are among the oldest in Europe (see "CV-0, an early Pleistocene human phalanx from Cueva Victoria (Cartagena, Spain)". J. Gibert, L. Gibert, F. Ribot, C. Ferrández-Cañadell, F. Sánchez, A. Iglesias, M.J. Walker, in *Journal of Human Evolution*, 2008), even older than those from *Atapuerca Cave* in northern Spain which only go back as far as the end of the Early Pleistocene 780,000 years ago. Helpers at *Sima de las Palomas* may have opportunities to visit *Cartagena* and perhaps *Cueva Victoria*, or they may prefer to visit the city of *Murcia* instead. Dr. Gibert also excavated Lower Pleistocene hominin and early Palaeolithic sites at *Orce* in northern Granada.

Sima de las Palomas is roughly 45 kilometres from both *Cartagena* and *Murcia*. *Murcia* has a magnificent *cathedral* with a splendid baroque west front and an enormous tower which offers a fine view of the city. 1994 was the 600th anniversary of the founding of the cathedral. The centres of both *Murcia* and *Cartagena* are narrow pedestrian thoroughfares which are always thronged with people. During *Easter Week* both cities have enormous religious processions which are often televised throughout Spain.

Both cities have a very wide range of bars and taverns, where the strong dry Murcian *red wine* from the *Jumilla* vineyards and wineries should be drunk straight from the cask, accompanied by the wide variety of *tapas* or snacks for which Murcian bars are rightly famous. However, every Murcian town is rich in bars, taverns and discotheques, which come alive at night after dinner, which during the Summer means after about eleven o'clock at night. They are still going strong and noisily at five o'clock in the morning. Helpers at *Caravaca* can sample a wide range of them there, and those at *Dolores de Pacheco* can do so at the seaside resorts of *Santiago de la Ribera* and *Los Alcazares*.

Lack of time, alas, means it may not always be possible for helpers to visit *Murcia* city itself. Should you wish to spend some time in the cities of *Murcia* and *Cartagena*, you could do what some other volunteers have done in the past, and come a few days early or stay on for a few days afterwards. Some of you may wish to visit the marvellous *Alhambra* palace at *Granada*, which can be reached by coach from *Murcia* though you will probably need to spend two nights at *Granada* in order to have a full day free to see everything. If you want to do any of these, do please let me know, so that I can offer you useful advice.

Murcians, like other Spaniards, are extraordinarily outgoing, effusive and noisy, especially in Summer. They are fundamentally egalitarian and democratic in outlook, and although most are Roman Catholic, they wear their Catholicism lightly and see its processions, baptisms, first communions and weddings as occasions for exuberant enjoyment and festivity, rather than solemnity. Even during solemn religious processions each penitent give out hundreds of sweets to eager children.

Both the Spanish parliament, the Murcian regional parliament, and the city halls of *Murcia* and *Cartagena*, are all controlled by the conservative *Popular Party*. The party has an absolute majority in the national parliament since its leader Mariano Rajoy won the general election in November 2011. He inherited an economic disaster from the socialist government that he ousted and the Spanish economy went into recession. Spain belongs to the eurozone but it has inherited massive debts and the government had had to pay high interest to its bond-holders because the European Central Bank is loth to buy government bonds of European Union eurozone countries (the German government will not let it do so). Happily, at the end of 2013 Spain has begun to emerge from economic recession, but because there is still and a frighteningly high rate of unemployment the outlook is far from rosy.

PASSPORTS, VISAS AND RECONFIRMING YOUR TICKETS

CHECK THAT YOUR PASSPORT HAS NOT EXPIRED! IF IT HAS, GET IT RENEWED! People who are not citizens of a European Union Member State usually need *valid passports*, and may need *visa stamps* in them for visiting Spain and other European Union countries unless their country has reciprocal agreements for visitors to and from the European Union - thus I understand that visas are *NOT* required for US or Canadian visitors because such agreements exist, although citizens of many British Commonwealth nations do still need visas for entering Spain and all other EU countries. If in any doubt, travel agents or the nearest Spanish Consulate-General will advise whether or not a visa is required. Visas are issued at Spanish Consulate-General offices and there is always one attached to the Spanish Embassy in national capitals, and many large cities have one also (listed in the phone book).

United Kingdom and Irish citizens, even though they do not need visa stamps, should still carry their passport with them because these two Member States of the EU neither automatically assign each citizen with an ID card nor have they joined the "Schengen Group" of those EU nations which have abolished border control of travellers between the countries of this group. I believe that EU citizens from "Schengen Group" states need only carry their national ID card to enter Spain which belongs to the "Schengen Group".

Reconfirmation of your return flight is *not usually necessary* nowadays (*whatever* your travel agent tells you to the contrary), because international return flights on major airlines - and even charter flights - *are almost always reconfirmed automatically by the airline, without you having to contact them again at all*. Many tickets carry the rather confusing advice that reconfirmation should be 72 hours before departure, though you may well be able, in fact, to reconfirm a month before departure (especially on intercontinental flights) and so feel secure that you have got a seat reserved for you. You can often *even* reconfirm your return flight before you set out on your travels at all, at the desk of the airline in the airport from which you leave home; I myself often do this nowadays.

Some travellers still like to make sure later on. So if you are one of them *IT IS YOUR RESPONSIBILITY AND YOURS ALONE* to reconfirm your ticketing -- not mine nor that of my staff. You can do it *MOST EASILY* like this. If you arrive in Madrid by plane from outside Europe you can reconfirm your international return flight at *ANY* airline desk (including that of Iberia Airlines) in *Madrid-Barajas International Airport BEFORE* you leave the international section of the airport -- regardless of whether you are going to spend a few days in the city or are simply going straight to the national section of the airport to catch a connecting national *Iberia Airlines* flights down to *Murcia Airport*. The airport at present is at San Javier (*Murcia-San Javier Airport*), about 5 kilometres from Cabezo Gordo and our campaign base at the village of Dolores de Pacheco. However, a new Murcia Airport has been built at Corvera which is about 25 kilometres from Dolores de Pacheco, but it is still not yet open to air traffic, though if it manages to open in 2014, replacing the present San Javier airport, you will be met by us there of course.

The reason *WHY* you should do that *straight away* in *MADRID* is that once you get to *Murci-San Javier Airport* you will find that it is possible to reconfirm *ONLY Iberia Airlines* international outward flights from Madrid or Barcelona, *BUT NOT THOSE OF OTHER INTERNATIONAL CARRIERS* because the *Iberia Airlines* desk at *Murcia-San Javier* is *NOT* connected by computer-link to any company except *Iberia Airlines*. You can, however, reconfirm local return flights (*i.e.* flights within Spain) out of *Murcia-San Javier Airport* at the *Iberia Airlines* desk; so if you are addicted to reconfirming your flights you should reconfirm your return flight back to Madrid on *Iberia Airlines* on your arrival at *Murcia-San Javier* also. If you are coming from *London* by *British Airways*, *Ryanair*, *Easyjet* or other companies, then see to it that *YOU* find the receptionist of the flight in question on your arrival in order to reconfirm your return flight with him or her, if you are addicted to reconfirming return flights. *British Airways* has joined up in a single company with *Iberia*; this may affect flight designations in 2014: you should find out.

Again, all this is *YOUR* responsibility, not mine nor that of my senior site helpers. People are often forgetting to do this on arrival, and then continually pestering us to organize telephone calls for them from *Caravaca* or *Dolores de Pacheco* to international carriers in Madrid. I and my senior site helpers are busy enough, as it is, running a research project; we are *NOT* tour-operators nor a travel agency for wayward or forgetful new helpers, let alone for those who are merely neurotic obsessives.

IMPORTANT MONEY MATTERS

The Spanish currency is the euro €, which is divided into one hundred cents of a euro. At the time of writing, November 2013, one euro, 1€, is roughly equal to \$1.35 US or £0.85 UK. Looked at the other way round, roughly speaking \$1 US buys 0.75€ and £1 UK buys 1.20€. However, currency rates can fluctuate at times of international economic crisis. I recommend most definitely that you bring some banknotes in euros with you - **say €100 euros at least**.

In Spain you can both get cash or pay for things with *VISA* or *MASTERCARD* credit cards. Please note, however, that *AMEX* cards and *DINERS CLUB* cards are often refused (because most retailers or hoteliers won't accept the stiff terms imposed by those two credit-card companies), and, furthermore, my experience of volunteers' difficulties has shown me that bank cash cards (e.g. *ATT*) from your home banks (especially from US banks) *tend not to work in Spain* when you try to use them in automatic ATM cash machines here (whatever you may have been told to the contrary back home!) so don't rely on your bank cash card. Therefore you should also bring a *VISA* or *MASTERCARD*, and most particularly you must make sure that it has been **configured by your home bank for European Union countries**, and most especially for **Spain**. Don't be slack about insisting on this because I've even had trouble getting my Spanish-

issued VISA card to work in France and my son had trouble with his in the UK! (Yeah, I know you've got to pay interest charges with VISA and MASTERCARD. That's how the cookie crumbles!).

Over the past four or five years we have found that local banks in the towns where we have our bases **are refusing to cash traveller's cheques**. This is because they now have to enforce a very restrictive interpretation imposed on them by Spain's government of European Union regulations intended to prevent money-laundering. The Spanish authorities will now only allow banks in Spain to credit pre-existing customers' bank accounts with money paid in to them from non-account-holders' traveller checks -such as the US-dollar traveller checks of our helpers from other countries; the bank account holders here (us) would then have to pay those helpers back in euros from their (our) personal bank accounts, but the money paid into our accounts in that way is treated by Spanish tax authorities as part of our personal income on which we, the account holders, have to pay income tax to the Spanish government, **so we now refuse to do that for you!** **THE BOTTOM LINE IS THAT YOU MUST NOT BRING TRAVELLER'S CHEQUES HERE.** So what to do? The only alternative is to bring as many euro banknotes with you as you think you will need here in the possible event of having problems when using your VISA or MASTERCARD in ATM machines. One way that seems to work quite safely is to get a cloth money-belt you can wear under your clothes and bring with you euro banknotes in denominations of 50 or 100 euros.

RENDEZ-VOUS

For field helpers arriving by plane for both *Sima de las Palomas* and *Cueva Negra*, the rendez-vous is *Murcia-San Javier Airport* at *San Javier (MJV)*.

Rendez-vous is on **Tuesdays with set-downs and pick-ups mainly between 15.00 hours (3 p.m.) and 21.30 (9.30 p.m.)** on these dates (precise hours will be adjusted to take account of afternoon-evening flight arrivals and departures when the 2012 Summer schedules are published):

Cueva Negra: pick up Tuesday **July 1st**, set down Tuesday **July 22nd 2014**

Sima de las Palomas: pick up Tuesday **July 22nd**, set down Tuesday **August 12th, 2014**

Murcia-San Javier (MJV) Airport is a small airport and because it forms part of a complex with the Spanish Air Force Academy for training officer pilots its air space is closed to civil traffic between 8 a.m. and 3 p.m.. This means that international flights in and out take place in the late afternoon or evening, and it also means they land or leave at broadly similar times, give or take an hour, regardless of whether the Winter or the Summer schedule is in force. Internal civil flights between the airport and Madrid by *Iberia Airlines* (the Spanish national carrier) are mainly in the afternoon or evening though there is one early morning flight to Madrid: none of these internal national flights run on Saturdays or Sundays, however, because they are aimed at internal businessmen's weekday needs to do the return trip in one day, and not those of international visitors on weekends. Intercontinental travellers from the USA or elsewhere are advised to book an onward *Iberia Airlines* afternoon or evening flight from Madrid Barajas Airport to MJV, and an afternoon or evening one back to Madrid. Just to complicate things a bit more, a new Murcia Airport has been built but is not yet functioning. If it starts operating in July, and the old airport has been closed, then you will be met at the new one, so don't worry.

Because of the aspects outlined above, we find it most convenient to only pick up and set down travellers at MJV Airport at 3-weekly intervals in the afternoon and evening of only **one** particular weekday, which in 2014 is **Tuesday**. If you arrive earlier on the Tuesday, you will have to be prepared to wait several hours for us to appear. If you want to leave earlier in the day, you will have to be prepared to hire a taxi (at your own expense) to get you to MJV Airport - and you will also have to be prepared to do this if you choose to arrive or depart on any **other** dates than **July 1st, July 22nd and August 12th, 2014**.

Beware of British Midland flights advertized as going to "Murcia", when in fact they fly in and out of *Alicante International Airport* and we do **NOT** pick up or set down travellers at *Alicante International Airport* **under any circumstances**, because its heavy volume of air traffic leads to long delays in many flights, especially non-scheduled cheap charter flights from the UK or other EU states, and I am simply not prepared to have my drivers hanging around the airport for hours waiting for late planes to land, let alone to have to keep our cooks up all night keeping dinner warm for my drivers and late arrivals they bring back with them.

On *Tuesdays* there are flights between London and Murcia-San Javier Airport (flying time is two-and-a-half-hours; there is a 1-hour time-zone difference between Spain and the UK). **PLEASE NOTE** THAT THESE FLIGHTS MAY NOT RUN EVERY DAY OF THE WEEK. Please consult your travel agent, or the time-table of the airline on the web, about possible up-dates for July and August 2014.

The direct flights between London and Murcia-San Javier (MJV) Airport by either **Ryanair** from London (Stansted) and London (Luton) or **Easyjet** from London (Gatwick) are suitable for our rendez-vous arrangements because they will mean you don't have to hang around for twelve hours (or even find somewhere to stay overnight!) while waiting for us to pick you up. **Easyjet** flies also flies between Bristol and Murcia-San Javier and between Newcastle and Murcia San-Javier. There are even flights from Edinburgh by **Jet2**. You will find the details on the web. Please check the web because some carriers may be eliminating some services in 2014, we have been told.

Remember that each 3-week period will begin on Day 1 (arrival day, Tuesday) with rendez-vous at Murcia-San Javier National Airport (we start and finish on Tuesdays because there are not only connecting *Iberia (Air Nostrum)* flights from Madrid and Barcelona on weekdays for intercontinental travellers arriving in Spain from the USA, Australia or elsewhere (there are no connecting *Iberia (Air Nostrum)* flights on Saturdays and Sundays), but also numerous low budget flights from the UK and some other EU countries. The following low budget airlines fly in to Murcia-San Javier, or have flown recently (the economic crisis has led to a reduction in flights and companies flying to Murcia-San Javier): *Bmibaby* (from Birmingham), *Easy-Jet* (from London-Gatwick and Bristol), *Flybe* (from Birmingham, Exeter, Southampton, and Norwich), *Flyglobespan* (from Edinburgh), *Jet2.com* (from Edinburgh, Blackpool, Leeds-Bradford, and Newcastle), *Virgin Express* (from Brussels), *Ryanair* (Dublin, London-Stansted, London-Luton, Bremen, Glasgow-Prestwick, Liverpool, Nottingham-East Midlands).

Only if you have told us in advance, AND WE HAVE REPLIED SAYING WE SHALL, will our drivers pick up late arrivals after 21.30 hours on July 1st at Murcia Airport once the *Iberia/Air Nostrum* plane from Madrid has landed (the reason is because the drive to Caravaca takes 75 minutes and on the first evening of our first session we like all our helpers to have dinner together at our Caravaca base, and certainly no later than 22.30 hours). On the other hand, we can set you down from 15.00 hours onwards, whichever of the

afternoon or evening direct flights to London or Madrid you choose. Provided that **beforehand** you have given us your **flight number**, then if your plane is delayed, and arrives late at Murcia, we will wait for you, so don't panic! But if you have **not** given us your flight number beforehand, and your plane arrives late, it is unlikely there will be anybody to meet you at the airport (unless, if you're very lucky, a driver may be waiting for someone *else* off the same late flight who **had** given us the necessary details beforehand). **IT IS ALSO IMPORTANT TO STRESS THAT WE NEED YOUR FLIGHT DETAILS BEFORE JUNE FIRST 2014, EVEN IF YOU ARE NOT COMING UNTIL JULY 22nd, BECAUSE AFTER JUNE 28th WE DO NOT HAVE REGULAR OR RELIABLE INTERNET ACCESS WHEN WE ARE IN THE FIELD AT CUEVA NEGRA AT CARAVACA BECAUSE THE CAVE IS IN THE COUNTRYSIDE WHERE THERE IS NO INTERNET COVER AND ONLY VERY POOR AND INTERMITTENT CELL PHONE COVER, AND THEREFORE WE MAY WELL FAIL TO RECEIVE EMAIL MESSAGES OR TELEPHONE CALLS SENT BY YOU BETWEEN JUNE 28th AND JULY 22nd: SO NO LATER THAN JUNE 1st WE NEED ALL YOUR FLIGHT DETAILS UPTO AUGUST 12th IF YOU WANT US TO PICK YOU UP BY US AT MURCIA AIRPORT.** (Why June 28th and not July 1st? It is because we go to Caravaca two days **before** we pick you up, in order to get the site ready for excavation by you.) Transport between Murcia Airport and our accommodation bases is free of charge to helpers who arrive for the Tuesday afternoon-evening rendez-vous WHO HAVE GIVEN US THEIR FLIGHT DETAILS **BEFORE JUNE FIRST 2014**. If you are flying back to Madrid, avoid the early morning flight because we cannot ferry you to Murcia Airport to catch it and you will therefore have to hire a taxi at your own expense.

There are several operators of low-cost flights from the UK to Murcia-San Javier. You should check for up-dating of services on the web or through your travel agent, although we also shall try to keep ourselves informed so as to be able to offer advice. Summer flight schedules are usually available by the beginning of April. Train and coach times are usually much the same, though there may be additional services scheduled during the busy Summer holiday months.

Here are **Ryanair** flight times advertized from/to London-Stansted or London-Luton and Murcia advertized for Tuesdays in 2013, **so check with Ryanair to find out just what its 2014 flight times will be.**

Airport	Time
Dep. London-Stansted	18.10 h
Arr. Murcia-San Javier	21.45 h
Dep. London-Luton	14.25 h
Arr. Murcia-San Javier	18.00 h
Dep. Murcia-San Javier	16.55 h
Arr. London-Stansted	18.30 h
Dep. Murcia-San Javier	18.25 h
Arr. London-Luton	20.00 h

Here are **Easyjet** flights advertized from/to London-Gatwick and Murcia on Tuesdays in 2013, **so check with Easyjet o find out just what its 2014 flight times will be.**

Airport	Time
Dep. London-Gatwick	12.50 h
Arr. Murcia-San Javier	16.25 h
Dep. Murcia-San Javier	16.55 h
Arr. London-Gatwick	18.30 h

British travellers may like to know that there in recent years there have been also some *British Airways* flights to Madrid from Birmingham and Manchester and to Alicante from London-Gatwick, and that there were also some flights from these airports to Frankfurt where connecting flights onward to Murcia-San Javier Airport can be taken. I do not know what is available in 2014.

Intercontinental travellers, please note that if you are flying back from Murcia to London in the afternoon –especially if flying on budget airlines such as **Ryanair** or **Easyjet**, and then on to another destination from London, *you ought to arrange to spend the night in London* because flights from Spain to London are *very, very often delayed* in Summer when air traffic between northern Europe and the Mediterranean holiday coast is always *very heavy indeed* and because scheduled flights are given priority for take-off or landing budget airline flights can easily be delayed by a few hours without warning. You must take into account the likelihood of this occurring *so as not to miss your onward connecting flight* (e.g. to the USA or wherever). It could be very imprudent indeed to think you can arrive at London Gatwick at, say, 19.00 h and be in time to catch a 22.00 h plane from that same airport to the USA - and if you have to change airports and get to Heathrow, allow a good six hours, as you may have to collect your luggage at Gatwick before getting the coach from Gatwick to Heathrow (which takes at least an hour - more if traffic is heavy) and once there you'll have to check it in again before your next flight is closed.

Iberia Airlines Please bear in mind that, at Spanish airports, flights are **closed one hour before scheduled take off**. This means that if you are going to change planes in Madrid, even between national flights, let alone for international and intercontinental flights, then when you arrange your flights you must make sure that you allow around **two hours** between your plane's scheduled landing (it might be delayed) and the take-off of your next plane. If you're coming from the USA. it is probably quickest and cheapest to change from a US carrier to *Iberia (Air Nostrum)* at Madrid (*Air Nostrum* is simply a subsidiary company belonging to *Iberia Airlines* and many internal flights in Spain are serviced by this subsidiary), as your US carrier may well include the price of one onward flight within Europe in the cost of your ticket to Madrid.

Alicante: Please note that even though there are *British Airways* flights between *London-Gatwick* and *Alicante International Airports*, **we refuse absolutely to pick up or set down travellers at Alicante Airport, under any circumstances whatsoever**. We refuse to do this because *Alicante International Airport* is both too far from our centres of activity and its air-traffic density is so very great that the frequent long delays in arrival and departure times there could mean that our staff assistants who drive the vehicles might be inconveniently away for unpredictably long periods. Also, there are so many hundreds of flying holidaymakers there at all times of the day

and night during the summer, that you could easily miss us and we could easily miss you, whereas *Murcia-San Javier Airport* is very small and quiet, and we've never missed meeting anyone there yet! We appreciate this might disappoint some international travellers, but the smooth running of our project must take precedence over individual convenience of travellers.

If you decide, however, to travel to Alicante Airport, on arrival there do **NOT** try to make your way to our pick-up rendez-vous at Murcia-San Javier Airport. Instead you **MUST MAKE YOUR OWN WAY** to our **bases at Caravaca or Dolores de Pacheco**, respectively. **You will have to go first to Murcia**. A regular coach service leaves every two hours from Alicante Airport for Murcia city bus station (taking 55 minutes), from 07.15 h to 21.15 h, and the return service leaves Murcia every two hours from 07.00 h to 21.00 h.

About the buses to Caravaca, to San Javier, and to Los Alcázares from the *Estación de Autobuses* (Murcia city bus station) (AND SEE BELOW FOR MORE DETAILS, UNDER **TRAVEL OPTIONS BY RAIL OR COACH**)

On arrival at Murcia city bus station, you must find the counter for the service you need (i.e. Caravaca for Cueva Negra; or San Javier or Los Alcázares for Sima de las Palomas), and buy your ticket, which you then show to the bus driver when you board.

On working week-days, buses leave for Caravaca at ten minutes past the hour, every hour from 06.10 h through to 21.10 h (there are fewer buses on public holidays and weekends) and the journey takes roughly an hour-and-a-half. Return buses leave Caravaca for Murcia at ten minutes past the hour, every hour from 06.10 h through to 21.10 h (except that instead of 15.10 h it leaves at 15.30 h).

On working week-days, buses leave for San Javier on the hour every hour from 07.00 h to 21.00 h (there are fewer buses on public holidays and weekends) and take three-quarters of an hour; the return trip leaves at half-past each hour.

On working week-days, buses leave for Los Alcázares at half-past the hour every hour from 08.30 h to 20.30 h and you should get off at the first stop where the road on which you are travelling from Torre Pacheco enters the town of Los Alcázares (there are fewer buses on public holidays and weekends) and the journey takes roughly an hour; return journeys run from 07.20 h to 19.20 h once an hour but with varying departure times (consult us).

Alicante, again: If you do decide to travel through *Alicante International Airport*, then on your head be it! You, and you alone, are responsible for getting from there to our field bases. You must go to them *directly*, without going to Murcia-San Javier Airport, (1) because it will be cheaper and much less time-consuming for you, especially if you are going to Caravaca to help at Cueva Negra, and (2) because if your flight were to be delayed and you were to arrive after our rendez-vous pick-up had left Murcia-San Javier Airport, you would find yourself absolutely stranded, at an airport in the middle of nowhere, if you had to get to Caravaca on a Thursday night! - and there would be no way we could help you as we would be a long way away by that time. You would have been better off heading for Murcia city bus station from Alicante in the first place, because even if you were to have missed the last bus up to Caravaca from Murcia, you would nevertheless be in a city with lots of hotels where you could easily find a bed for the night before getting a bus up to Caravaca next morning (Friday).

Low-budget travellers from the British Isles might also be interested in low budget flights to **Madrid, Valencia, or Barcelona**, that fly out of other British and European cities. Coaches are much cheaper than trains in Spain and there are many overnight coaches from Madrid or Barcelona which save you the cost of a bed (whereas overnight trains nowadays have disappeared in Spain).

IT IS MOST IMPORTANT TO REMEMBER THE MURCIA-SAN JAVIER AIRPORT IS BY THE SEA AND THE MURCIAN COAST IS A MAJOR HOLIDAY RESORT AREA, SO HIGH-SEASON FLIGHTS IN THE JULY-AUGUST HOLIDAY PERIOD GET FULLY BOOKED UP SEVERAL WEEKS AHEAD. SO IF YOU ARE COMING YOU SHOULD FINALIZE YOUR TRAVEL ARRANGEMENTS, BY THE END OF APRIL IF YOU WANT TO BE SURE OF GETTING A SEAT THROUGH TO MURCIA-SAN JAVIER. REMEMBER THAT ON-LINE BOOKING WITH COMPANIES LIKE RYANAIR OR EASYJET OFTEN GIVES YOU A VERY CHEAP DEAL IF YOU BOOK A FEW MONTHS BEFOREHAND.

IF YOU ARE MAKING ALTERNATIVE TRAVEL ARRANGEMENTS AND WANT US TO TRY TO MEET YOU AT ANY OTHER TIME OR PLACE, IT IS ESSENTIAL THAT BY JUNE 1st YOU HAVE INFORMED ME IN WRITING. YOU MUST INFORM ME DIRECTLY BEFORE JUNE 1st 2014, either BY EMAIL to mjwalke@gmail.com BY WRITING TO ME BY AIRMAIL:

Professor Michael Walker

**Department of Zoology and Physical Anthropology
Biology Faculty
Murcia University
30100 Murcia
Spain**

Please note that if we meet you at any place, date, or time of day other than the official rendez-vous place, dates, and times you will be expected to pay for our petrol even if we have agreed to come to meet you or set you down, but **whether or not we agree to do so will depend on whether it is convenient for us**, because a major field project has many commitments which tie up our vehicles and staff.

Unless you have received a reply from me personally, that we shall meet you, you **MUST** find your own way to the accommodation base at your own expense. For *Cueva Negra*, our base is the residential Ascrúz state-run school (Colegio Ascrúz) on the edge of the town of Caravaca de la Cruz, and for *Sima de las Palomas* it is the state school at Dolores de Pacheco where we can be contacted via the village Civic Centre where we take our meals at its restaurant.

If you get into difficulties when travelling to us, and cannot arrive at an agreed time or place, try phoning us, so that we aren't hanging around unnecessarily, and can try to help you with an alternative rendez-vous. You can try my cell phone number 620-267104 (34-620-267104 from outside Spain) though when I am in the field this number is very likely to be out of cover (especially at *Cueva Negra*) and you would need to ensure before leaving your country of origin that your own mobile phone is set up so as to be able to dial cheaply within Spain and not via a hideously expensive international phone call that re-routes your call first through your country of origin and back again to Spain!!! If dialling from a public phone box, we recommend you put a one euro (1€) coin into the phone and dial either 968-700844 (the Ascrúz school at Caravaca, after 15.00 hours Central European Time (CET) when we have got back from the field; 34-968-700844 from outside Spain) or 968-173200 or 685-111111 (Dolores de Pacheco Civic Centre, after 15.00 hours Central European Time (CET) when we have got back from the field; 34-968-173200 or 34-685-111111 from outside Spain), depending on which field base you need to get to. Check on the time zone before you phone; 14.00 hours UK time is equivalent to 15.00 hours CET, but if you're phoning from the USA there are several hours of difference!

If you arrive at any place, date, or time of day, *other* than the rendez-vous place, dates, and times, as specified above, you may well have to make your own way to our base at your own expense. Whether or not we might be able to agree to meet you somewhere to get you to our base will depend on whether it is convenient for us, because a major field project has many commitments which tie up our vehicles and staff. Even if you have contacted us and we have agreed to help you out, you will be expected to pay for our petrol even if we have agreed to come to meet you or set you down.

Unless you have received a reply from me personally, that we shall meet you, you *MUST* find your way to the accomodation base at your own expense. In that regard, the following information may be helpful.

Cueva Negra: From Murcia Airport to our accomodation base at *Caravaca's* "Colegio Público "Asacruz" de Educación Especial" (Residential Public School "Asacruz" for Disabled Children), the distance of 120 kilometres means your taxi fare will cost you at least €80 euros a head and maybe a good bit more. It could therefore be *very* expensive for you if you fly in on a day or at a time other than the scheduled rendez-vous ones.

Sima de las Palomas: From Murcia-San Javier Airport to our accomodation is at the village school at *Dolores de Pacheco* but we eat three times a day at its village "Centro Cívico" (Civic Centre) which is only about 8 kilometres by road from the Airport, and so if you are flying in on a day or at a time other than the scheduled rendez-vous ones, we can probably pick you up at the Airport, provided we have advance information; if we do not, a taxi to our accomodation base from the Airport should cost about €10 euros.

TRAVEL OPTIONS BY RAIL OR COACH

If you plan to arrive by rail or coach on a rendez-vous Thursday afternoon, do **NOT** head for *Murcia-San Javier Airport* **without first consulting me, Michael Walker, directly**, because it will probably be **SIMPLER** for us (and you) to arrange to meet you that day - elsewhere, and at another time- especially if you are coming to *Cueva Negra*: e.g. at *Calasparra* railway station if you're coming by train, or where the coaches from Murcia stop in *Caravaca* itself if you're coming by coach. Under **NO** circumstances will we meet passengers off trains at Murcia city railway station, because there is always such a throng of travellers there that you could easily miss us or we could easily miss you. The distance between *Caravaca* and *Murcia-San Javier Airport*, together with our shortage of cars and drivers, means that unfortunately there is very little room indeed for flexibility in our arrangements to meet people coming to *Cueva Negra* other than at the official Thursday rendezvous time and place. We can be more flexible with regard to people coming to *Sima de las Palomas* because our base at *Dolores de Pacheco* is quite near to both the *Murcia-San Javier Airport* and the *Balsicas-San Javier* railway station.

Cueva Negra: If you plan on coming to *Caravaca* by rail from Madrid, take the Madrid-Murcia-Cartagena train to the station of *Calasparra*. If you have not been informed by me that you will be met by us at *Calasparra* station, then you *must* find a taxi to our accomodation base at *Caravaca* (20 kilometres away) at your own expense. You need to look very carefully at the train time-table (see below) for trains plying the Madrid-Albacete-Murcia-Cartagena line, because no more than **TWO** of the 4 or 5 daily trains each way, stop at *Calasparra* station and so you must make sure you take one that does.

If you want to come to *Caravaca* by train from Barcelona, you will have to take a train to Murcia from Barcelona on the Wednesday, spend that night in an hotel at Murcia, and catch an early bus up to *Caravaca* from Murcia city bus station on the Thursday morning (they leave hourly at ten-past the hour and take 90 minutes); it would be simpler and cheaper for you to take an overnight long-distance coach from Barcelona to Murcia city bus station. Your return to Barcelona from Murcia by train from *Caravaca* would mean catching probably a through train which leaves at about 13.30 h from Murcia railway station, after getting to Murcia city bus station by bus from *Caravaca* during the morning, or you could simply change to a long-distance coach at the bus station in the city. The railway station and bus station in Murcia are at opposite ends of the city, and a long hot walk with luggage in the July sun!

One small snag, if you insist on prebooking your tickets from outside Spain, is that travel agents (especially in the U.S.A.) may well tell you that they can only sell you tickets between Murcia and *Calasparra* at the full cost of the Murcia-Albacete part of the Cartagena-Murcia-Albacete-Madrid line: this would be very expensive for you and you'd be better off buying your ticket at Murcia station for the Murcia-*Calasparra* leg of your journey.

A better way is to book your tickets yourself on-line over the web from the Spanish national railway company *RENFE*, and you can get information in different languages about how to do it at <ginfo@renfe.es> ("gl" here stands for "grandes líneas" or "great lines", i.e. "main lines"; do not read it as "g1" because it is GL not G1 !) It is best to book on-line to be sure of a seat. You are not allowed to stand as a passenger. Prices of tickets are slightly less if you buy on-line than at the station, but there is due to be a price rise soon because value-added tax is to be increased. Price rises are likely in 2014. A couple of years or so ago, on the Murcia-Cartagena railway line, the economy class single fare between Madrid and Murcia was about 45€ euros (about 40€ to *Calasparra*, about 50€ to *Balsicas-Mar Menor* and about 55€ to *Cartagena*), but if you buy a *return ticket* at one go you may be able to get a 20% discount; the preferential class single-fare prices are about 70€ to Murcia (about 65€ to *Calasparra*, about 75€ to *Balsicas-Mar Menor* and about 85€ to *Cartagena*). On the Barcelona-Cartagena railway line, the economy class single fare between Barcelona and *Balsicas-Mar Menor* Murcia was about 55€ euros and the preferential class fare was about 80€, but if you buy a *return ticket* at one go, then you get a 20% discount. Since the single fare from Murcia to *Cartagena* was only about 4€ economy class and less than 6€ preferential class, and since *Balsicas-Mar Menor* is about half-way between those two cities, the onward cost to *Balsicas* from Murcia is trivial, whether you come from Madrid or Barcelona by train. However, if you are booking from outside Spain you may be told you have to book right through to *Cartagena* if you are going to *Balsicas-Mar Menor* though the extra cost will be very slight.

If you are coming by train from Madrid to spend some days at **Cueva Negra** followed by some days at **Sima de las Palomas**, then you could book a return ticket to *Balsicas-San Javier* railway station, from which you will be returning to Madrid, but get off at *Calasparra* railway station when you come to join us. *Calasparra* is nearer to Madrid, but you will find it is cheaper to book a return ticket to *Balsicas-San Javier* than to book two single tickets. **UNDER NO CIRCUMSTANCES** will we meet passengers at Murcia city railway station (*Murcia "El Carmen"*), as there is always such a throng of travellers there that you could easily miss us or we could easily miss you. If you are coming by train from Barcelona to dig at both *Cueva Negra* and *Sima de las Palomas* afterwards, you could book a return to *Balsicas-Mar Menor-San Javier* but get off at *Murcia* to change for *Calasparra*.

Cueva Negra: If you plan on coming to *Caravaca* by coach you will need to get a coach to Murcia city bus station and then change to the local coach out to *Caravaca*. From both Madrid and Barcelona there are several daily coaches to Murcia city bus-station; however, if you take a daytime coach - particularly from Barcelona, which is a long journey down to Murcia, or those which leave Madrid in the late afternoon rather than a morning coach - then you will arrive too late in the evening to catch the last *Murcia-Caravaca* coach, and will have to find an hotel for the night in Murcia city. To avoid that expense, you can catch *overnight* coaches to Murcia city on Wednesday from both Madrid and Barcelona, and then an early Thursday morning bus from Murcia out to *Caravaca*. From the *Caravaca* bus station it is about a kilometre and a half to our accommodation base at the "*Colegio Público "Asacruz" de Educación Especial*" (Residential Public School "Asacruz" for Disabled Children). If you want us to pick you up at the *Caravaca* coach-stop, phone us at the school (dial 968-700844) when you arrive, and, if we are there, we will do so (between 07.30 and 14.30 hours we are *NOT* there, because we are all at *Cueva Negra* excavating). Otherwise you can either take a taxi to the school, or walk if your luggage is a backpack. If walking, ask, first, how to get to the large "Templete" monumental fountain (a neo-Classical structure of columns and a cupola). It is beside a set of traffic-lights where you take the right-hand fork, which is the road signposted to Moratalla. Walk up the road for about 300 metres until you see a sign on the left to "*Fuentes del Marqués*" and *Colegio Asacruz* which, after walking about 800 metres along a country lane, is a large concrete modern building up on a low bluff on your right). There is a short-cut if you're daring enough: once you've left the *Templete* behind you, and have gone about a hundred metres along the road to Moratalla, at the next set of traffic-lights you come to (beside a bar called "Zaián"), you can take the left-hand street, and, after about another 200 metres, where the street suddenly bends to the left, you, instead, go straight ahead along a pedestrian walk which passes some houses on your right and then becomes a very wide country footpath between a shady avenue of trees, which you follow for about 600 metres, until you reach a tarmac lane where you turn right and then take the first left up to the school.

Sima de las Palomas: If you plan on coming from Madrid or Barcelona by rail to *Dolores de Pacheco*, you must catch the Madrid-Albacete-Murcia-Cartagena or Barcelona-Murcia-Cartagena trains to the station of *Balsicas-San Javier* which is a compulsory stop for *ALL* trains. In fact one of the Barcelona trains that stops at *Balsicas-San Javier* starts at the large southern French city of Montpellier. If you have given us advance notice of your time of arrival, we can probably meet you; if not, you must find a taxi - the distance is about 15 kilometres and may cost you about 15€ euros. **BUT IT IS NOT CERTAIN THE TRAINS FROM BARCELONA TO MURCIA AND CARTAGENA WILL STILL BE RUNNING IN JULY 2014 (SEE BELOW).**

If you plan on coming from Madrid or Barcelona by coach to *Dolores de Pacheco*, you have several options. From both cities there are long-distance coaches to Murcia city bus station. If you take overnight coaches to Murcia city from Madrid or Barcelona on Mondays you can easily get buses that leave in the early hours of Tuesday from the Murcia city bus station which will take you *Los Alcázares* which is about 6 kilometres from *Dolores de Pacheco*, and, provided we have advance information about the place and time of your arrival, we may well be able to pick you up from *Los Alcázares*. You can always try phoning us at the *Dolores de Pacheco "Centro Cívico"* (dial 968-173020), but remember we are not there between 07.30 and 14.30 as we are at *Sima de las Palomas* excavating. In any case, a taxi should only cost you about 12€ euros from where you leave the coach.

It is rumoured there will be fewer trains running to Murcia in 2014 than last year. The following shows the approximate times of trains that were advertized on the Madrid-Albacete-Murcia-Cartagena railway line on **Tuesdays** in 2013 which does not involve your changing trains anywhere - except for the *first* train in the table. However, some of the trains shown may be taken off, according to rumours, owing to severe economic problems in Spain. Times have been rounded to the nearest 5 minutes (trains are not very punctual). Take very good note that only **two** of them each way stop at Calasparra, whereas they **all** stop at Balsicas-Mar Menor. You should check them first over the web by going to *Renfe* on the web or sending an email to <glinfo@renfe.es>, or at the railway station, or else with a travel agent (note: the times may be different on *other* days of the week, especially at weekends and on public holidays).

YOU MUST NOT GET OFF, OR GET ON, ANY TRAIN AT MURCIA CITY "EL CARMEN" RAILWAY STATION, BECAUSE WE DO NOT PICK UP OR SET DOWN THERE; THE BIG CITY STATION IS SO BUSY THAT WE CAN ALL TOO EASILY FAIL TO MEET UP WITH ANY PASSENGERS WHO GET OFF THERE. However, if booking on-line you may nevertheless have to make your bookings to/from Murcia city (*Cueva Negra* session), or Cartagena (*Sima de las Palomas* session), if the on-line booking system does not let you book on-line to/from Calasparra (*Cueva Negra* session), or Balsicas-Mar Menor (*Sima de las Palomas* session), but all the same you **must get on/off your train only at Calasparra/Balsicas-Mar Menor railway stations**; if you oversleep on the train and get carried downline to Murcia or Cartagena, you will have to make your own way to our bases, probably by hiring a very expensive taxi (you wouldn't be the first to have done that!!!!)

dep. Madrid-Chamartín	dep. Madrid-Atocha	arr. Calasparra	arr. Murcia	arr. Balsicas-Mar Menor
07.00 h	07.25 h	10.50 h	11.45 h ends here, <i>but you can then change to a Murcia-Cartagena train: dep. Murcia 12.05 h</i>	12.35

18.35 h	19.05 h	19.55 h	23.15 h	23.30 h

* * If you are coming to *Cueva Negra* and take any of these three trains, then, because we do **not** pick up arrivals at Murcia city railway station, once you get to Murcia city railway station you should take a taxi to Murcia city bus station (*Estación de Autobuses*) and from there take the bus from Murcia to *Caravaca*. **BUT OVER THE YEARS WE HAVE NOTICED THAT SPANISH RAILWAYS HAVE HAD A BAD HABIT OF MAKING CHANGES IN THE TIME-TABLES, AND PARTICULARLY REGARDING JUST WHICH OF THE DAILY TRAINS MAY STOP AT CALASPARRA, SO THE ABOVE ARRANGEMENTS WHICH HAVE BEEN ANNOUNCED MIGHT BE CHANGED EVEN YET AGAIN IN 2014 – SO CHECK WITH YOUR TRAVEL AGENT!**

Madrid-Chamartín railway station is the Madrid terminus on the northeastern edge of the city, but all trains *also* stop at Madrid-Atocha railway station which is in the heart of Madrid and may be more convenient from some hotels. Return tickets are 20% cheaper than buying a single ticket each way. If you're coming to both *Cueva Negra* and *Sima de las Palomas*, then buy a return ticket to Balsicas but get off at Calasparra, as it will be cheaper for you than buying two single tickets.

Below were the advertized times of trains on the Barcelona(Sants)-Valencia-Alicante-Murcia-Cartagena railway line on *Tuesdays* in 2013 showing the stations of interest to us, but you should check first at the station or with a travel agent (note: they may be different on *other* days of the week, especially weekends and public holidays). Times are shown for the *Sants* station at Barcelona. **HOWEVER, ALTHOUGH THESE TRAINS SEEM TO BE RUNNING UNTIL MAY, IT IS NOT CLEAR THEY WILL STILL BE RUNNING IN JULY AND AUGUST AS THEY MAY BE TAKEN OFF ON ACCOUNT OF CUT-BACKS TO COPE WITH THE DREADFUL ECONOMIC CRISIS IN SPAIN: SO YOU MUST CHECK BEFORE BOOKING OR YOU MAY BE IN FOR A MOST UNWELCOME SURPRISE.**

This train takes you directly from Barcelona to Balsicas-Mar Menor:

dep. Barcelona-Sants	(arr. Murcia)	arr. Balsicas-Mar Menor
12.00 h	(18.50 h)	19.25 h
dep. Balsicas-Mar Menor	(arr. Murcia)	arr. Barcelona-Sants
13.10 h	(13.45 h)	20.40 h

The following involve **changing trains** at Murcia:

dep. Barcelona-Sants	Arr. Murcia	dep. Murcia	arr. Balsicas-Mar Menor
15.00 h	21.50 h Train goes NO further	-----	-----

13.10 h	13.50 h	13.55 h	20.40 h
-----	-----	26.45 h	23.58 h

Not shown here – because connections with Murcia are complicated - are the high speed (and very expensive) “*Euromed*” trains that ply between Barcelona and Alicante taking only some three hours; for information about these consult a travel agent.

It is also possible to come by train from Montpellier in France via Barcelona to Murcia where you will have to change to get to Balsicas or Calasparra.

There are no direct coaches between Madrid and Caravaca. You have to travel via Murcia city bus station.

As a rough guide, below were advertized times of coaches and buses on *Tuesdays* two or three years ago (these could change in the summer and in any case may be different on other days of the week, and may be somewhat different in 2014. All “*ALSA*” coaches leave from Madrid’s “*Estación del Sur*” bus station (ES), though one of them – which is also very much more expensive than the rest - also not only called there back in 2010 but also started and finished at Madrid’s *Barajas Airport Terminal 4* (BAT4) (you must check 2014 schedules, though).

dep. Madrid BAT4	dep. Madrid ES	arr. Murcia
-----	08.00 h	14.00 h

* Fast coach, slightly more expensive than the others (53€ single in 2013 as against 47€; 100€ return as against 89€).

Some of the coaches from Madrid or Barcelona go only as far as Murcia, whereas others stop at Murcia but then go on either to Cartagena and La Manga or to Los Alcázares or Torre Pacheco (especially those from Madrid), or to the Andalusian cities of Almería, Granada, Málaga, Seville and Algeciras (especially those from Barcelona). Helpers at *Cueva Negra* will have to get off at Murcia city bus station and change to the bus to Caravaca. Helpers at Sima de las Palomas can get off at Murcia city bus station and change to buses to either San Javier or Los Alcázares, but there are also some coaches that go on to one or other of those two towns and they are also shown, although arrival times are very rough-and-ready as they depend very much on traffic-density on crowded holiday-season roads (in some cases they get to San Javier or Los Alcázares by going not through Murcia but through Elche). The times will doubtless be subject to change and there will certainly be more coaches and more times scheduled during the busy holiday season of July and August. I've not been able to find out about arrival times at San Javier so far, I'm sorry to say.

From Murcia city bus station (*Estación de Autobuses*), *Cueva Negra* helpers can catch buses to Caravaca, where we can probably meet you at the bus stop provided we know on which bus you are arriving and provided it is after 14.30 h (before then we are excavating at *Cueva Negra*), which will save you a thirty-minute walk out to the "*Colegio Público "Asacruz" de Educación Especial*" (Residential Public School "Asacruz" for Disabled Children) which is our base and a bit hard to find until you've learnt to find your way around as it lies on the northwestern outskirts of the town: although there is a short cut, you won't get lost if you take the long way round, by asking first for the "Templete" monumental fountain and, once there, take the Moratalla road for about 300 metres until you see a sign on the left to "*Fuentes del Marqués*" and *Colegio Asacruz* which, after going about 800 metres along a country lane, is up on a low bluff on your right). *Sima de las Palomas* helpers can catch buses either to San Javier or Los Alcázares (each of which is about 6 kms from Dolores de Pacheco) where we may just be able to meet you though **we would most certainly need advance notice of your time and place of arrival**, otherwise you'll have to find a **taxi** to the "Centro Cívico de Dolores de Pacheco" – the Civic Centre where we stay at Dolores de Pacheco, because there's no way in the world you're going to want to walk carrying your luggage for 6 kilometres in the searing heat of July and August (it's a lot hotter there than at Caravaca).

About the buses to Caravaca, to San Javier, and to Los Alcázares from the *Estación de Autobuses* (Murcia city bus station):

At Murcia city bus station, find the counter for the service you need (i.e. Caravaca for *Cueva Negra*; or San Javier or Los Alcázares for *Sima de las Palomas*), and buy your ticket, which you then show to the bus driver when you board.

On working week-days, private buses ("*Autobuses Costa Cálida, S.L.*") leave for **Caravaca** at ten minutes past the hour, every hour from 06.10 h through to 21.10 h (there are fewer buses on public holidays and weekends) and the journey takes roughly an hour-and-a-half. Return buses leave Caravaca for Murcia at ten minutes past the hour, every hour from 06.10 h through to 21.10 h (except that instead of 15.10 h it leaves at 15.30 h).

On working week-days, the public "*LATBUS*" (no. 70) buses leave for **San Javier** on the hour every hour from 07.00 h to 21.00 h (there are fewer buses on public holidays and weekends) and take three-quarters of an hour; the return trip leaves at half-past each hour. San Javier is *not* the end of the line of the no. 70 bus, as many of these buses go further on to San Pedro del Pinatar, Torre de la Horadada and some as far as Campoamor.

On working week-days, private buses ("*Gómez García y Hermanos, S.A., Autobuses*") leave for **Los Alcázares** at half-past the hour every hour from 08.30 h to 20.30 h and you should get off at the first stop where the road on which you are travelling from Torre Pacheco enters the town of Los Alcázares (there are fewer buses on public holidays and weekends) and the journey takes roughly an hour; return journeys run from 07.20 h to 19.20 h once an hour but with varying departure times (consult us). Some of these buses finally end at the beach resort of **Los Narejos** though there are some that go on to as far away as **La Unión**; **although these pass quite near to our base at Dolores de Pacheco only one bus each working week-day from Murcia to Los Alcázares and La Unión actually passes through our village and can drop you off there, which is the one that leaves Murcia at 20.30 h and reaches Dolores de**

Pacheco at 21.25 h; likewise the only bus back to Murcia from Dolores de Pacheco calls there at 07.30 h, reaching Murcia at 08.30 h.

If you're a full-time student, bring an *International Student Card*; it may get you to discounts on trains and long-distance coaches. Young people can buy *Interail* travel passes for Europe but you will probably have to be prepared to pay supplements on most of the Spanish trains that you would want to use - even so, the overall discount may be worth having if you're thinking of visiting other countries whilst in Europe.

Seeing Granada and the Alhambra Palace

From Murcia bus station there are several coaches every day to Granada which take roughly four or five hours each way. To see the breathtakingly beautiful Moorish architecture of the mediaeval Alhambra palace you need to stay overnight in Granada (I recommend the *Hotel Tilos* in the Plaza Birrambla in the heart of the old city) and get up at 6 o'clock to climb the hill to the palace and get a good place in the queue for tickets so that you can join the morning visits and don't end up only with an afternoon ticket that means going back down into the city and then having to trudge back again up the hill in the sizzling early afternoon heat - so you'll need to spend two nights there at least. You could get a coach on the Thursday when your stay ends, see the Alhambra on the Friday, get a coach up to Madrid on Saturday, and fly out of Madrid on the Sunday. You could hire a drive-yourself-car which you could prebook to pick up on the Thursday at *Murcia-San Javier Airport* and return, say, to *Madrid-Barajas Airport* on the Saturday, and you'll find *Hertz*, *Avis* or *Eurocar* will give you cheaper rates than those they give in Spain provided that you book it from outside Spain *BEFORE* you leave your own country (shift-stick gears are much cheaper to hire than automatics). Coaches for Granada leave Murcia city bus station at 08.30 (fast), 09.00 (slow), 11.30 (fast), 16.00 (both slow and fast coaches) and 22.00 hours (slow) - the 16.00 fast one is very convenient as it gets you there in a fast three-and-half hours so you arrive in good time to check in to your hotel and get a good night's sleep before waking early to go up to the Alhambra palace.

EARLY AND LATE ARRIVALS; STAYING ON IN SPAIN AFTERWARDS

I am used to coping with both early arrivals and requests for assistance from helpers who want to visit Murcia, Cartagena, or other places in Spain, after excavating with us. In all of these cases (including late arrivals), it helps me to help you if I have received advance notice of your needs and wishes - preferably by May 1st and, in any case *NO LATER* than June 1st because once I am looking after you in the field I cease to be immediately contactable by phone, fax or e-mail.

Phone calls after June 28th from late arrivals should be made between 15.00 and 24.00 hours Central European Time, from June 28th-July 22nd to 968-700844 (from within Spain) or 34-968-700844 (from countries outside Spain), and for July 22nd to August 12th to 968-173020 or 685-111111 (from within Spain), or 34-968-173020 or 34-685-111111 (from countries outside Spain). You can also try my cell phone though I may well be out of range if I am at Cueva Negra: the number to ring is 620-267104 from inside Spain or 34-620-267104 if you are outside Spain.

Don't despair! In worst case scenarios, I have offered the hospitality of our home to helpers who have arrived early, and we have helped others organize both hotel accommodation after they have excavated with us and guest-house ("pensión") accommodation and personal tutors in the Spanish language! So, the short answer is, "Yes, we will do our best to help your personal requirements", and the long answer is, "We can do that best, if you help us by giving me two or three months' advance notice of what you want to do". Remember, we are in a prime tourist area and planes and accommodation are in great demand during July and August, **SO DO YOUR BOOKING EARLY IN THE SPRING.**

For **EMERGENCY RAPID CONTACT**, up to about June 15th please contact my fax which is 34-868-883963 from outside Spain or 868-883963 inside Spain, or my e-mail which is *walker@um.es*. If there is an **EXTREME EMERGENCY**, and you need urgently to phone me *BEFORE June 30th* you can try to reach me (I cannot guarantee to be there as I am often travelling in England at the end of June) by telephone *provided you find out from the international operator that the time is between 6 a.m. and midnight CENTRAL EUROPEAN TIME* - so as not to wake up my family during the night. If dialling from a country outside Spain try (home) 34-968-265608, (home) 34-966-769367, or (work) 34-868-884997, or cell phone 34-620-267104. If dialling from anywhere within Spain those numbers become 968-265608, 966-769367, 868-884997 and 620-267104.

FUNDING OUR FIELD RESEARCH

CONTRIBUTIONS AND RELATED MATTERS

For attendance at one full 21-day session your contribution is rated at 50 euros, 50€, per day, for bed, light breakfast, mid-morning sandwich, cooked lunch, cooked supper, laundry, instruction, transport between base camp and site, excursions, transport between Murcia Airport to our base on official pick-up and set-down dates, 2014 membership of MUPANTQUAT (attendance at both sessions entitles you to a reduction to 45€ per day; first-time attendance for less than a full 21-day session is rated at 60€ per a day). A non-returnable deposit is required and because of that you might want to take out holiday insurance in case of last-minute inability to come. The deposits are made to MUPANTQUAT and are rated at 250€ per week for each week of your intended stay, with the full balance payable on arrival.

Deposits **guarantee your reservation** so it is advisable to make them, for whichever session (whether Session 1 or Session 2) **before May 1st** in order to avoid disappointment. If no deposit has been made by May 31st the place will be reassigned to applicants on the waiting-list.

Deposits, alas, are non-returnable. The reason for that is as follows. Because the Murcian region is a Mediterranean coastal holiday-resort area that is very popular with both Spaniards and other European vacationers, inward-bound and outward-bound flights

and trains are heavily booked well in advance of the July-August high summer season. They are often fully booked up by early June. So even if we have someone on the waiting-list when you drop out, that person might not be able to book a flight only a very few weeks before the session begins. This means we might well have to use deposited moneys in order to try to tempt one of our local undergrads to take your place instead of taking a well-paid vacation job in a bar or restaurant beside the packed beaches or at a golf resort, because, in order to have adequate help on site at all times so that we can carry out our excavations efficiently we need always to have on site a basic minimum number of people, below which we cannot work smoothly.

Our annual summer field school and excavations rely on self-funding. As just stated, a major field project has a number of fixed costs that must be met; indeed, one such cost is in maintaining a skeleton staff on hand to conduct the basic physical work of excavation in the event of a short-fall in participants. If intending short-listed helpers who have paid their deposit are unable to come at the last minute, it will very probably be far too late even for airline tickets to be obtained at all by any other possible helpers who had been relegated to a waiting-list, and perhaps too late even for us to contact them in order to ask if they would be willing to come in place of whoever has not been able to. This is why we are not able to return deposits; there are simply too many fixed costs for this to be feasible. Under particularly exceptional circumstances responsible for inability to attend, though, and providing our principal costs were more or less covered, it may just be possible for us to be able occasionally to offer to offset a deposit made in one year against cost of participation by the helper in a following year, though we cannot guarantee to do so.

A few years ago we reserved places for some people who had not sent deposits whom we felt we could trust, but who for medical or other understandable reasons found themselves unable to attend, when it was too late for us to contact other people who might well have liked to have taken their places and paid the due amount. As a result we were struggling financially to make ends meet. So we had to take the hard decision **NOT**, from then on, to hold any place if the deposit for it has not been received by May 31st; nor can deposits be returned, as by then it is getting too late to find replacements for you – even if they are willing to come, flights may be fully booked already in May (let alone June), because July and August are the summer “high season” and Murcia’s beaches and golf-courses attract dense international tourist traffic. It might therefore be useful to take out insurance against inability to attend; then, in the event of having to make a claim to your insurance company, a statement from us indicating the deposit received and its purpose would be sent *directly to your insurance company* provided you send us the reference number to your claim and your company’s (or its official agent’s) address.

Currency fluctuations can cause problems. In order to minimize these we insist that payments must be made always in € euros, including payment of outstanding balances of your contributions on arrival. We have a Spanish bank account thanks to the creation of our new association MUPANTQUAT into which deposits should be paid in euros by international bank transfer. If you decide that you wish to take part you will be sent details by ordinary postal airmail (because we think it is unsafe to send bank details over internet, whatever some people may say to the contrary).

We do not have credit card facilities. Quite often credit cards issued in countries outside Spain fail to work in Spanish automatic cash machines or automatic teller (ATMs). You must insist at your local bank branch that it validates your cards so that they can work in other countries. Alas, even when the cards have allegedly undergone electronic modification by your home bank to enable them to work outside your own country, they may not work. (I once found my validated Spanish credit card failed to work in neighbouring France!) That is why you should bring at least 100€ in euro bank-notes to guard against having your having no cash here if your card gets swallowed up by an ATM machine that claims it to be invalid and retains it because it thinks it might have been stolen or be a fake. This was to my advantage when my credit card was stolen and thieves tried using it at an ATM machine 100 km away; I had alerted my bank and police, so when they tried using it at an ATM the card was retained within the machine, the bank alarm went off, and the police soon rounded up the thieves!

We cannot accept either bank cheques or travellers’ cheques (not even American Express cheques) because in the past few years tight EU banking regulations demand that nowadays they can only be cleared by banks in EU Member States if intrusive personal details are provided of people who have signed cheques and sent them (such as full names, addresses, ID, and 20-digit international personal bank account information), and travellers’ cheques can no longer be cashed at Spanish banks which will only clear them if they are paid into a named bank account at the branch in question when they are treated for tax purposes in Spain as personal earned income by the holder of that account, so nobody is prepared to receive such money from you!

By no means all countries of the European Union use the euro €, but nevertheless there is a common flat-rate fee for currency conversion within the EU, and there are never any problems. For unfathomable reasons, even though daily newspapers world-wide offer exchange rates, and worldwide currency conversion is available at the click of a mouse, US and Canadian banks seem utterly clueless, and their witless bank clerks often allege to clients that they cannot frontload a debit from an account in order to make a currency purchase of euros by adding the corresponding charge for currency conversion to that debit. This is utter rubbish. The truth is that they either cannot be bothered to find out how to do it, or have been instructed from above not to do it because it allegedly takes up too much of the company’s time. Don’t take no for an answer! Remember, the customer is always right! *You can always use the nuclear option of threatening to take your account to another bank!* (Curiously, Australian banks rarely give problems of this kind, unlike North American banks.) However, be warned that if the deposit in euros received by us is less than the amount in euros required for the deposit, because your bank has failed to frontload a debit from your account with currency-conversion/transfer costs, then a surcharge of 25€ will be added to the balance outstanding for your contribution payable on arrival, so it is very much to your advantage to hassle the clerks at the branch where you bank back home before you travel!

INSURANCE

All participants must arrange their own health and personal accident insurance cover before leaving home. EU residents should bring the EU form from their country that entitles them to public health care in other EU Member States. For reasons already given above, you should take out holiday-travel insurance, especially against unforeseen needs to cancel your arrangements.

WHERE YOUR MONEY GOES TO

Accommodation and food are included in the overall charge, as is instruction and local transportation by us, including group excursions. A major field project has a number of fixed costs that must be met. One such cost is in maintaining part-time staff. Our basic staff largely consists of about half-a-dozen local undergraduate and graduate students who help in the study of the excavated material throughout the year in my research laboratory at Murcia University. In the field, they help with giving basic instruction, and one or two even bring a private vehicle to give us greater transportational flexibility. Several staffers have long experience of our field techniques, some of which require special technical skills. Most have neither regular income nor undergraduate or postgraduate student grants. In return for their services, paying for their board and lodging is one of our fixed costs in the field, therefore, and one or two of the most experienced graduates receive a small emolument. Another fixed cost, of course, is the wages of our professional cooks and cleaning staff - wages that are the same whether we be fifteen or thirty at table! Yet another set of irreducible costs is the maintenance of vehicles and maintenance or acquisition of field equipment, and sometimes its replacement after seasons of wear and tear.

WHY DEPOSITS ARE NON-REFUNDABLE

Our annual summer field school and excavations rely heavily on self-funding. As just stated, a major field project has a number of fixed costs that must be met; indeed, one such cost is in maintaining a skeleton staff on hand to conduct the basic physical work of excavation in the event of a short-fall in participants.

If intending short-listed helpers who have paid their deposit are unable to come at the last minute, it will very probably be far too late even for airline tickets to be obtained at all by any other possible helpers who had been relegated to a waiting-list, and perhaps too late even for us to contact them in order to ask if they would be willing to come in place of whoever has not been able to.

This is why we are not able to return deposits; there are simply too many fixed costs for this to be feasible. Under particularly exceptional circumstances responsible for inability to attend, though, and providing our principal costs were more or less covered, it may just be possible for us to be able occasionally to offer to offset a deposit made in one year against cost of participation by the helper in a following year, though we cannot guarantee to do so.

OTHER SOURCES OF INCOME

Self-funding is necessary for our summer field school and excavations to take place every year. Why?

Well, in the first place, Murcia University does not make money available to us for research, because, like most Spanish universities, it receives public funds that are ear-marked exclusively for teaching purposes. Some financial assistance for research is occasionally forthcoming from Spain's national Ministry of Education and Science, for which research groups have to compete at national or regional level, and sometimes help comes from the private sector or individuals.

In universities, research would come to a standstill were it not for the enthusiasm and self-sacrifice of unemployed young graduates, as there are very, very few grants for graduate or undergraduate students to help them live from day to day. It goes without saying that staffing at universities is quite inadequate for their research endeavour (technical back-up staff is utterly inadequate), and this is because staffing is determined by what Education regards as necessary to instruct undergraduates, whereas Science and Technology will not usually pay for research staff at universities, only at scientific research institutes. The official unemployment rate in Spain is around 9.5% but many "employed" people are on contracts that may only last for six weeks or so at a time, throughout the entire Spanish economy.

Even when official research grants are awarded to university research groups, there are several strings attached, as we have found after having had some. First of all, unemployed graduate students are debarred from receiving any support from them, because official grants can only be spent (with obligatory detailed accounting) by salaried employees at public institutions. Secondly, in order to acquire such a grant, usually at least four or five such employees must propose a project, but the flip-side is that any grant awarded will be divided up in equal proportions between them, rather assigned to the overall needs of the project; this means that those who are actively involved in the project, rather than those "sleepers" whose signatures were needed to put up the proposal, get a lower proportion of money to spend on the project than the project itself needs in order to come to fruition. Thirdly, there are severe limits imposed by the Spanish bureaucracy on the proportion of the overall grant that may be assigned to living expenses or travelling expenses, because the bureaucrats want to see receipts for material purchases that give "added value" to the stock-inventory of the university department that is officially in receipt of the grant, because they hold that the main purpose of official grants is, first and foremost, to upgrade the physical infrastructure required for a department's research.

Those three sets of problems lead to major short-falls for field research, which is labour-intensive rather than needing expensive laboratory equipment, and involves maintenance and travelling costs of many people. This is why field research projects rely on support from individual helpers.

Alas, we had no public grant for 2008 whatsoever and although we received one in 2009 there was no public money available in 2010, 2011, 2012 and 2013 owing to the severe economic crisis here in Spain and there will be none in 2014. Just to let you know what official support has been received in the past, here are some brief details. The real grants received are 87.5% of the amounts shown below because Murcia University administrators retain 12.5% (one-eighth) of each grant for putative "administrative overheads". In November 2002, the Spanish Government's Ministry of Science and Technology announced the award to me and 6 institutional colleagues to continue work at *Sima de las Palomas* and *Cueva Negra* of Major Research Grant BOS2002-02375 of 50,000 euros for the triennium 2003/2004/2005. In October 2005 it made available a small grant for 2006 of 6,000 euros (CGL2005-02410/BTE). Most of this money had to be spent on infrastructure at the university departments to which the official signatories of the project belong, as they are mainly university lecturers or professors or public service researchers, who spend little time with us in the field, alas. Nevertheless, this was an extremely gratifying recognition of our research endeavour over the years. It was the third such governmental award we received. At

the end of 1999, the Spanish Government announced the award of *Major Research Grant PB98-0405* to us for the triennium 2000/2001/2002, though unfortunately the total sum of money awarded was a mere 24,000 euros altogether (barely \$9,000 a year). The first such award we received for our project was for the 3-year period 1994/1995/1996. The *Murcian Regional Government* has also made small grants for 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003 and 2004. These annual grants have ranged from 3,000 to 10,000 euros. In September 2007 we were extremely lucky to obtain a 30,000-euro grant from the *Regional Government* which allowed us to buy much new equipment for our 2008 field season, including -for site-surveying- an expensive *TopCon* "Total Station" and a portable computer for its use, new platforms and scaffolding for the tower in Sima de las Palomas, many new books and monographs, etc.; all the money had to be spent by mid-December 2007. In 2009 we received a grant of about 25,000 euros and once again all of the money had to be spent by the end of the year; unfortunately the scaffolding tower required further considerable expense in order to bring it into line with updated safety requirements, and we also had to acquire a new water pump and another safe for guarding the Neanderthal remains, whilst dating at overseas centres also involved further expense.

From 1995 to 2001 volunteers who belong to *The Earthwatch Institute* helped in our field research. Their help and support was greatly appreciated, though it has to be said that the experience for each of them was more expensive than the charges we are making now - this was because the *Institute* was charging each one around eighteen-hundred dollars per 14 days per person, of which our project received less than one thousand, the rest going to the *Institute's* overheads. By cutting out the intermediary and extending to 21 days each of our sessions, we are able to offer you a far better deal. (I seem to recall that the organization also insisted on receiving non-returnable deposits from intending volunteers.)

(The *Spanish Government* and *British Council* have also paid for joint *Anglo-Spanish exchanges* of scientists in 1993-4 and 1996-7 in connexion with the project; these were principally with *Oxford University*. Much scientific research is paid for by arrangements with other institutions. Thus, as mentioned earlier, a U.K. Government *NERC* grant to Oxford's *Research Laboratory for Archaeology and the History of Art* has supported some dating at Cueva Negra, whilst other dating there has been done at the Laboratory's own expense. Other institutions have also done specialized work for us for free, though a list of these would be boring here.)

LOOKING AFTER YOU

ACCOMODATION

Cueva Negra helpers will be accomodated throughout in *Caravaca de la Cruz* at the "*Colegio Público "Asacruz" de Educación Especial*" (Residential Public School "Asacruz" for Disabled Children). The children are away on holiday when we use the school. There are hot and cold showers and conventional sanitation, in separate men's and women's facilities. Meals are provided in a dining room. There is a common room and also a large well-lit workshop where we wash and sort our finds. There are bunks in separate men's and women's dormitories. A separate room may be made available for a couple, depending on how many people we are altogether and how many dormitories we need. You need only bring towel, sheets and pillowslip. You must bring soap or shower-gel and shampoo. Our cooks-cum-housekeepers take men's dirty clothes one day alternating with women's clothes another day, for washing separately in the large industrial washing-machine at the school, which can only work with full loads; once washed, the clothes are hung out on the washing-line to dry, before being ready for you again. There is an iron if you want to use one. All of us have to make our own beds and help keep dormitories tidy, and keep toilets clean by using the lavatory brushes. A professional cleaning staff sweeps and mops the floors and bathrooms.

Sima de las Palomas helpers will be accomodated throughout in the village of Dolores de Pacheco, where we take three meals a day at the at the restaurant of the "*Centro Cívico*" (Civic Centre) which has its own cooks. 400 metres away, we sleep in bunks in separate men's and women's dormitories, converted temporarily for us from class-rooms in the roomy village school which has showers with hot and cold water. We use large class-rooms for washing and sorting finds. A separate room may be made available for a couple should this be requested in advance. We use the village swimming pool and its shower block with hot and cold showers, which is half-way between the Civic Centre and the school. You need bring only towel, sheets and pillowslip. You must bring soap or shower-gel and shampoo. We collect men's dirty clothes one day, alternating with women's clothes another day, for washing separately in a large industrial washing-machine and drier at a nearby establishment, which can only work with full loads. All of us have to make our own beds and help keep dormitories tidy, and keep toilets clean by using the lavatory brushes. A professional cleaning staff sweeps and mops the floors and bathrooms.

FOOD

All meals you take are included in the charge. This way we pay for the food and cooks whose responsibility it is to organize the catering in accordance with their experience and skills. The standard of catering is high. The Spanish cooks at both the *Caravaca "Asacruz"* Residential School and the *Dolores de Pacheco Civic Centre* are of the highest calibre.

We CANNOT offer either "Vegan" menus or kosher or halal cooking. Helpers may **NOT** use the kitchens to cook for themselves. Special diets **CANNOT** be provided, **and that goes for vegetarians too**, although those non-rigid vegetarians who eat fish, shell-fish, milk, cheese, yoghurt, and eggs, or who have no objection to sauces or soups based on strained meat or chicken broths, will find they will easily get enough to eat if they simply avoid eating pieces of actual meat; eggs or cheese can readily be supplied for them if they feel hungry -- **"Vegans" and all others who adhere rigid to particular dietary restrictions CANNOT BE CATERED FOR.**

Murcian lunches and dinners are invariably accompanied by communal platters of mixed salad, and there is no shortage of fresh fruit. Because our word "salad" simply means "salted", and salted is the meaning of the Spanish word "ensalada", it is no surprise that in Spain the platters are obviously served prepared with salt, olive-oil and vinegar or lemon-juice, and everyone digs in with his/her fork into the comunal platters (it is considered the height of bad manners in Spain to remove some of it onto your own plate). Lettuce with tomato cannot by itself be a "salad" without violating the meaning of the word! Diabetics, or people who require low fat or low sodium diets will have to juggle with these options for themselves, bearing in mind that vegetable oil (olive oil) is used far more in Mediterranean cooking than unhealthy animal fats. **Special diets CANNOT be offered, however.**

It should be remembered that meals are of typical Spanish food, and eaten at typical Spanish hours which are much later than those in northern Europe or North America. Breakfasts are light and taken early: coffee, bread rolls or toast, cereals, fruit juice. A mid-morning sandwich is taken to the site together with appropriate cold water. Luncheon is usually after 15.15 hours and is a copious cooked meal. Dinner is no earlier than 21.00 hours and is another copious cooked meal. Wine, beer, soft drinks, and water are provided with lunch and dinner. Tap water is safe to drink, but bottled water is also available. We all usually sit down at table as one man to main meals which are an opportunity for chitchat and relaxing.

Spanish cooking contains two ingredients that are not to everybody's taste, but which simply cannot be eliminated, namely, olive oil and garlic. For people who have no problems with those, the meals are delicious and very filling. Typical dishes range from delicious barbecued yearling lamb chops, pork chops, steak, fried chicken, fish, stews based on potatoes, chickpeas, lentils or beans, stir-fried vegetable dishes, and rice dishes based either on chicken and rabbit or on chicken and shellfish.

Soups, hors d'oeuvres, pastas, and omelettes - especially the potato and onion omelette known as "tortilla española" - are often served as first courses at lunch. A local Murcian speciality is a meat pie baked in mouth-watering flaked pastry ("pastel de carne").

Murcia is renowned in southern Spain for its gastronomy. It has a staggeringly wide range of taverns and restaurants for eating out. You can either eat out on the basis of drinks and *tapas* (snacks) or you can have slap-up sit-down meals. Depending on the venue, you can reckon on paying anywhere from €4 euros to €40 euros. Often the cheapest places offer food and wine every bit as good as the most expensive. That is where our Spanish project volunteers and senior site helpers - especially our students - can assist other helpers, especially those from other countries, because they go to places which are within their modest means! Our excursions often take in typical bars and eating places, allowing us to sample local food and wine.

Although olive oil and garlic are fundamental ingredients of Murcian cooking, it is not heavily spiced by and large, although some dishes traditionally contain cloves, chili peppers, or other spices. Usually, however, hot peppers are offered on small dishes, together with olives, for people who wish to accompany their meals with those.

People from northern Europe or North America often feel that Spanish cooking has much stronger flavours than they are used to at home. It is a very healthy low cholesterol and high fibre diet -- which in itself is enough to make your bowels looser than you might be accustomed to. These aspects, together with hard work in great heat, can sometimes make people feel queasy and uncomfortable - not just foreigners, because Spaniards, too, get funny tummy troubles in summer. The solution is to come armed with a standby of a kilogram of your favourite, high-calorie, concentrated nibbles, and to drink still fruit juice rather than fizzy drinks or cheap Spanish spirits. By contrast, most proprietary pharmaceutical preparations (such as "Enterovioform" pills) are of questionable pharmacological worth. If you need medication, I will make sure you take something which is medically appropriate; I am a British medical graduate and for many years was a medical practitioner in the Australian state of New South Wales.

PHYSICAL CONDITIONING/MEDICAL ADVICE

Although no great physical fitness is necessary, the project is not suitable for severely physically or mentally disabled, lame, deaf, or poor-sighted people, nor for people who are very overweight, suffer from advanced degenerative joint disease, or from haemophilia, cardiovascular or heart ailments, or suffer great discomfort or extreme sunburn in hot weather. There are daily uphill walks of about 15 minutes up to the sites from where our vehicles have to stop. This may have to be repeated during the morning in order to carry out service tasks.

Physical demands on you may involve any or all of the following: walking and scrambling, kneeling and scraping, digging with mattock or pick, bending and sieving, pushing wheelbarrows, carrying loads, sitting. None of these is likely to last for longer than a couple of hours at a stretch on any one day, since you can be switched from one task to another if you feel uncomfortable. Probably the heaviest tasks involve heavy digging and carrying 10 kilogram bags of soil downhill at *Sima de las Palomas* where the heat of the sun is very severe.

It is *ESSENTIAL* that you inform me of any health problems before you come so that they can be taken account of fully.

For the walk up to *Cueva Negra*, you only really need stout shoes or joggers, although walking boots are useful for field excursions and walking off the footpaths; once inside *Cueva Negra*, however, you must bring footwear to change into which has no pattern on the sole, such as flat-soled sneakers, plimsolls, pumps, slippers or sandals, because otherwise hideous footprints are left behind in the soil which spoil our photographic records. At *Sima de las Palomas* conditions are very different, and firm boots with a heel should be worn at all times, both because of the rocky nature of the hillslope and the demands of working on scaffolding.

When we are wet-sieving, the Project has several pairs of rubber boots available for those people who, like me, don't like getting their other footwear soaked and muddy. In fact, wearing muddy footwear is forbidden inside *Cueva Negra*, because wet mud and damp footprints show up starkly against the dry soil and spoil the photographs.

Shorts, sunhats and gardening or work gloves are appropriate wear, along with sunglasses and your preferred suntan lotions or creams. There will be opportunities for swimming also, so remember to pack swimming togs.

As a British medical graduate and registered medical practitioner in New South Wales (Australia), I strongly recommend all intending volunteers to ensure their anti-tetanus vaccination is upto date, and that, if they are asthmatic, diabetic, or suffer from allergic disorders, they bring with them their customary medications. Those with back or knee problems should bring with them appropriate corsets, girdles or elastic athletic supports.

People who suffer from vertigo in high places, or from claustrophobia in enclosed ones, are recommended to come to *Cueva Negra* in preference to *Sima de las Palomas* though even at *Sima de las Palomas* they can be given tasks on the hillside which avoid exposing them to conditions that otherwise might precipitate attacks inside the shaft or on the scaffolding tower.

There are efficient public hospitals both at Caravaca (Hospital del Noroeste) and not far from Dolores de Pacheco (Hospital de Los Arcos at Santiago de la Ribera), in each case about 15 minutes drive from our sites. The city of Murcia has 3 large public hospitals, about an hour's drive from our sites. If a medical emergency arises it should usually be possible to deal with it efficiently.

Helpers should find out whether their home country has reciprocal health agreements for automatic free treatment at Spanish public hospitals. Most European Union countries do, **but you nevertheless have to fill out a form before you leave your home E.U. Member State which allows you to be given the card you must bring here entitling you to public treatment in other EU countries on the same basis as their own nationals.** If your home country is outside the EU and therefore has no reciprocal arrangement with it, then Spanish public hospitals will demand accounts to be settled on discharge by patients, who may then present the official receipts afterwards to their own health insurance companies for possible reimbursement on their return home. Be sure to find out *precisely how* your private health insurance company requires receipts you present to be made out by the purveyor of services involving your hospital, medical, dental or pharmaceutical expenditure, lest it reject them when you return home.

Helpers who prefer private health treatment in Spain will usually have to pay immediately in cash for treatment, and present the official receipts afterwards to their own health insurance companies for possible reimbursement on their return home. There are, however, some private hospitals and doctors who work with private health insurance schemes which have reciprocal arrangements with those in some other countries (thus, British BUPA members could ask in Britain if there are reciprocal arrangements with BUPA's affiliated company in Spain).

The Project is not responsible for paying hospital, medical, dental or pharmaceutical bills of helpers. Before you come, you should have made your own arrangements for health, injury or disability insurance in connexion with illness or accidents which might be sustained during your participation in the Field School.

Health conditions around the world are constantly changing, so we recommend that you consult your local public health department or, in the United States, the Centers for Disease Control in Atlanta at (404) 639-2572 for the latest health information for travellers.

FIELD COMMUNICATIONS, PHONE, INTERNET

Internet access is available at both our field bases though it can be erratic for reasons beyond our control; nevertheless, we usually get buy! Our field bases usually have cell phone cover though Dolores de Pacheco is in a coastal holiday area where there is often saturation of the phone system in July and August which sometimes means that telephone calls from elsewhere do not always get through. At our excavation sites, however, there is usually neither internet cover nor reliable cell phone cover.

You can be reached by mail. It is advisable for letters to be REGISTERED and marked AIRMAIL and URGENT in order to ensure fast delivery, which may still mean up to 5 consecutive working days from the U.K. to Spain, or more from outside Europe.

Addresses and phone numbers of our accommodation bases are given below. Please advise friends and relatives to make phone calls only between 15.00 and 24.00 hours Central European Time (if in doubt about the time in Europe, check with the international operator):

July 1st – July 22nd, 2014: Cueva Negra

Colegio Público "Asacruz" de Educación Especial

Camino Mayrena 13 (El Copo)

30400 CARAVACA DE LA CRUZ

Murcia

Spain

Telephone: from outside Spain dial 34-968-700844, -708151, within Spain 34-968-700844, -708151

July 22nd - August 12th, 2014: Sima de las Palomas

Centro Cívico

DOLORES DE PACHECO

Murcia

Spain

Telephone: from outside Spain dial 34-968-173020 or 34-685-111111, within Spain 968-173020 or 685-111111

FIELD SUPPLIES

You **must bring** sheets, pillowslip and towel, as well as soap and shower gel and shampoo. The warm nights mean you do not need blankets or insulated sleeping-bags. Sheet sleeping-bags (Youth Hostel type or similar) are fine, however. Recommended clothes are shorts, sunhat, sunglasses, and work or gardening gloves. Swimming togs can be used at the pool, especially at Dolores de Pacheco. Firm boots are useful for field excursions and essential for fieldwork at *Sima de las Palomas*. Inside *Cueva Negra*, it is essential to wear flat-soled footwear which has no pattern on the sole whatsoever, such as flat-soled sneakers, plimsolls, pumps, slippers or sandals. I recommend volunteers to bring a small haversack to carry their personal daily bits and pieces to the site. Your clothes can be brought out in a backpack, grip, or suitcase.

Lost luggage is a recurrent problem for travellers, whether taking short domestic flights or journeys around the globe. We recommend that you take a carry-on bag with a set of field clothes - and shoes - plus any personal essentials so that you will not be uncomfortable or incapacitated if your baggage takes several days to catch up with you.

READING SUGGESTIONS

NON-FICTION

Here are some reader-friendly, well-illustrated, easy-to-handle general books by reputable scientists that I like:

The Complete World of Human Evolution by Chris Stringer and Peter Andrews (2005, London, Thames and Hudson; this probably has a different US publisher, and there is also a Spanish edition published by Akal) (Chris is professor at London University's Imperial College and director of Palaeontology at the London Natural History Museum);

The First Humans edited by G.Burenhult (1993, University of Queensland Press - there is a different US publisher of the United Nations-sponsored series to which this volume belongs, but I don't know who it is).

Absolute novices who feel human evolution might be a daunting subject to tackle, especially middle-aged readers approaching it for the first time in their life, might do worse than thumb through the brief *Early Man* by Paul Jordan (1999, Sutton Pocket Histories) before reading anything else.

I always recommend my undergraduates to get back to basics, and read the brief and well-illustrated

The Old Stone Age by the late François Bordes (1968, London, Weidenfeld & Nicolson) and also

The Palaeolithic Age by the late John Wymer (1982, London, Croom-Helm), both of which should be in university or museum libraries and possibly in major public libraries.

Two magnificently illustrated coffee-table books certainly should not be missed are:

The Last Neanderthal by Ian Tattersall (1995, New York, Macmillan) and

From Lucy to Language by Don Johanson (1996, New York, Simon and Schuster).

Alas, no books deal well with Early and Middle Pleistocene human evolution in Europe before the Neanderthals. Usually it is relegated to a short section in books that give a worldwide account of human evolution, and among the better ones is *Reconstructing Human Origins: A Modern Synthesis* by Glenn C.Conroy (1998, New York, W.W.Norton, 1998). Whereas I prefer to take up an intermediate stance, a problem common to most books is that they tend to favour extreme one-size-fits-all theoretical explanations, either appealing, on the one hand, to "multiregional" Pleistocene human evolution in the case of the weighty *Palaeoanthropology* by Michigan University professor Milford H.Wolpoff (1999, New York, McGraw-Hill), or, on the other, to dogmatically "cladogenetical" Pleistocene human evolution in the cases of *The Human Career, Human Biological and Cultural Origins* by Stanford University professor Richard Klein (London and Chicago, Chicago University Press; a redeeming feature here is the combination of human skeletal evolution with Palaeolithic archaeology, though I prefer the 1st edition of 1989 over the 2nd edition of 1999 that became more relentlessly cladistical) and of *The Origin of Modern Humans* by journalist Roger Lewin (1993, New York, Scientific American Library) and *Principles of human evolution* also by Roger Lewin (1998, Oxford, Blackwell Science). I like the thoughtful *Timewalkers: The Prehistory of Global Colonization* by Southampton University professor Clive Gamble (1993, Stroud, Alan Sutton) which takes an interesting approach to biology, though it is short on drawings and illustrations. A quite short but most authoritative book is *The Evolution of Homo erectus: Comparative Anatomical Studies of an Extinct Species* by SUNY Binghamton professor G.Philip Rightmire (1990, Cambridge University Press).

First-year undergraduate textbooks on physical anthropology for beginners are, alas, far too general and far, far too cursory with regard to human evolution in Eurasia between 1,500,000 and 15,000 years ago, though among better textbooks for beginners are:

Exploring Biological Anthropology: The Essentials by Craig Stanford, John S.Allen and Susan C.Antón (2009, Upper Saddle River, New Jersey, Pearson Prentice-Hall)

How Humans Evolved by Robert Boyd and Joan B. Silk (2010, New York, W.W. Norton)

Introduction to Physical Anthropology by Robert Jurmain, Lynn Kilgore, Wenda Trevathan and Russell L.Ciochon (2013-2014, Wadsworth Publishing, "Cengage Learning")

Here are some other quite short books that could interest you:

Catching Fire: How Cooking Made Us Human by Richard Wrangham (2009, London,Profile; New York, Bantam)

The Palaeolithic Origins of Human Burial by Paul Pettitt (2010, London, Routledge)

A Brain for All Seasons: Homo erectus and Abrupt Climate Change by William H.Calvin (2002, London and Chicago, University of Chicago Press)

Genetics and the Search for Modern Human Origins by John Relethford (2001, Chichester and New York, Wiley-Liss)

There are several books that home in on Neanderthal folk and here are some easy reads by reputable authors:

In Search of the Neanderthals by Chris Stringer and Clive Gamble (1993, London, Thames and Hudson)

Neanderthal Man by Myra Shackley (1980, London, Duckworth)

Wild Men: Yeti, Sasquatch and the Neanderthal Enigma by Myra Shackley (1983, London,Thames & Hudson)

The Humans Who Went Extinct. Why Neanderthals Died Out and We Survived by Clive Finlayson (2009, Oxford University Press)

How To Think Like A Neanderthal by Thomas Wynn and Frederick Coolidge (2012, Oxford University Press)

Neanderthal by Paul Jordan (1999 and 2001, Stroud, Alan Sutton),

The Neanderthal Enigma by James Shreeve (1995, New York, William Morrow)

Slightly more challenging but quite short are:

The Rise of Homo sapiens: The Evolution of Modern Thinking by Frederick Coolidge and Thomas Wynn (2009, Chichester and New York, John Wiley)

Cognitive Archaeology and Human Evolution, edited by Sophie Archambault de Beaune, Frederick Coolidge and Thomas Wynn (2009 Cambridge University Press)

Somewhat longer and in my opinion rather dated is:

Human Evolution, Language and Mind, A Psychological and Archaeological Inquiry by William Noble and Iain Davidson (1996, Cambridge University Press)

Longer still, but well worth the effort of reading, is

The Evolution of the Human Head by Harvard University professor Daniel E. Lieberman (2011 The Belknap Press of Harvard University Press).

The past twenty years have seen some excellent new books for specialist students majoring in Prehistoric Archaeology, Human Palaeontology and Physical Anthropology, and for graduates in the subjects. A useful short picture book with explanatory text is Handbook of Palaeolithic Typology Vol. 1 Lower and Middle Palaeolithic of Europe by André Debenath and Harold L. Dibble (1994, Philadelphia, University of Pennsylvania University Museum). Most important is the authoritative The Neanderthal Legacy by Cambridge's Professor Sir Paul Mellars (1996, Princeton, Princeton University Press). The Palaeolithic Societies of Europe by Clive Gamble (1999, Cambridge University Press) is interesting but somewhat heavy going - it presumes readers already have a reasonable grasp of European Palaeolithic archaeology and typology and makes few concessions to those who lack them. Advanced students will find some articles relevant to SE Spanish Early Pleistocene archaeology in The Cutting Edge: New Approaches to the Archaeology of Human Origins, edited by Kathy Schick and Nicholas Toth (2009, Gosport IN, The Stone Age Institute, and Bloomington IN, Indiana University, The Stone Age Institute Press, Stone Age Institute Publication Series Number 3).

The past twenty years have witnessed a flood of edited volumes, particularly about Neanderthals and how anatomically modern humans after about 45,000 years ago in Europe are to be regarded in relation to them by physical anthropologists and Palaeolithic archaeologists. I have most of these books in my private library, but it would be invidious to mention just one or two of them, particularly because our Field School excavations do not deal with times later than about 45,000 years ago nor with anatomically modern humans, let alone Upper Palaeolithic archaeological artifacts. All the same, there are a couple of books you might be interested in looking at, namely, The Nature of Paleolithic Art by R. Dale Guthrie (2005, Chicago and London, University of Chicago Press), and Rock Art of the Spanish Levant by Antonio Beltrán (1982, Cambridge University Press) – a Session 1 excursion will visit some sites shown in Beltrán's book.

FICTION

Very distinguished writers have written about Neanderthals in fictional form. Among them are H.G. Wells (of *War of the Worlds* and *Time Machine* fame) whose 1921 short story "*The Grisly Folk*" can be found in any good public library, republished in his *Selected Short Stories* (Harmondsworth, Penguin Books, 1958). You should also be able to find there William Golding's novel *The Inheritors* (London, Faber & Faber, 1955) - Golding won a Nobel Prize for Literature and his most famous novel is *Lord of the Flies* (about schoolboys on a desert island). The eminent Quaternary palaeontologist Björn Kurtén also tried his hand at an excellent novel called *The Dance of the Tiger* (1980) which you may be lucky enough to find it in the library. Isaac Asimov also had a go, with his short story "*The Ugly Little Boy*" which you can find in his book *The Best Fiction of Isaac Asimov* (1958, London, Grafton) and your library most likely has it too. Other well-known novels include J.H. Rosny-Ainé's *The Quest for Fire* (1982, Harmondsworth, Penguin - originally published way back in 1911 in French) - which also was made into an excellent film that your local video shop no doubt can get you - and Jean Auel's *The Clan of the Cave Bear* (1980, Toronto & New York, Bantam Books) which was also made into a (not so good) film; Jean Auel subsequently published another novel, *The Mammoth Hunters*. Finally, there is the Spielberg film of John Darton's novel *Neanderthal* (1996, London: Hutchinson and New York, Random House) about which the less said the better!

NEANDERTHAL VIDEOS

Research at our two sites has stimulated public interest, reflected in several documentary films, which include "Decoding Neandertals" shown by PBS-Nova in USA and elsewhere on January 13 2013, produced by the London-based company Arrow Productions (<http://www.youtube.com/watch?v=3nH1fqd0Ryo>; http://www.youtube.com/watch?v=R00ZT_1JU1g; <http://video.pbs.org/video/2323758207>); "Neandertaler – Warum haben wir ihn überlebt?" shown in Germany on 24 and 25 May 2012, and (dubbed) in France, and elsewhere, on the European Arte television channel, produced by the Berlin-based company X-enius AVE Gesellschaft (<http://videos.arte.tv/de/videos/x-enius-7367218.html>; mirror.dokujunkies.org/?r=8281&download=Neandertaler.-.Warum.Haben.Wir.Ihn.überlebt%.F.GERMAN.DOKU.WS.dTV.SAMPLEFIX.XViD-GEO) Mirrorjunkies is pay-to-view; the last three letters refer to whoever has uploaded the video, and I have chosen GEO though there are many alternative uploaders. "Arqueomanía: Dossieres sobre Evolución Humana" (especially in parts 1 and 4 of this 4-part series shown on October 6, 11, 20, 27 2013 by TVE (Spanish national television), produced by former government minister Manuel Pimentel's Arqueomanía production company; also in documentary made by the same company "*El Paso del Estrecho de Gibraltar*" show by TVE on July 28 2013; "Lo que nos une a los neandertales" shown on TVE (Spanish national television) produced by the Barcelona team of channel "Tres14", June 4, 2011 (<http://www.rtve.es/television/20110921/une-neandertales/463099.shtml>); "Cueva Negra", an animated educational documentary that gained an award at the Spanish festival of short films at Málaga in 2013, produced by the Murcian regional government's Fundación Integra, with various public showing in the Murcian region in 2012 and 2013 (we have a copy that will be shown during Session 1 at Cueva Negra); "Piedra sobre piedra", shown on ten occasions via Hispasat (the Spanish government TVE satellite television service to Latin America), made in 2004 by the Madrid production company Cuarto Creciente (www.cuartocreciente.es/piedra-sobre-piedra) "Neanderthal" is a full-length video and not too appalling – I bought a copy in the UK in February 2001 for thirteen pounds 99 pence at an "HMV" high-street store in London. It was made by the Visual Corporation Ltd in 2000 for television broadcasting in 2001 in the UK via Wall-To-Wall Television Ltd. If the video is still available, you may be able to find out more at <http://itel.co.uk/neanderthal>

YOUR FIELD SCHOOL DIRECTOR, AS SEEN BY HIMSELF

Michael Walker and his curriculum vitae

MY WORK

I was appointed Professor of Physical Anthropology since 1988 at Murcia University, Spain, where I set up the Sub-Department of Physical Anthropology ("Área de Conocimiento de Antropología Física") in the Department of Zoology and Physical Anthropology in the Biology Faculty. I had to teach in Spanish, which I coped with, more or less. I have taught undergraduate course units on both Biological Anthropology and in Human Evolution, as well as postgraduate courses on The Origins of Modern Humans and on Human Ecology, Today and Yesterday, and in addition I supervise graduate students undertaking research, as well as directing research at *Cueva Negra del Estrecho del Río Quípar* and *Sima de las Palomas del Cabezo Gordo*. I have been designated Emeritus Professor by Murcia University. I ceased to teach formal course units in June 2013 and now my time is taken up with research, the Murcia University research group on "Quaternary Palaeoecology, Palaeoanthropology and Technology" and the Murcian Association for the Study of Palaeoanthropology and the Quaternary (MUPANTQUAT)

MY LIFE

I was born at Colchester in England in 1941. This was appropriate for an archaeologist, because, even before Julius Caesar reached England, Colchester was the capital of the prehistoric Celtic King Cunobelinus, or Cymbeline as Shakespeare called him, though English children know him even better from the nursery rhyme as "Old Kind Cole was a Merry Old Soul...". King Cunobelinus was almost alone among prehistoric British rulers in being important enough to mint his own coins. A century later, in A.D. 40 the Roman Emperor Caesar Augustus set up the first capital of his new British colony at Colchester, or Camulodunum as it was known in Latin. However, the Celtic Queen Boudicca (or Boadicea) ransacked it, and a new, safer capital was established on the River Thames at London in A.D. 61.

During World War 2, my father was away from home, being an officer in the Royal Air Force, so my mother took me away from German bombs dropping over Colchester, to her family's home in Yorkshire. After his demobilization in 1948, my father, also a Yorkshireman, came back from Germany to join us.

As a boy in Yorkshire, I studied Maths, Physics, Chemistry, Biology, Latin, Greek, French and German at the Bradford Grammar School in Yorkshire, where the great archaeologist Sir Mortimer Wheeler had studied long before me. The composer Delius had been at my school, as had the famous historian Sir Alan Bullock.

My hobbies were archaeology (I founded an Archaeological Society at the school), rowing, squash, mountaineering, spelaeology, hiking and Scouting (I was a Queen's Scout). I kept up several of them for many years afterwards - up to leaving Sydney in 1988, I was in charge of all Venture Scouts in an inner-city Scout District and also helped both on Scout-Leader training-teams and Scout spelaeology training-teams.

I went up to Oxford University to University College (the poet Shelley was expelled from it!) where I took degrees in Animal Physiology (1963) and Medicine and Surgery (1967). I was awarded Oxford University's Near Eastern Archaeological Essay Prize, its Faculty of Medicine's Ophthalmology Prize, and the British Association for the Advancement of Science's Endeavour Prize for a published physiological review of muscular contractility. I spent a while beside the Thames in London's St. Thomas' Hospital Medical School (where Florence Nightingale founded professional nursing after the Crimean War).

While I was in London, I met my future wife, María Teresa Pina Velasco, a Spaniard from Murcia who was working in Bond Street in haute couture. We were married since 1968 until my wife's sad death from cancer in 1998. I have 3 admirable grown-up sons and four grand-children. I live in a flat in Murcia and have a beach-house at La Torre de la Horadada 15 kilometres from *Sima de las Palomas*.

MY PROFESSIONAL AND RESEARCH CAREER

In 1968 I took the (first ever) "Distinction" in what was then Oxford University's Postgraduate Diploma in Prehistoric Archaeology (now grandly renamed Master of Studies in Prehistoric Archaeology), studying under the Palaeolithic expert Professor Derek Roe, who published with the late Mary Leakey the monumental 1995 volume on the Olduvai Gorge stone tools, in the Cambridge University Press *Olduvai Gorge* (vol. 5) series of monographs. I then went on to take my DPhil from Oxford for a thesis on the prehistory and physical anthropology of southeast Spain which was supervised by the eminent scholar Professor John Evans who was Director London University's prestigious Institute of Archaeology at that time (now called University College London Institute of Archaeology).

From 1967 to 1969 I was Randall Maclver Research Fellow in Archaeology at The Queen's College at Oxford University. In 1969 I became university lecturer in Human Anatomy at the Edinburgh University Medical School in Scotland. Although I liked Edinburgh and was on full tenure, but I left in 1973 and emigrated to Australia, where I was first university lecturer, again on full tenure, and later senior lecturer, in Anthropology in the Arts Faculty at Sydney University. As well as being a British citizen by birth, I am also an Australian citizen, and for many years ran a part-time general practice in Sydney, especially for Spanish-speaking patients from Spain and South America.

From Sydney, I carried out research in Indonesia and continued to do field-work in southeastern Spain with colleagues at Murcia University. Much of this field-work was financed by Australian Government Research Grants Scheme and or by the National Geographic Society of the USA. In 1986 the Spanish Government financed me as a Visiting Professor for 12 months in the Department of Anthropology and Genetics in the Science Faculty at Madrid's Autonomous University. While I was there, the Spanish Government brought in a change to the law, in order to enable foreigners to become *tenured* university teachers in Spain, which had been forbidden under General's Franco dictatorship (1939-1975). There had been foreigners before the Spanish Civil War (1936-1939). I was the *first* non-Spaniard to be given a *any permanent Full Professorial-level position* since the Civil War. By a strange quirk of history, the *last* foreigner to hold one had also been a prehistorian, namely, the Austrian scientist Hugo von Obermaier, who left Madrid University after the Spanish Civil War broke out and retired to the Catholic university at Freiburg in Switzerland until his death in 1946.

So, in 1988, I came back to Europe to set up the Sub-Department of Physical Anthropology (Área de Antropología Física) in the Biology Faculty at Murcia University, under a Spanish Government programme ("PROPIO") designed to pump new blood and ideas into collaborating universities. In 1989 I was elected a Fellow of the Society of Antiquaries of London. I returned to Oxford as its official Senior Visiting Research Fellow in Archaeology during 1993 and 1994 from time to time, when I was also Visiting Fellow at St. Cross College. I ran official scientific exchanges, sponsored by the Spanish and British Governments (*Anglo-Spanish Joint Actions HB1992-104B and HB1995-0002B*) together with Derek Roe, Oxford University's Professor of Palaeolithic Archaeology and Director of its Baden-Powell Quaternary Research Centre.

I was also Senior Researcher responsible for the 3-year Spanish Governmental DGICYT Research Project *PB92-0971* and in 1993 was the same for the 1-year Murcia Regional Government Research Project *PSH93-52*, at my two sites of *Cueva Negra* and *Sima de las Palomas*. At the end of 1999, a new Spanish Government *Major Research Grant PB98-0405* was awarded to help with the *Sima de las Palomas* and *Cueva Negra* research in the 3-year period 2000-2001-2002, and a further similar three-year grant was made, *BOS2002-02375*, for the triennium 2003-2004-2006. In 2005 it made available a small grant for 2006 (CGL2005-02410/BTE). In 2007 the Murcian Regional Government's research funding body, *Fundación Séneca*, awarded a grant of 30,000 euros for research at *Cueva Negra* and *Sima de las Palomas* (*05584/ARQ/07*); the same body awarded me 900 euros in 2006 to present a communication at the XV Congress of the International Union of Prehistoric and Protohistoric Sciences at Lisbon. In 2009 we received a grant of about 25,000 euros for archaeological research at our sites from funds released by the Murcian regional government for archaeological excavations administered by Murcia University. Alas, since 2009 no further public money has been made available for archaeology in Murcia, but our recently formed *Murcian Association for the Study of Palaeoanthropology and the Quaternary, MUPANTQUAT*, and our Field School activities are helping to keep the fieldwork going forward. .

The 1999 official recognition by *PB98-045* undoubtedly helped us to acquire new international contacts and collaboration, as well as maintaining pre-existing ones, and most particularly favoured our obtaining the royal patronage of King Juan Carlos I of Spain who graciously accepted Honorary Chairmanship for the (December 6-19, 2000) *International Colloquium and Workshop "The Iberian Peninsula and Human Evolution"*, *A Symposium in Honour of Professor Phillip V. Tobias, F.R.S.* which I organized at Murcia. The late Professor Tobias, who was 75 in 2000, flew to Murcia from South Africa where he was Emeritus Professor of the Witwatersrand University at Johannesburg and directed its Palaeoanthropology Research Group. We had known each other since 1974 and he stayed at my house and visited our Murcian sites.

I directed the scientific content of a travelling European Union-cofunded public exhibition about our sites and research at them, called "**Archaic Europeans and Neanderthals: Project HOMO, Hominins, Technology and Environment in the Middle and early Upper Pleistocene**", which was about our work at *Cueva Negra* and *Sima de las Palomas*, and travelled around the European Union, because it was winner of the European Commission's "Culture 2000" Programme (2000-0820CLTCA1A) so that the Commission paid for half (€150,000 euros) of its cost, the other half coming from the participating institutions that have agreed to display it, namely Murcia's Museo de la Ciencia y del Agua (Science and Water Resources Museum), the Austrian national Museum of Natural History at Vienna (where the exhibition opened in October 2001), the Palaeontological Museum of Barcelona at Sabadell, the Oxford University Museum of Natural History, Logroño Museum, San Sebastián's Science Museum, and other places in Spain.

In February 2000, the Rector (i.e. President or Vice-Chancellor) of Murcia University and Mayor of Torre Pacheco signed an agreement to study whether it was feasible to establish a museum and residential field-study centre near Dolores de Pacheco beside *Sima de las Palomas* del Cabezo Gordo. The Torre Pacheco Town Council was enthusiastic about developing the site and its environment and has received from the European Union a modest development grant with a view to preserving the hillside around the site. In February 2007 the Murcian Regional government made available eight million euros, later increased to ten, for building the regional **Museum of Palaeontology and Human Evolution** near *Sima de las Palomas* in Torre Pacheco municipality and the foundation stone was laid finally in September 2010; building started in 2011 and although the structure was built in 2012 it awaits being fitted out so that the exhibition halls and laboratories can be up and running – with luck by 2015.

My principal academic interests include prehistoric communities, their habitat, and their evolution, with special reference to the palaeoanthropology, prehistoric archaeology and human palaeoecology of the Old World, and in particular the Iberian Peninsula. I am interested in the application to these matters of strategies, methods, and techniques of the natural sciences via investigations into - especially attempts to refute - working hypotheses about remains from the past, in endeavours to define appropriate models for its interpretation.

My teaching commitments at both undergraduate and postgraduate levels reflect those interests: palaeoeconomic and palaeoecological interpretations of human evolution and Quaternary prehistory; human evolution and biological anthropology in their Pleistocene and Holocene environmental setting; Quaternary environmental studies; human and mammalian osteology and osteometry; multivariate statistical analysis; characterization analyses of materials; field programmes of excavation at Pleistocene and Holocene sites. At Murcia University I have to teach in Spanish. I have also published papers in Catalan and French, and can read German tolerably.

Southeastern Spain is a Mediterranean region with spectacularly abundant palaeoanthropological, palaeoecological, palaeoeconomic, and prehistoric remains from both the Holocene and the Pleistocene. At present I am carrying out fieldwork at two important Murcian sites that straddle the period 250,000-50,000 years ago: *Cueva Negra* and *Sima de las Palomas*. Both provide hominin remains of early *Homo sapiens neanderthalensis*, together with Middle Palaeolithic artefacts and extinct fauna.

Although my own research projects take up most of my time, I have also collaborated with research into Lower Pleistocene hominin remains *Orce*, in Granada, and *Cueva Victoria*, near Cartagena in Murcia, in DGICYT Project *PB-91-0044*, under the leadership of my dear friend, the late Dr. Josep Gibert. We have presented at the 1995 *International Conference on Human Palaeontology*, held at Orce, a published study, together with other colleagues, of early hominin humeri from the Venta Micena site at Orce; this eventually appeared in the scientific journal *Human Evolution* at the end of 1999. I was on the Scientific Committee of the Conference and gave two papers on my work at *Sima de las Palomas* and *Cueva Negra*, as well as guiding an excursion of international scientists around *Sima de las Palomas*. I also collaborate with a Pleistocene project in the Sierra de Quíbas in Murcia, under the leadership of Dr. Miguel Ángel Mancheño, where Late or Middle Pleistocene fauna occurs.

I have also participated in the Murcian Regional Government Project *PSH91-31*, led by Professor Jorge Eiroa of Murcia University's Prehistory and Archaeology Department, as second principal researcher, undertaking osteological analysis of Copper-Age skeletons from northwestern Murcian sites of *Bagil*, excavated by Professor Eiroa, and *Cueva de los Alcores*. Furthermore, I have collaborated with Murcian Regional Government archaeologist Miguel San Nicolás in other analyses of human skeletons from caves he has excavated, including *Cueva de El Milano* and *Cueva de Pajasola*, and in 1995 we published together a 60-page chapter in a volume edited by the late Dr. Bill Waldren (who also studied under Dr. Roe at Oxford) which is called *Ritual, Rites and Religion in Prehistory* (Oxford: Tempus Reparatum, 1995). At Pajasola a former research student and now colleague of mine, Dr. Josefina Zapata did tremendous work, identifying, consolidating and cleaning the hundreds of jumbled human bones, and her doctoral thesis on a major study of a late Roman cemetery population at *Mazarrón* on the southern Murcian coast is in press with *British Archaeological Reports International Series (BAR)*.

When I was at Sydney University I supervised the doctoral theses of Phillip Habgood, who undertook a multivariate statistical analysis of Middle and early Upper Pleistocene hominin skulls which is in press with *British Archaeological Reports International Series (BAR)*, and of American Cheryl Swanson who undertook a similar study on Australian Aboriginal skulls, and I was co-supervisor of Dimitri Anson's thesis which involved characterization studies of Lapita pottery from the Bismarck Archipelago. For over 20 years I have been involved in the examination of doctoral candidates at several universities.

Our laboratories at Murcia University are in the Biology Faculty because Spanish Government regulations which require Physical Anthropology to be located in university Faculties of Biology. So in the Biology Faculty at Murcia University, between 1989 and 1992, a modern, well-equipped Anthropology Research Laboratory and a spacious Teaching Laboratory have been equipped with osteometrical equipment, a Leica MZ-12 "zoom" binocular microscope, a binocular petrographic Zeiss "Jenapol" microscope with photographic accessories, a low-power binocular Olympus microscope with extension arms and photographic accessories, student microscopes, and four microcomputers with digitalizer, plotter, printers, scanners, etc., an oven for drying materials, racks and shelving for bone collections, and a growing library of upto date monographs. A new Tata 7-seater 4-wheel drive vehicle was acquired in November 2005 by the Physical Anthropology Subdepartment for fieldwork, thanks to a special grant from Murcia University for infrastructure. The Faculty Library has also been expanded with textbooks, monographs and a dozen international journals of Physical Anthropology and Quaternary Studies.

Our research enjoys a close relationship with scientists in other university departments, especially the Prehistory and Archaeology Department, the Department of Analytical Chemistry, the Botany Department, the Department of Geology and Soil Science, and the Veterinary Faculty's Veterinary Hospital CAT scanning unit. Comprising physical anthropologists, archaeologists, geologists and analytical chemists, an official university Research Group on "Quaternary technology, anthropology and ecology" was established at Murcia University, under my direction from 1992 to 2013, which has both local colleagues and external collaborators (officially-recognized as such by Murcia University) who are attached to other institutions (Barcelona University; Cartagena Polytechnic University; Instituto de Patrimonio Histórico of the Murcian regional administration, etc.). This Research Group is merging on January 1st 2013 with another Murcia University Research Group concerned with palaeopalynology and palaeoenvironmental studies directed by Dr José Carrión García, Professor of Evolutionary Botany. The new entity will be called the "Quaternary Palaeoecology, Palaeoanthropology and Technology" Research Group. Dr Carrión is an editor of *Quaternary Science Reviews* and he will head the new group officially, though within it the two former groups will each retain de facto autonomy and elect their own separate coordinators for their respective spheres of research interests and activities.

I am also interested in developing interpretations of Southeastern Spanish palaeodemography in the Mesolithic, Neolithic, Copper and Early Bronze Ages, which take into consideration palaeoeconomic and palaeoenvironmental aspects of settlement. Reconsideration of the evidence suggests population and settlement densities far below the levels which are inferred by some prehistorians whose monographs have received wide circulation in recent years. Palaeoanthropological findings, as well as archaeological evidence, suggest an extremely sparse population indeed between 8,000 and 4,000 years ago in this region, which many prehistorians have considered as one of prehistoric Europe's dynamic growth regions from a standpoint of cultural evolution. I have written a chapter in Spanish for a forthcoming volume on the rock paintings of the Murcian Region which includes a reconsideration of my excavations at the Barranco de los Grajos which I carried out over 35 years ago.

MY WORK

PUBLICATIONS, PRESENTATIONS

A. BOOKS, VOLUMES, MONOGRAPHS

- Forthcoming, educational, popular science: **M.J.Walker**, J.García-Torres, M.Haber Uriarte, A.López-Jiménez, M.V.López-Martínez, J.Martín Lerma, J.Ortega-Rodríguez, T.Rodríguez-Estrella, *Cómo se excavan los más antiguos yacimientos humanos del sudeste español, un viaje lleno de sorpresas arqueológicas y antropológicas (Libro compilado por el equipo técnico dirigido por Michael J. Walker de excavación en los yacimientos de la Cueva Negra del Estrecho del Río Quípar en Caravaca de la Cruz, Murcia, España, y la Sima de las Palomas del Cabezo Gordo en Torre Pacheco, Murcia, España)*. MUPANTQUAT, Murcian Association for the Study of Palaeoanthropology and the Quaternary. The English edition will be published by Oxbow Books: *How the earliest cave-folk of south-east Spain were dug up, A journey of archaeological and anthropological surprises (A book compiled by the team directed by Michael J. Walker at the sites of Cueva Negra del Estrecho del Río Quípar, Caravaca de la Cruz, Murcia, Spain, and Sima de las Palomas del Cabezo Gordo, Torre Pacheco, Murcia, Spain)*
- 2013 **M.J.Walker**. Guest Editor, Rethinking Palaeolithic Chronologies in Europe and the Circum-Mediterranean Region, of *Quaternary International* volume 294 part 2 (ISSN-1040-6182)
- 2001 **M.J.Walker**. pp. 1-56 and 116-128; **M.J.Walker**, A.Legaz López, M.López Martínez, pp. 59-115, *Europeos Arcaicos y Neanderthales. Proyecto HOMO, Hominidos, Tecnología y Medio Ambiente en el Pleistoceno Medio y Superior Inicial*. (Exhibition Catalogue). Murcia, Museo de la Ciencia y del Agua del Excm^o Ayt^o de Murcia, 128 pp. (ISBN 848927990X)
- 1999 **M.J.Walker**. Guest Editor of monographic issue devoted to Iberian Peninsula palaeoanthropology of *Human Evolution* volume 14 parts 1-2 (ISSN 0393-9375). Florence, Angelo Pontecorboli Editore, 160 pp.
- 1992 J.Gibert, D.Campillo, E.García-Olivares, A.Malgosa, B.Martínez, P.Palmqvist, F.Sánchez, **M.J.Walker** (eds): *Presencia humana de Granada y Murcia: Proyecto Cueva Victoria-Orce (1988-1992)*. Orce, Ayuntamiento de Orce, Museo de Prehistoria y Paleontología "J.Gibert", (with collaboration from the Caixa de Catalunya and the Excm^o Diputació de Barcelona), 503 pp. (depósito legal GR-1277-1992; ISBN 8460444090)
- 1988 **M.J.Walker**. *Ensayo de caracterización de poblaciones del Sureste español, 3.000 a 1.500 a.J.C.* Murcia, Universidad de Murcia, 160 pp. (revised Spanish edition, translated by the author) (ISBN 8476840861)
- 1985 **M.J.Walker**. *Characterising local southeastern Spanish populations of 3,000-1,500 B.C.* Oxford, British Archaeological Reports, "BAR International Series", S-263, 128 pp (ISBN 0860543358)

SABBATICAL LEAVE

- 1994 Oxford University, October 1- December 11 1994, at the invitation of its Director, Dr.D.A. Roe, to collaborate in research at the Oxford University "Donald Baden-Powell Quaternary Research Centre", following my designation by the Committee for Archaeology of the University of Oxford as Senior Visiting Research Fellow and by St. Cross College, Oxford, as its Visiting Fellow.
- 1986 At Autonomous University of Madrid (Departamento de Antropología y Genética, Facultad de Ciencias). On "leave-without-pay from Sydney University; as visiting Professor funded by Spanish government (see above).
- 1980 At Murcia, collaborating in field project with Murcia University faculty member Dr.P.A. Lillo Carpio in the excavation of El Prado. Sabbatical leave funded by University of Sydney.

CONFERENCES, CONGRESSES, SEMINARS, INVITED LECTURES

A. AS ORGANIZER

- 2010 Co-organizer (with Prof.T.G.F.Higham, Oxford University) *Rethinking Palaeolithic Chronologies in Europe and the Circum-Mediterranean Region* Regular Session (September 2) of the European Association of Archaeologists XVI Annual Meeting, The Hague, September 1-5 2010, at the Rijkskonservatorium, The Hague.
- Content: The Palaeolithic archaeology of Europe and the circum-Mediterranean region has undergone remarkable changes over the last 20 years thanks to notable advances in field and laboratory techniques and an ever-increasingly complex range of multidisciplinary research methodologies and scientific applications. This new knowledge often challenges cherished interpretations about Palaeolithic cultural categories or sequences and chronological trajectories, calling into question the relevance of much traditional

wisdom about the archaeology of our Pleistocene fore-runners. The session is conceived as a forum where participants debate the significance of recent advances in Palaeolithic research (prior to the onset of the Holocene) in Europe and the circum-Mediterranean region, and re-think the place of Palaeolithic studies within a twenty-first century disciplinary framework for archaeology in general. Programme:

- 1) T. F.G.Higham "Radiocarbon dating the earliest Aurignacian in western Europe"
- (2) D.C.W.Sanderson, R.A.Housley, D.Mark "Opportunities and Challenges in Developing Multi-technique Chronologies for Human Evolution and Dispersal"
- (3) J.Zilhão "New chronological evidence for Middle and Upper Pleistocene archaeological sites in the Almonda karstic system (Torres Novas, Portugal)"
- (4) E.Boaretto, N.R.Rebollo, S.Weiner, F.Brock, L.Meignen, A.Belfer-Cohen, O.Bar-Yosef "Anatomically modern humans migrated out of Africa almost 50,000 years ago: Radiocarbon dating of the MP-UP transition in Kebara Cave, Israel"
- (5) G.A.Clark, "Advances in interdisciplinary research in the West Asian Paleolithic"
- (6) N.Rolland "The Early Pleistocene hominid dispersals out of Africa: Two outstanding issues, with special reference to the circum-Mediterranean region"
- (7) F.d'Errico, W.E.Banks, M.F.Sánchez-Goñi, M.Kageyama "Palaeolithic chronologies and population dynamics in changing environments. Data and research strategies"
- (8) B.Weninger, O.Jöris "The Greenland GISP2 Glaciochemical Record: Rapid Climate Change during the Upper Palaeolithic"
- (9) D.Richter, H.Dibble, P.Goldberg, J.J.Hublin, J.Jaubert, S.McPherron D.Sandgathe, M.Soressi, K.Trebault, A.Turq "Chronometric data for the Late Middle Palaeolithic of south-western France and the chronostratigraphic position of Mousterian technocomplexes"

2000 Organizer: International Symposium in Honour of Professor Phillip Tobias, F.R.S. The Iberian Peninsula and Human Evolution. Its full Spanish title was "Coloquio-Taller Internacional: La Península Ibérica y la Evolución Humana. Un Simposio en Honor del Prof. Dr. Phillip V. Tobias, F.R.S. Murcia, del 6 al 10 de Diciembre de 2000". Held at Murcia University, December 6-10 2000. Programme:

- (1) C.J.Cela Conde: "¿Como era de torpe el Homo habilis? Las Dificultades para una Taxonomía adecuada de los Homínidos del Plioceno"
- (2) D.Turbón: "El ADN antiguo en la Península Ibérica"
- (3) J.Gibert Clots: "La Cueva Victoria del Llano de Beal de Cartagena, Murcia"
- (4) E.García Olivares: "Paleontología Molecular: Estudio de Biomoléculas en Fósiles"
- (5) D.A.Roe: "The Iberian Peninsula in the Palaeolithic: An Outsider's View"
- (6) P.V.Tobias: "The role of Water in the Extra-African Dispersal of Humanity, with Special Reference to the Peopling of the Iberian Peninsula."
- (7) G.A.Clark: "Modern Human Origins Research: Putting Iberia in a Global Context"
- (8) A.V.Lombardi: "Dental Anthropology and Neanderthal Man"
- (9) J.E.Egocheaga: "Avance de los Resultados del Estudio paleoantropológico de los Fósiles del Hombre de Sidrón"
- (10) J.L.Arsuaga, I.Martínez: "El Origen de la Mente"
- (11) J.Zilhão, C.Duarte: "The Lagar Velho Child: Burial, Anatomy and Implications for Modern Human Origins in Iberia"
- (12) M.J.Walker: "El Hombre de Neanderthal en Murcia: La Cueva Negra del Estrecho del Quípar y la Sima de las Palomas del Cabezo Gordo"

Official excursions to (1) Sima de las Palomas del Cabezo Gordo de Dolores de Pacheco (Torre Pacheco, Murcia) y la Cueva Victoria del Llano del Beal (Cartagena, Murcia) and (2) Cueva Negra del Estrecho del Río Quípar de La Encarnación (Caravaca de la Cruz, Murcia). Financial and material support was provided by the Comunidad Autónoma de la Región de Murcia, CajaMurcia, Universidad de Murcia, Fundación Seneca, Fundación HEFAME, Excmos. Aytos. de Caravaca and Torre Pacheco.

1996 Director of Murcia University "Universidad del Mar" week-long seminar and summer school on La Evolución Humana y la Paleoantropología, Torre Pacheco, Murcia, 23-27 Septiembre 1996. 6 presentation lectures were given by 6 senior professors and researchers from different Spanish institutions (Murcia, Madrid, Barcelona, Palma de Mallorca) and 6 workshops were also run in which a further 4 junior researchers gave presentations, before an audience of 40 enrolled students.

1990 Director of the Jornadas de Ecotecnología at Murcia University. I organized a week-long series of talks by Professor Peter M. Allen and his colleague Dr. Francisco Pérez-Trejo, both of the International Ecotechnology Research Centre of the Cranfield University, a postgraduate university in the United Kingdom. The Centre was set up with funds from the Honda Foundation in 1988, prior to which date Professor Allen had collaborated with Nobel Prize-Winner Ilya Prigogine During 18 years at the Free University of Brussels (Belgium). Funding for the Jornadas de Ecotecnología was provided by the British Council and the Caja de Ahorros del Mediterráneo.

B. AS MEMBER OF SCIENTIFIC COMMITTEE

2001 Member of the Scientific Committee of the Reunión Bial de la Real Sociedad Española de Historia Natural (Murcia, Universidad de Murcia, September 4-8 2001).

1995 Member of the Scientific Committee of the International Congress on Human Palaeontology: Hominids and their Environment in the European Lower and Middle Pleistocene (Orce, Granada, Spain, September 4-7 1995).

C. AS SESSION CHAIRPERSON

2004 El Paleolítico, XV Jornadas de Patrimonio Histórico y Arqueología Regional (Murcia, Museo Arqueológico de Murcia, Nov. 24 – Dec. 2, 2004).

2003 El Paleolítico, XIV Jornadas de Patrimonio Histórico y Arqueología Regional (Murcia, Colegio Oficial de Arquitectos, Nov. 17-21 2003).

2002 El Paleolítico, XIII Jornadas de Patrimonio Histórico y Arqueología Regional (Murcia, Centro Cultural "Las Claras" de CajaMurcia, Nov. 5-8 2002).

2001 El Paleolítico, XII Jornadas de Patrimonio Histórico y Arqueología Regional (Murcia, Centro Cultural "Las Claras" de CajaMurcia, May 22-25 2001).

2000 El Paleolítico, XI Jornadas de Patrimonio Histórico y Arqueología Regional (Murcia, Salón de Actos de CajaMurcia, May 2-5 2000).

1999 El Paleolítico, X Jornadas de Arqueología Regional (Murcia, Salón de Actos de CajaMurcia, May 11-14 1999).

1998 El Paleolítico, IX Jornadas de Arqueología Regional (Murcia, Consejería de Política Territorial y Obras Públicas, May 5-8 1998).

1997 El Paleolítico, VIII Jornadas de Arqueología Regional (Mula, Museo Arqueológico Municipal "Ementerio Cuadrado" and Murcia, Colegio Oficial de Arquitectos, May 13-16 1997).

1996 El Paleolítico, VII Jornadas de Arqueología Regional (Lorca, Museo Arqueológico Municipal y Murcia, Colegio Oficial de Arquitectos, May 14-17 1996).

1992 Poblaciones del Paleolítico Superior al Neolítico, IIIrd International Congress of Human Palaeontology (Jerusalem, Hebrew University of Jerusalem).

D. AS PARTICIPANT (speaker/presenter, unless otherwise stated). (FT) full text published. (A) published abstract only. NP not in print. *pdf available on request.

2013 55th Annual Meeting of the Hugo Obermaier Society for Quaternary Research and Archaeology of the Stone Age 55 Jahrestagung Hugo Obermaier-Gesellschaft für Erforschung des Eiszeitalters und der Steinzeit e.V. April 2-6 2013, at the Naturhistorischesmuseum, Vienna, Austria, invited talk **M.J.Walker**, J.Ortega Rodríguez, K.Parmová, C.P.E.Zollikofer, M.S.Ponce de León, E.Trinkaus: "The Neanderthal skeletons from Sima de las Palomas, Murcia, SE Spain" NP (Unlike the poster, next item, no abstract was published because the invitation to give the talk was made by the President of the Society, barely a month before the meeting, after the poster had been submitted and accepted, and there was not enough time to include an abstract of the talk in the volume of Abstracts which was already with the printers when the invitation was made.)

- 1964 Annual Conference of the British Association for the Advancement of Science, August 1964, held at the University of Aberdeen, Aberdeen, U.K., received First Prize for the Endeavour Prize Essay; **M.J.Walker:** "The mechanism of muscular contraction" Publication: (FT) see *B. ARTICLES: B-1. ARTICLES IN SIGNIFICANT JOURNALS* (1965)

DOCTORAL THESES SUPERVISED

- At present, I am supervising doctoral theses of (1) Antonio López Jiménez, who is investigating Quaternary rodent biostratigraphy in Murcian middle Pleistocene sediments at Cueva Negra del Estrecho del Río Quípar, and (2) Jon Ortega Rodríguez, who is investigating fossil hominin remains from the Sima de las Palomas del Cabezo Gordo.
- Thesis of Dr.J.Zapata Crespo: "Restos óseos de necrópolis tardorromanas del Puerto de Mazarrón, Murcia," Ph.D. awarded by the University of Murcia in 2003 to Josefa Zapata Crespo (later published: J.Zapata Crespo, *Restos Óseos de Necrópolis Tardorromanas del Puerto de Mazarrón, Murcia*. Oxford: British Archaeological Reports International Series, BAR S-1272, vi+251 pp., ISBN 1841713538, 2004).
- Thesis of Dr.P.J.Habgood: "A morphometric investigation into the origin(s) of anatomically modern humans". Ph.D. awarded by the University of Sydney in 1988 to Commonwealth Scholar P.J.Habgood of New South Wales, Australia (later published: P.J.Habgood, *A Morphometric Investigation into the Origin(s) of Anatomically Modern Humans*, Oxford: British Archaeological Reports International Series, BAR S-1176, xii+331 pp., ISBN 1841713449, 2003).
- Thesis of Dr.C.Swanson: "The importance of the face in Aboriginal craniology: Towards a new understanding of its form and function". Ph.D. awarded by the University of Sydney in 1983 to this University of Sydney Scholar of United States citizenship, Ms. C. Swanson.
- Co-supervision (with Dr.P.J.White) of thesis of Dr.D.Anson: "Lapita pottery of the Bismarck Archipelago". Ph.D. awarded by the University of Sydney in 1984 to Commonwealth Scholar D. Anson of New South Wales, Australia.

ALL FUNDING: RESEARCH AND TRAVEL, OTHER FUNDING, FELLOWSHIPS, SCHOLARSHIPS, PERSONAL AWARDS, PRIZES, etc.

- 2013 MUPANTQUAT Field School for Palaeoanthropology and Quaternary Prehistory of the Murcian Region
- 2012 Field School for Palaeoanthropology and Quaternary Prehistory of the Murcian Region
Murcia University research grant (1,000 euros) for scanning Neanderthal skeletal remains at the Veterinary Faculty Hospital scanning unit.
- 2011 Field School for Palaeoanthropology and Quaternary Prehistory of the Murcian Region
Travel funding from the Alfred Schultz Foundation at Zurich University Anthropology Institute to give a seminar at the Institute and collaborate with colleagues.
- 2010 Field School for Palaeoanthropology and Quaternary Prehistory of the Murcian Region
- 2009 Murcia University Archaeology Research grant of 25,000 euros for excavation at Cueva Negra del Estrecho del Río Quípar and Sima de las Palomas del Cabezo Gordo.
- 2007 Fundación Séneca (Murcian regional government funding agency) of 30,000 euros for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2006 Spanish Government 12-month research grant (Project CGL2005-02410) of 6,000 euros for 2006 from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2006 Murcian regional authority excavation grant of 6,000 euros, from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 2006 Support for the excavation at Sima de las Palomas del Cabezo Gordo from Torre Pacheco city council which paid for all meals taken by the team of twenty people there during three weeks in 2006.
- 2006 Murcian regional authority conference travel grant of 900 euros, from Fundación Séneca, Comunidad Autónoma de la Región de Murcia, Consejería de Educación y Cultura, to enable Michael J. Walker to present a paper (based on findings from Cueva Negra) at the XV Congress of the International Union of Prehistoric and Protohistoric Sciences held at Lisbon.
- 2005 Spanish Government 3-year research grant (Project BOS2002-02375) of 57,500 euros for 2003/2004/2005, from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2004 Spanish Government 3-year research grant (Project BOS2002-02375) of 57,500 euros for 2003/2004/2005, from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2004 Murcian regional authority excavation grant of 9,000 euros, (Expediente CEC/DGC/SPH 081/2004) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 2004 Travel grant (6,000 euros from Torre Pacheco city council) for Michael J. Walker to visit and reinforce cooperative links with national museums at Vienna, Prague, Bratislava, Budapest, Ljubljana and Zagreb, in connection with the proposal for the Darwin Museum of Human Evolution beside Sima de las Palomas del Cabezo Gordo near Torre Pacheco.
- 2003 Spanish Government 3-year research grant (Project BOS2002-02375) of 57,500 euros for 2003/2004/2005, from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2003 Murcian regional authority excavation grant of 9,000 euros, (Expediente CEC/DGC/SPH 045/2003) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 2003 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme (this has nowadays fallen to a trivial amount of around 900 euros a year).
- 2003 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university (this has nowadays fallen to a trivial amount of around 350 euros a year).
- 2002 Murcian regional authority excavation grant of 6,000 euros, (Expediente CEC/DGC/SPH Expediente CEC/DGC/SPH 023/2002) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 2002 Spanish Government 3-year research grant (Project PB98-0405) of 24,970 euros for 2000/2001/2002, from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2002 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme (this has nowadays fallen to a trivial amount of around 900 euros a year).
- 2002 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university (this has nowadays fallen to a trivial amount of around 350 euros a year).
- 2001 Spanish Government 3-year research grant (Project PB98-0405) of 24,970 euros for 2000/2001/2002, from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2001 Murcian regional authority excavation grant of 6,887 euros, (Expediente CTC/DGC/SPH 063/2001) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Sima de las Palomas del Cabezo Gordo.
- 2001 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).

- 2001 European Commission "Culture 2000" Programme grant (2000-0820CLCA1A) of 150,000 euros from Brussels, together with another 150,000 euros contributed by participating institutions (namely, Murcia city council and its Science and Water Resources Museum, the Vienna Natural History Museum, the Oxford University Natural History Museum, the "Dr.M.Crusafont" Paleontological Museum of Barcelona at Sabadell, and Torre Pacheco city council) -300,000 euros in all- for the travelling exhibition entitled "The Homo project: Hominids, Technology and Environment in the Middle and early Upper Pleistocene", of which Michael J.Walker was prime-mover and Scientific Director ("comisario científico"), about Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar. The exhibition has been displayed at the collaborating institutions between 2001 and 2005 (as well as several other places in Spain: Murcia University General Library, San Sebastián's Science Museum, Logroño, Abarán, etc.).
- 2001 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme (this recently dropped to a trivial amount of around 900 euros a year).
- 2001 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university (this recently dropped to a trivial amount of around 350 euros a year).
- 2001 Palaeoanthropologist in a research team with a 3-year research grant to P.I. Dr.M.A.Mancheño from Fundación Seneca, Consejería de Educación y Cultura, Comunidad Autónoma de la Región de Murcia (after prior scrutiny by and approval from the Interministerial Agencia Nacional de Evaluación y Prospectiva of the Spanish Government), for field research at a Lower Pleistocene palaeontological station in the Sierra de Quibás in northeastern Murcia.
- 2000 Spanish Government 3-year research grant (Project PB98-0405) of 24,970 euros for 2000/2001/2002, from Dirección General de Investigación, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 2000 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).
- 2000 Murcian regional authority excavation grant of 800,000 pesetas i.e. 4,790 euros, (Expediente CTC/DGC/IPH/SAR 012/2000) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 2000 Grants from the Murcian regional authority Consejería de Educación (2,000,000 pesetas) and Fundación Seneca (500,000 pesetas), Murcia University (250,000 pesetas) and Fundación Hefame (125,000 pesetas) -3,750,000 pesetas in all i.e. 19,500 euros- for the International Colloquium and Workshop "The Iberian Peninsula and Human Evolution", A Symposium in Honour of Professor Phillip V. Tobias, F.R.S." organized by Michael J. Walker.
- 2000 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme
- 2000 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university
- 1999 Murcian regional authority excavation grant of 4,790 euros, (Expediente CCE/DGC/IPH/SAR 108/1999) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 1999 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).
- 1999 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.
- 1999 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university.
- 1998 Murcian regional authority excavation grant of 1,200,000 pesetas i.e. 7,186 euros, (Expediente CCE/DGC/IPH/SAR 0/1998) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Sima de las Palomas del Cabezo Gordo.
- 1998 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).
- 1998 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.
- 1998 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university
- 1997 Murcian regional authority excavation grant of 800,000 pesetas i.e. 4,790 euros, (Expediente CCE/DGC/IPH/SAR /1997) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.
- 1997 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).
- 1997 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.
- 1997 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university.
- 1996 Spanish Government 3-year research grant (Project PB92-0971) of 4,170,000 pesetas i.e. 24,970 euros for the period from June 1993 to June 1996, from Sub-Dirección General de Investigación, Dirección General Interministerial de Ciencia y Técnica, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 1996 Murcian regional authority grant of 1,000,000 pesetas i.e. 6,000 euros, (Expediente CCE/DGC/IPH/SAR 011/1996) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Sima de las Palomas del Cabezo Gordo (3,000 euros) and cleaning and restoration of the fossil CG-1 Neanderthal facial skeleton from the site (3,000 euros).
- 1996 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).
- 1996 Integrated Anglo-Spanish Action (HB-1995-002) paid for by the U.K. Government's British Council and the Spanish Government's Ministry of Education and Science, to enable scientific exchanges between Dr. M.J.Walker of Murcia University and Dr. D.A. Roe of Oxford University, and their respective doctoral students I. Serrano and J. Mitchell, of 14 days duration per person (Walker and Serrano at Oxford; Roe and Mitchell at Oxford): project title "Comportamiento paleoantropológico y Paleoeología de homínidos en el Sudeste de la Península Ibérica".
- 1996 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.
- 1996 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university
- 1995 Spanish Government 3-year research grant (Project PB92-0971) of 4,170,000 pesetas i.e. 24,970 euros for the period from June 1993 to June 1996, from Sub-Dirección General de Investigación, Dirección General Interministerial de Ciencia y Técnica, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 1995 Murcian regional authority excavation grant of 900,000 pesetas i.e. 5,389 euros, (Expediente CCE/DGC/IPH/SAR /1995) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Sima de las Palomas del Cabezo Gordo.
- 1995 Integrated Anglo-Spanish Action (HB1995-002) of 1,000,000 pesetas (i.e. 6,000 euros) paid for by the U.K. Government's British Council and the Spanish Government's Ministry of Education and Science, to enable scientific exchanges relating to Project PB92-0971, between Dr. M.J.Walker of Murcia University and Dr. D.A. Roe of Oxford University (with their respective doctoral students I. Serrano and J. Mitchell), of 14 days duration per person (Walker and Serrano at Oxford; Roe and Mitchell at Oxford): Action title "Comportamiento paleoantropológico y Paleoeología de homínidos en el Sudeste de la Península Ibérica".
- 1995 Earthwatch Institute (Project "Searching for Neanderthal Man in S.E. Spain") support for prehistoric and palaeoanthropological research at Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar (Murcia).
- 1995 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.
- 1995 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university
- 1994 Spanish Government 3-year research grant (Project PB92-0971) of 4,170,000 pesetas i.e. 24,970 euros for the period from June 1993 to June 1996, from Sub-Dirección General de Investigación, Dirección General Interministerial de Ciencia y Técnica, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 1994 Murcian regional authority 12-month research grant PSH93-52 of 1,000,000 pesetas (i.e. 6,000 euros) from Dirección General de Educación y Universidad, Consejería de Educación y Cultura, Comunidad Autónoma de la Región de Murcia (after prior scrutiny by and approval from the Interministerial Agencia Nacional de Evaluación y Prospectiva of the Spanish Government) for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.
- 1994 Murcian regional authority excavation grant of 1,200,000 pesetas i.e. 7,186 euros (Expediente CCE/DGC/IPH/SAR /1995) from Dirección General de Cultura, Consejería de Cultura y Educación de la Comunidad Autónoma de la Región de Murcia, for excavation at Sima de las Palomas del Cabezo Gordo.
- 1994 Oxford University Visiting Senior Research Fellowship in Archaeology, with received supplementary assistance for the short sabbatical visits to Oxford was as follows: (1) community chest of Murcia savings bank Cajamurcia 200.000 pesetas, (2) Murcia University office of the British Council 80.000 pesetas, (3) Fundación Privada Estebán Romero de la Universidad de Murcia 50.000 pesetas, (4) Visiting Fellowship and free luncheons at St. Cross College, Oxford; (5) limited free luncheon and dinners at The Queen's College high table, Oxford.

1994 University Research Group E003/01 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university.

1994 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.

1993 Spanish Government 3-year research grant (Project PB92-0971) of 4,170,000 pesetas i.e. 24,970 euros for the period from June 1993 to June 1996, from Sub-Dirección General de Investigación, Dirección General Interministerial de Ciencia y Técnica, Ministerio de Educación y Ciencia, for research at the Pleistocene sites in Murcia (Spain) with hominin remains and Palaeolithic artefacts of Sima de las Palomas del Cabezo Gordo and Cueva Negra del Estrecho del Río Quípar.

1993 Murcian regional authority excavation grant of 1,000,000 pesetas i.e. 6,000 euros. (Ref. Al/ml of 09-06-1993, nº. 4212) from Dirección General de Cultura, Consejería de Cultura, Educación y Turismo de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.

1993 Integrated Anglo-Spanish Action (HB1993-0114) of 1,000,000 pesetas (i.e. 6,000 euros) paid for by the U.K. Government's British Council and the Spanish Government's Ministry of Education and Science, to enable scientific exchanges relating to Project PB92-0971, between Dr. M.J.Walker of Murcia University with Dr. J.Gibert of Barcelona's Palaeontological Institute at Sabadell, and Dr.D.A.Roe of Oxford University with Dr.S.Gamble of Southampton University and Dr.N.Moloney of University College London, Action title: "Comportamiento paleoantropológico y Paleocología de homínidos en el Sudeste de la Península Ibérica".

1993 University Research Group E03/0011 allocation from Murcia University funds assigned by the European Commission for research infrastructure at the university.

1993 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.

1992 Murcian regional authority excavation grant of 550,000 pesetas i.e. 3,293 euros. (Ref. IB/ml 188/81 of 27-05-1992, nº. 3072) from Dirección General de Cultura, Consejería de Cultura, Educación y Turismo de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.

1992 Research Grant to excavate Sima de las Palomas del Cabezo Gordo from Deputy Vice-Chancellor for Research, Murcia University.

1992 Research allocation to investigate copper age skeletons from Moratalla-Caravaca (Murcia) made from Murcian regional authority 12-month research grant PSH91-31 to P.I. Dr.J.Eiroa from Dirección General de Educación y Universidad, Consejería de Educación y Cultura, Comunidad Autónoma de la Región de Murcia (after prior scrutiny by and approval from the Interministerial Agencia Nacional de Evaluación y Prospectiva of the Spanish Government), for research into neolithic and copper age sites in northwestern Murcia.

1992 Research Grant to investigate Roman skeletal remains from Mazarrón from Centro Regional de Arqueología, Dirección General de Cultura, Consejería de Cultura, Educación y Turismo, Comunidad Autónoma de la Región de Murcia.

1992 Special Library Grant for establishment of new Subdepartment of Physical Anthropology from Murcia University Deputy Vice-Chancellor for Coordination.

1992 University Research Allocation to Subdepartment of Physical Anthropology via Departmental assignment.

1992 University Teaching Allocation to Subdepartment of Physical Anthropology for infrastructure for established undergraduate teaching programme.

1992 Research infrastructure allocation for purchase of four microcomputers and printers for the 4 members of Murcia University Research Group E-03/0011, from Murcia University funds assigned by the European Commission for research infrastructure at the university.

1992 Conference Travel Grant to attend Third International Congress of Human Palaeontology in Israel from "Estebán Romero Foundation" of Murcia University.

1992 Conference Travel Grant from Institute for the Study of Man (USA) to attend Symposium on the Mitochondrial Eve Debate and the Origin of Modern Humans at Cortona, Italy.

1991 Murcian regional authority excavation grant of 600,000 pesetas i.e. 3,593 euros (Ref. IB/ml) from Dirección General de Cultura, Consejería de Cultura, Educación y Turismo de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.

1991 Grant for visiting lecturer, from Murcia University's Vicerrectorado de Investigación: Dr. T.Holden who addressed the Anthropology and Ecology of the Quaternary Research Group on palaeonutritional research into mummies from northern Chile.

1991 Research assignment from Departmental research allocation from Murcia University.

1991 University Extraordinary Infrastructure Research Grant, under joint Ministry-University programme for funding deficient areas, for Murcia University Library acquisitions in Physical Anthropology.

1990 Murcian regional authority excavation grant of 600,000 pesetas i.e. 3,593 euros (Ref. nº. 2561 of 04-06-91) from Dirección General de Cultura, Consejería de Cultura, Educación y Turismo de la Comunidad Autónoma de la Región de Murcia, for excavation at Cueva Negra del Estrecho del Río Quípar.

1990 Travel grants to attend World Archaeological Congress in Venezuela from (1) Spanish Ministry of Foreign Affairs "Agencia de Cooperación Internacional y con Ibero-américa" and (2) from Murcia University's Vicerrectorado de Investigación.

1990 Grants-in-aid of conference organized by me at Murcia University, "Jornadas de Ecotecología", from (1) British Council and (2) Caja de Ahorros del Mediterráneo.

1989 Spanish Ministry of Education and Science infrastructural support grant for professors appointed under the "PROPIO Programme".

1989 Murcia University infrastructure grant for establishing and furnishing the Physical Anthropology research laboratory

1988 Research Grant, Australian Research Grants Scheme, Department of Science and Technology of the Australian Government, to undertake prehistoric fieldwork in southeastern Spain.

1988 Research Grant and facilities, Australian Institute of Nuclear Science and Engineering, Lucas Heights, to undertake elemental characterization studies of prehistoric pottery from El Prado.

1987 Overseas Conference Travel Grant, University of Sydney: to attend the Second Symposium on Upper Palaeolithic, Mesolithic and Neolithic Populations of Europe and the Mediterranean Basin, Tel-Aviv University, Sept. 6-10, 1987.

1986 Visiting professorial sabbatical 12-month fellowship from the Comisión Asesora de Investigación Científica y Técnica of the Ministry of Education and Science of the Spanish Government, to collaborate in teaching and research programmes in Anthropology at the Universidad Autónoma de Madrid.

1985 Special Project Grant, Deputy Vice-Chancellor's for Research, University of Sydney, and a research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain).

1984 Research Grant, Australian Research Grants Scheme, Department of Science and Technology of the Australian Government, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain).

1984 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain)..

1983 Research Grant, Australian Research Grants Scheme, Department of Science and Technology of the Australian Government, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain).

1983 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain).

1982 Travel Grant, Dept. of Foreign Affairs of the Australian Government: to attend the XVI Congreso Nacional de Arqueología in Spain.

1982 Special Grant, Vice-Chancellor's Fund, University of Sydney: to attend the XVI Congreso Nacional de Arqueología in Spain

1982 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological research in southeastern Spain.

1981 Financial Assistance from the Departamento de Relaciones Exteriores of the Mexican Government: to attend the Tenth Congress of the International Union of Prehistoric and Protohistoric Sciences, Oct. 19-24, 1981, México City.

1981 Overseas Conference Travel Grant, University of Sydney: to attend the Tenth Congress of the International Union of Prehistoric and Protohistoric Sciences, Oct. 19-24, 1981, México City.

1981 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological research in southeastern Spain.

1980 Research Grant, Australian Research Grants Scheme, Department of Science and Technology of the Australian Government, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain).

1980 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological excavations at El Prado (Jumilla, Murcia, Spain).

1979 Research Grant, National Geographic Society (Grant No. 2107, "For the archaeological excavation of caves near Jumilla, Yecla and Villena in southeastern Spain").

1979 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological field research in southeastern Spain.

1979 Computing Allocation, Computing Centre, Sydney University: to undertake computing.

1978 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological field research in southeastern Spain.

1978 Computing Allocation, Computing Centre, Sydney University: to undertake computing.

1977 Research Grant, Australian Research Grants Scheme, Department of Science and Technology of the Australian Government, to undertake archaeological fieldwork in Jordan.

- 1977 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological field research in Jordan and southeastern Spain.
- 1977 Computing Allocation, Computing Centre, Sydney University, to undertake computing.
- 1976 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological field research in Jordan.
- 1976 Overseas Conference Travel Grant, University of Sydney: to attend the Ninth Congress of the International Union of Prehistoric and Protohistoric Sciences, Nice, Sept. 13-18, 1976.
- 1976 Computing Allocation, Computing Centre, Sydney University: to undertake computing.
- 1975 Research Grant, Myer Foundation of Melbourne (Australia-SE. Asia Cooperation Programme), to undertake archaeological field research in Indonesia.
- 1975 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological field research in Indonesia.
- 1975 Overseas Conference Travel Grant, University of Sydney: to attend II Reunión Nacional del Grupo de Trabajo del Cuaternario in Spain.
- 1975 Grant from Consejo Superior de Investigaciones Científicas, Ministry of Education and Science of the Spanish Government: to attend II Reunión Nacional del Grupo de Trabajo del Cuaternario in Spain.
- 1974 Research assignment from the University Research Grant allocation to the Department of Anthropology, University of Sydney, to undertake archaeological research.
- 1973 Research Grant, The Russell Trust of Glenrothes, Scotland, to excavate a mesolithic site at Shialdaig, Wester Ross (Scotland, U.K.).
- 1973 Research Grant, The Carnegie Trust for the Universities of Scotland, to undertake archaeological field research in southeastern Spain.
- 1973 Computing Allocation: Regional Computing Centre, Edinburgh University, for computing.
- 1972 Gilchrist Travelling Fellowship, Faculty of Medicine, Edinburgh University, to undertake palaeoanthropological and archaeological research in southeastern Spain.
- 1972 Research Grant, The Carnegie Trust for the Universities of Scotland, to undertake archaeological research in southeastern Spain.
- 1972 Computing Allocation: Regional Computing Centre, Edinburgh University, for computing.
- 1971 Gilchrist Travelling Fellowship, Faculty of Medicine, Edinburgh University, to undertake palaeoanthropological research in southeastern Spain.
- 1971 Research Grant, The Carnegie Trust for the Universities of Scotland, to undertake archaeological research in southeastern Spain.
- 1971 Computing Allocation, Regional Computing Centre, Edinburgh University, for computing.
- 1970 Research Grant, National Geographic Society (Grant No. 881, "For continuation of archaeological investigations in southeastern Spain"). 1970 Emslie Horniman Scholarship, Royal Anthropological Institute of Great Britain, to undertake archaeological fieldwork in southeastern Spain.
- 1970 Emslie Horniman Scholarship, Royal Anthropological Institute of Great Britain, to undertake archaeological fieldwork in southeastern Spain.
- 1969 Research Grant, National Geographic Society (Grant No. 779, "To conduct archaeological excavations at the hilltop fortress site of El Castillico southeastern Spain").
- 1969 Research Grant, Randall Maclver Bequest, The Queen's College, Oxford University, to undertake archaeological fieldwork in SE. Spain
- 1967 Randall Maclver Studentship in Archaeology and Unofficial Fellowship, The Queen's College, Oxford University, to conduct research in prehistoric archaeology and palaeoanthropology in southeastern Spain.
- 1967 Research Grant, Randall Maclver Bequest, The Queen's College, Oxford University, to undertake archaeological fieldwork in southeastern Spain.
- 1967 Ophthalmology Prize, Faculty of Medicine, Oxford University.
- 1966 Alan Coltart Scholarship in Anthropology, Exeter College, Oxford University, awarded to me but not taken up.
- 1965 Lady Mabel Smith Travelling Scholarship, Education Department, West Riding County Council, for me to assist Prof.C.Heredia of the Centro Superior de Investigaciones Biológicas, Madrid, conduct research into ribonucleic acid synthesis in yeast.
- 1965 Financial Assistance from Upjohn Pharmaceuticals and Abbott Laboratories, for me to assist Prof.C.Heredia of the Centro Superior de Investigaciones Biológicas, Madrid, conduct research into ribonucleic acid synthesis in yeast. .
- 1963 The Endeavour Prize (First Prize), The British Association for the Advancement of Science, for a paper on the physiology of muscle which was published.
- 1963 Financial Assistance from the Max Planck Gesellschaft, Göttingen, for me to assist Prof.P.Glees of Göttingen University conduct neurophysiological research at the Institut für Neuroanatomie und Experimentelle Histologie der Universität Göttingen and the Max Planck Gesellschaft, into orthocresylphosphate poisoning of the central nervous system.
- 1962 Marrett Archaeological Essay Prize, Oxford University Archaeology Society, for a paper on prehistoric petroglyphs in the British Isles.
- 1959 Oxford University Near Eastern Archaeological Essay Prize, for a paper on the Hittites.

MEMBERSHIP OF SCIENTIFIC AND OTHER BODIES

I am a fellow of:

- Society of Antiquaries of London
