SUMMER 2020 FIELD SESSION @ RIMROCK DRAW ROCKSHELTER

ANTH 408 / 508: Archaeology Field Methods

June 22 through July 31 | 8 credits

UO archaeologist Patrick O'Grady specializes in Paleoamerican studies in the Western United States. Join him for this six-week field experience at Rimrock Draw Rockshelter, a site that has produced Ice Age animal remains along with what may be the oldest stone tool west of the Rocky Mountains. Learn survey, excavation, and mapping techniques and explore the region's natural and cultural history through lively on-site lectures and discussions. In addition, lithic technologist Dan Stueber will teach a week-long course on flintknapping and stone tool technology, and artist-in-residence Nancy Pobanz will guide you deeper into the story of the Great Basin through her research on locally-collected mineral pigments.
